

Handbook 2012

A range of sophisticated access control products. A perfect-fit solution for any environment.

Combined solutions

Mul-T-Lock Combined Solutions.

Perfect integration of secure mechanical locking and sophisticated access control products.

Mul-T-Lock have a long and well-established reputation for effective door locking and our robust and secure cylinders form part of our range of access control products.

We are able to design and build comprehensive security systems for any business or public environment, perfectly blending mechanical locking with state of the art access control products to create a secure, compliant solution throughout the premises. Contact us on 01902 364200 to discuss your needs with one of our door security experts.

Electro Mechanical Locking

- CIO, intelligent mechanical security
- Effortless upgrade to electronic locking
- Fully programmable with audit trail
- Rapid deletion of 'lost' user keys

Standards Compliance

- Conformity to UK and EU standards
- Independently certified for performance
- ISO 9001 quality management systems

Keyless Convenience

- Code-It electronic handle
- Simple, effective keyless locking
- Replaces most standard handles
- Protects against opportunist theft

Offline Access Control

- Smartair wirefree access control
- Quick and easy new or retrofit installation
- Maximum control for multiple user sites
- Fast, simple updates to all locks

Mechanical Security

- Patented locking systems
- High security physical protection
- Advanced master key capability
- Comprehensive range for all applications

Integrated door solutions

Introduction by the MLA's President

I have been a locksmith since leaving school in 1965 at the age of 15 yrs, (that's given my age away) starting an apprenticeship with a long established Locksmith company in Liverpool known as HS Gillespie's. I eventually developed my skills and with the assistance of my wife Linda, I started my own Locksmith Company and we now have branches in St Helens & Liverpool.

In the early days of my career, many locksmiths kept their skills and little secrets they had learnt to themselves and I always thought that was not the right way to go because when they sadly passed away or retired, that knowledge was lost to the next generation. I am aware that there are some areas in Locksmith skills that are highly competitive and I completely understand people not wanting to divulge certain methods they have developed to enhance their particular area of expertise but there are many areas in which certain knowledge should be passed on and the Master Locksmiths Association is the perfect conduit for this to happen.

When I first joined the Master Locksmiths Association, there was a lot of secrecy amongst the membership but times have changed and I have found that there are many highly skilled members in the Association who are keen to pass on their knowledge for the good of the profession to other members and student members who are keen to learn and promote the skills that are required to be a good locksmith.

I strongly believe in the Master Locksmiths Association and what it stands for and I am not alone in wanting to help people secure their future in what I think is one of the best jobs around. I joined the MLA 25 years ago and during that time, I have attended as many regional meetings as possible and I have picked up many little tricks, tips and ideas as well as learning about new products coming into the market place but these meetings have also allowed me to meet many like minded members whose dedication, skill and knowledge are un-surpassed.

I became a regional official with the Northern Region, and was a member of the Board of the Association for 11 years during which time I was National Chairman for 3 years, a post which I enjoyed tremendously and I have now been elected President of the MLA, a position which I am very proud to hold and I am very grateful to the MLA Board for their confidence in choosing me. I have some very hard acts to follow, many distinguished people have been in this position, Tony Clare, Ken Bryan and my predecessor Val Stokes who did a wonderful job as President for 7 years and I would like to thank Val for her tenure and all her efforts to promote the association and what it stands for.

In this handbook you will find a list of the benefits of being a member of the Association, together with technical information on standards, security advice and information of the Chubb Award which is given to a member who has supported the ideals of the profession and the Nigel Rose Bowl award which is given to the highest achiever in the Full Members Exam, both of which are an annual presentation. The handbook also contains a full listing of Trade Division members of the Association who have all been inspected for the areas of expertise they advertise and this listing is an invaluable tool not only for prospective clients, such as Insurance Companies, Police and such like but also for member to member service on a national level. This can prove invaluable to help companies be competitive by prompt service to national contracts and keep costs down but still maintain a good service and a high quality of work.

Gary Eckersall

MLA Overview

The Master Locksmiths Association (MLA) is the leading trade association for the locksmithing industry. A truly not-for-profit organisation promoting the skill and integrity of its approximately 1,400 members, it was established over 50 years ago to set and promote standards of conduct, practice and materials within locksmithing. Recognised as the authoritative body for locksmithing by the police, home office, British Standards Institute (BSI), The Risk Insight, Strategy and Control Authority (RISCAuthority; formally IPCRes, the UK property insurers' technical group) and Building Research Establishment (BRE), the MLA also has a subsidiary company, Sold Secure, which performs certification of security products via manual attack testing.

MLA member companies, who undergo strict vetting (including criminal record checks, regular inspections to ensure quality etc), are able to provide advice based on knowledge and experience, recommend products that are fit for purpose as well as provide professional installation and maintenance services. Details on your nearest MLA approved company can be found in the directory section of this handbook or on our website www.locksmiths.co.uk.

As a City & Guilds approved centre, the MLA also provides training from its purpose built training facility based at the company headquarters in Daventry, consisting of a classroom type environment for theory work and fully equipped workshop for the hands-on practical elements (N.B. due to the content of some courses they may only be open to MLA members). Courses currently include general locksmithing; opening; access control, safe engineering and Auto Locksmithing, with others currently under development. The MLA has been fundamental in the project of developing a nationally recognised qualification for the industry and is working with the sector skills body Skills for Security to progress this into the development of a formal apprenticeship framework.

Overview from the Director of Business Development

Well what a 12 months it's been! Since writing my piece for the last Handbook the MLA has been more than active!

Firstly there was the first International Auto Convention run in conjunction with the European Locksmiths Federation and the Auto Locksmiths Association. As it was the first event of its kind we weren't really sure what to expect, but we certainly couldn't have predicted the roaring success that it was! With over 400 visitors from more than 24 countries, plenty of training, networking and of course exhibitors on hand to highlight the latest developments in the industry it was certainly deemed by those who attended to have been well worth the effort. We look forward to hopefully seeing another association elsewhere in the world take up the mantle and run the next one.

Then there was the development and launch of the association's new web based forum. Whilst the MLA was one of the first associations to have a web forum I think it was fair to say that it was time to update it and so modern phpBB software was introduced to create a 21st century forum. It seems to have worked as with well over 1050 topics already covered in the first 12 months of existence (and more being added each day) it's one of the busiest in the industry! Talking about the 21st Century, nobody can have failed to see the increasing popularity of social media and once again the MLA has been taking full advantage of this with its own Facebook page and twitter feed. It's an excellent way to help promote the association and its members whilst also providing useful information to people. It proved particularly useful for promoting Expo for example and highlighting who was exhibiting and what was going on. We even kept up a tweet commentary on the build days and actual show days too!

Membership benefits have been increased and taken up in droves. Mind you with savings of £6k + to be made on Vauxhall vehicles it's not surprising that they get taken up! In particular we've looked at ways of helping members in their day to day business. This has led to us teaming up with a credit card processing company where there's no need for a terminal (ideal for those who don't take credit card payments very often) as well as a deal for members to gain access to asset finance, as well as being able to offer finance terms to their own customers on certain types of installations.

Training has been progressed with the launch of a couple of new courses. CCTV has proved a popular one as locksmiths look to increase their service offering. Due to popular demand we've also run a couple of Electrical Safety courses where attendees upon passing a short practical at the end of the course get a certificate of competency for connecting to a fused spur.

Training is actually one of the areas that has seen one of the major industry milestones this year. The MLA has a long history of working with the industry skills body Skills for Security, having previously been involved with the development of the National Occupational Standards (NOS) for the Physical Security Sector, but with our drive to legitimise the profession we have pushed to look to develop standards within the locksmithing sector itself. Well after a significant amount of input I'm happy to report that in April 2011 the regulator UKCES approved the locksmiths specific NOS thereby paving the way for further development within the industry. Whilst having been a driving force behind this development, the MLA has cemented its place at the head of the industry by deciding to fund the next 2 steps from the NOS creation which entail the development of a nationally recognised qualification and a formal apprenticeship. The first part has just been completed with the qualification framework having been submitted to the awarding bodies for creation into the nationally recognised qualification itself.

The promotion of MLA licensed locksmiths has of course played a very important role and we've been delighted with the amount of press coverage generated for the association and members. Promotion of approved companies is of course one of the main benefits of membership and as well as this new format handbook and the website (itself undergoing a complete overhaul) then editorial content in various outlets helps raise the profile of MLA licensed locksmiths and the association

alike, whilst helping the end user understand who they should be calling for their security requirements and why. With features in various targeted commercial or special interest journals (e.g. facility management, child-minding, education, house/home magazines, landlord publications etc.) we've also instigated a regular security column which is sent out to all regional newspapers and has been picked up by a large number of them, thereby helping the regional coverage of the association and its members.

And then to round off, just before writing this overview for the new handbook we of course had MLA Expo - the premier locksmithing show in the UK. And what a show it was! There's an overview elsewhere in the handbook so I don't want to steal too much thunder but suffice it to say that it was by all accounts the best Expo yet! A massive thanks to all those involved in exhibiting, providing the training, helping out during the event and of course those visiting.

So to sum up it's been a hectic 12 months but we've got a lot more to do and I look forward to working with the staff, board, members and various industry partners on helping progress the association and look after the industry. With the planned apprenticeship framework development, new MLA database and website and of course new and improved training courses we've certainly got plenty to be getting on with!

Yours Sincerely

Dr Steffan George
*Director of Business Development,
 MLA Group*

NEW
STANDALONE
TECHNOLOGY

Box Clever!

The Unique new **Solar Smart**,
standalone **outdoor, wireless**,
GPRS surveillance camera

Xtern-Cam® is a rugged outdoor standalone surveillance camera with inbuilt GPRS modem, digital image recording function, integrated night vision and inbuilt Solar Panel to give extraordinary long battery life.

- Unique Solar Smart® "standalone" outdoor wireless (GPRS) surveillance camera.
- Operates indefinitely, taking up to 380 photos/night using its Solar Powered battery.
- "Set & Forget" operation.
- Inbuilt invisible IR Flash for true covert night vision.
- Motion activated or time lapse mode.
- Compact, lightweight and portable.
- Rugged UV resistant weatherproof case (IP65) for harsh outdoor environments.
- Customised image-capture sequence and image encryption.
- Time and date stamped images with programmable text overlay.
- Flexible scheduler for independent arming and disarming of camera.
- Digital signature including camera ID, within each image for integrity verification.
- Optional Colour camera available for daytime operation.
- Optional 16mm or 6mm Telephoto lens.
- Ideal for monitoring farm gates & sheds, livestock, construction sites, holiday homes, residential & business etc.

MLA Member benefits

So why join the MLA? What's in it for the locksmith? As well as the training and MLA Expo mentioned elsewhere in this handbook, there are a significant (and ever growing!) number of other benefits to MLA membership. These include:-

Members Journal

- All members receive the magazine "KEYWAYS", this is an in-house magazine for members only, with hints, tips, new products, information on the association, meetings, exhibitions, members' letters and membership details.

Regional Meetings

- Members at all levels are encouraged to attend regional meetings where they can meet their colleagues in the association, talk to experts, listen to seminars and visit small exhibitions. The MLA has recently implemented a Continued Professional Development scheme for which points can be gained by attending the training provided at these meetings.

Members Forum

- There is an interactive forum for MLA members to share information, ask questions and further enhance their knowledge, whilst also networking with colleagues and sharing work.

Technical Assistance

- The MLA's Technical Manager is on hand to help answer any questions you may have relating to for example lock standards etc. By sitting on the various lock related working groups and British Standards Committees the technical manager has first-hand information as soon as items are discussed and provides regular feedback to members via articles in the association's journal or by presentations at regional meetings.

Supplier Discounts

- A number of MLA affiliate members provide significant discounts on their products to MLA locksmiths, this can be anything up to 25%.

Insurance Related Benefits

- The MLA has negotiated preferential rates with a number of insurance brokers. These include specialist policies for locksmiths and discounted general policies. Members are also eligible for specialist healthcare cover via The Hospital and Medical Care Association and a specific accident insurance for continued income provision has been arranged.

Finance Related Benefits

- MLA members have the option to benefit from a 30% discount over standard prices for the use of DebtorController.com, a low cost online debt collection service specifically designed to make it both easy and extremely cost-effective for businesses to secure monies owed to them using an online system that automates the process of debt recovery.
- Banking advice is available from one of the UK's leading independent banking advisors as well as independent financial advice from a leading firm of advisors.
- Discounted mortgage and pensions are available to members
- Discounted credit card processing rates are also available via 2 major suppliers. Terminals, including mobile terminals for taking payments away from the office, are available to members at discounted rates. The association also has a scheme for members who don't require terminals and only take occasional card payments.

- Discounted business finance is offered via the BHF's Finance scheme. This also includes access to the BHF's clearing system, a system that helps you save time as well as bank charges by paying all your suppliers with one cheque via the BHF's clearing house.
- Asset finance is available via a partnership with a major player and this extends to enabling members to offer finance to customers for specific jobs thereby helping the customers cash flow whilst enabling the member to be paid in full immediately.

Vehicles

- MLA Fleet brings you a range of services and discounts to help you procure and operate your vehicles in a very innovative and highly cost effective way. Savings can be considerable - ranging from 5% to 38% through our specially negotiated terms with vehicle manufacturers and suppliers, along with free services including; Foreign travel guidance and authority issue, general guidance to drivers regarding Benefit in Kind / taxation, Servicing and MoT reminders - by email, phone or text, Road tax licence renewal reminders - by email, phone or text etc.
- A further development of the partnership with Fleet Department is the MLA's Vehicle Rental Programme,
- For those wanting to go direct the MLA has negotiated a range of significant discounts with Vauxhall (on both its commercial range and cars - up to 27%)
- Discounted AA membership is available to members as well as special rates with Bodyshops online.

Advertising & Promotion

- As well as being advertised on the MLA's find a locksmith page, in this handbook and in the Security Industry Directory, MLA approved company members can also advertise in corporate boxes in various directories. They are also automatically entered onto a number of websites and have the option of being included in various other directories either at discounted rates or in ones which are limited to MLA members only.
- Members can benefit from a 25% discount on website creation and hosting and get a free website stats package via a deal brokered with Site Wizard.
- For those who don't want a whole website then a "webvert" can be offered; a simple one page site so that you at least have a web presence with your own dedicated web domain and associated e-mail addresses.

Telecoms

- The MLA has teamed up with a leading Telecoms provider to offer members discounted telecoms deals for landline, mobile and broadband requirements

Non-Locksmithing training

- Distance learning courses via partners covering topics such as H&S, selling skills, basic retail legislation, customer care etc.
- 20% discount on Tavcom training

Others

- Health & Safety and Personnel support via various partners
- PNC Stolen Vehicle checks (via Retaina Group)
- Discounted British Standards
- Draft Terms & Conditions for you to adopt
- Longer free trial of Task Adviser, an online task management system

If you're interested in more details of any of these benefits then please contact the association on 01327 262255 or enquiries@locksmiths.co.uk

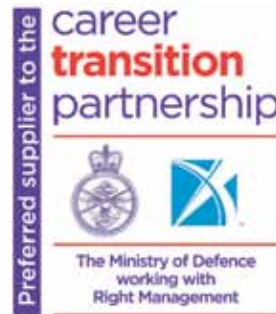

MLA Training

MLA locksmithing technical courses are taught by experts in the respective fields. All tutors have a significant amount of experience to pass on to students and are all experts in their field.

The establishment of a purpose built training centre at the MLA's head office enabled the organisation of a basic training programme in 1992. This has been subsequently added to an improved to become what is now very successful training package, culminating in the BLI Exam which is renowned throughout the locksmithing industry as the only formal locksmithing accreditation.

The exam itself is split into 4 parts and includes a written section on locksmithing knowledge and 3 practical parts which cover fitting, opening and cutting a key by hand.

The MLA's technical excellence in training has been recognised by the military with the awarding of preferred supplier status to the Career Transition Partnership as well as being designated an Enhanced Learning Credits scheme provider (No. 1681).

The MLA's training has also been recognised by City & Guilds with the MLA now being an Approved Training Centre (No. 027758) offering a tailored C&G award in basic locksmithing (No. 1841).

Courses Available include:-

Technical Courses

- General Locksmithing
- Opening
- Safes

- Access Control
- Auto Locksmithing
- CCTV
- Electrical Safety
- Fire Regs
- Asbestos Awareness

Other training courses are available to MLA members such as Heritage Locksmithing, Health & Safety, Marketing, Website Effectiveness, to name but a few, and we are working with our affiliate members to provide further courses in the near future.

We have also established a relationship with BIRA (formally The BHF) to be able to provide their “Steps to Excellence” distance learning courses to MLA members at discounted rates. These include areas such as Merchandising, Customer Care, Communication Skills, Payment handling, Staff Recruitment and induction etc.

Why do courses in a particular order?

The MLA puts particular emphasis on providing high level of training in the best fashion. For this reason, unlike many other training schools we only offer opening courses to more experienced locksmiths or those who have done the general locksmithing course. The reason is to ensure a general understanding of the principles of how locks work to ensure the maximum is gained from the opening course (and the techniques learned can be implemented to the best effect). We are also careful in what we teach to who, requiring CRB checks to be undertaken before we will teach opening techniques. In fact the MLA is the umbrella organisation for CRB checking within the locksmithing industry.

General Locksmithing Course

This 5 day course is aimed at people looking to join the locksmithing industry, or those who have just started out and wish to learn “best practice” from master locksmiths.

Topics covered in the General Locksmithing Course include :-

- Basic Locksmith Tools.
- Basic of Master Keying
- Blank Identification & the basic of key cutting to Pattern
- Brief History of safes & locks
- Door & Frame Construction
- Health & Safety
- Key Machine & workshop safety
- Key Procedures for Restricted & Registered Keys
- Keycutting to a: Cabinet, Mortice & Safe Lock
- Mechanical & stand-alone Digital Locks
- Mortice & Rim Lock Fitting
- Padlocks & Locking Bars.
- Principle of Lever, Disc Tumbler & Pin Tumbler mechanisms & key differs
- Product Knowledge

- Specialist Door Locks, UPVc, Aluminium & Multi-point
- Stripping & reassembling of Lever Locks & Pin Tumbler Cylinders
- Stripping a Rim Cylinder & Cutting a key by hand.
- Window & Ancillary Door Locks

Opening Course

This 2 day residential course aimed at Advanced Student and above and covers:-

- Theory & terminology
- Opening authority procedure
- Lock identification
- Pick making & Picking tools
- Silver Soldering Demonstration
- Opening techniques and skills demonstration for various lock types

Workshop for students to implement skills learnt

[For security reasons, full details of this course are not publicised]. Students are taught to produce their own toe picks, jigglers, various bypass tools and simple 5 & 6 lever padlock picks. Various picks available for purchase are then discussed including the triple pick, 114 cam pick, Faille Safe’s Securefast Pick, 2 in 1 picks, overlifters, Bob Curry’s drill templates and several of Paul Sauber’s bits.

Picking by hand as well as by pick gun is covered as is bumping. Lock recognition also forms a large part of the course.

Safe Course

A 2 day residential course dealing with domestic and light to medium commercial safes, covering:-

- Introduction to start at common level of knowledge.
- Overview of safe construction, locking methods and opening techniques, including wording of invoice to cover work completed.
- Drill technology including sharpening, Drill rigs type and use.
- Hardplate penetration and lock manipulation methods through drilled hole.
- Relocking devices in detail – pitfalls and rectification.
- Safe repairs following opening by penetration.
- Safe repairs and maintenance as a result of user problems excluding lock-out.
- Alter combination & cut new keys.

- Final assembly adjustments, test & hand safe back to customer.

All subjects covered will be by taught by lecture and demonstration. In the case of safe opening, students will examine safes in open state followed by practical opening of a randomly selected safe in teams of two by drill and tool manipulation, a case of a lock-out due to relocker activated will be demonstrated.

Access Control Course

It has become increasingly important for locksmiths to be able to offer a diverse range of services. With security having an ever increasing profile now is the time to learn a new skill.

This two-day residential course will be aimed at Advanced Student & above who are new to electricity and those who wish to increase their knowledge of this very important subject.

This course covers: -

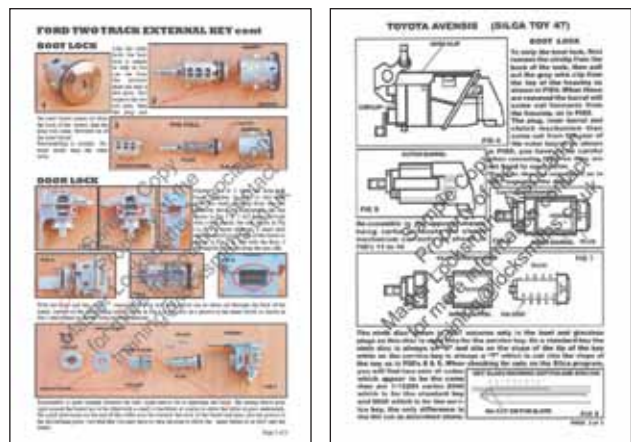

- Health & Safety in relation to Electrical Access Control
- Installation and Best Practice
- Theory of Electricity
- Product Choice
- Specification

In addition to the above items there is a hands-on workshops dealing with the practical installation of 3 different types of access control system, in order to get you confident in this field.

Auto Locksmithing Course

Automotive security is becoming ever more complex, and as such the art of auto locksmithing itself is becoming more specialised with the need for modern equipment and constantly updated know-how. The MLA offers a 2 day introductory course, aimed at current locksmiths who are interested in getting involved with the auto side of the business.

This introductory course covers: -

- Hands on experience for removal of Ford Tibbe ignition barrel without a working key, Vauxhall ignition barrel removal without a working key and Rover ignition disassembly for re-keying and reassembly
- Examination of the following lock systems, and discussing general tips and tricks for dealing with: Citroen pin systems, Fiat side bar system, Peugeot, and Renault lock systems.
- VW 2 track internal laser, Peugeot 4 track external laser, Lexus 4 track internal laser. Ford C-Max 2 track external laser
- Mechanical methods of opening old and new cars; wedges, air bags, through the car tools, lock picking and over lifting

- Diagnostic equipment demonstration by Hickley Valtone and hands on key programming & tips.

Other Training

Other training courses are available to MLA members such as Health & Safety, Marketing, Website effectiveness to name but a few, and we are working with our affiliate members to provide further courses in the near future.

We have also established a relationship with the BHF to be able to provide their "Steps to Excellence" distance learning courses to MLA members at discounted rates. These include areas such as Merchandising, Customer Care, Communication Skills, Payment handling, Staff Recruitment and induction etc.

The MLA is also able to create tailor made courses, so if there's an area of physical security that you're interested in then let us know!

Training is run at a regional level as well as at head office and of course at Expo.

The MLA sees training as a never ending activity for locksmiths, irrespective of how experienced they may be,

and to promote this the association has its Continued Professional Development (CPD) scheme whereby members record the training undertaken.

MLA Expo 2012

Well initial indications that Expo would be a "biggie" came to fruition. Record pre-registrations for the event fed through into a significantly increased footfall. No doubt helped by the increased number of exhibitors, a serious step up in marketing of the event and a significant amount of training on offer, MLA Expo cemented its position as the number 1 Locksmiths Exhibition in the UK.

Visitors came from as far afield as China, New Zealand and the USA. It was also great to see a huge contingent attend from Ireland, highlighting the close relationship the MLA enjoys with the Associated Locksmith of Ireland. Sponsored by locksmithing tool specialist UAP Tradelocks, Expo visitors had the opportunity to meet suppliers, test products, discuss industry trends, chat with fellow locksmiths and take part in the training. The atmosphere was really electric, with significant business being done, contacts being made and a tangible sense of enthusiasm about the industry. This year's expo was particularly positive for exhibitors, with a significant amount of business activity taking place over the full three days and a great buzz in the exhibition hall. Many of the commented on how it had been their best Expo yet."

Graham Jones, Managing Director of Multipoint Locks who exhibited throughout the 2011 Expo: "Well, what can we say about the MLA Expo, other than that we can't wait for 2013. The exhibition far exceeded any targets we had set in terms of both sales and contacts made. We've been told by many that we were one of the busiest exhibitors there - and it certainly felt like that!

"The variety of exhibitors meant that there were visitors from across the board from police forces and fire services, to general security engineers and day to day locksmiths.

The amount of business that was generated both at the exhibition and in the small number of working days since has been unbelievable, and we hope that there will be plenty more to come. We'd like to say a big thank you to the team at the MLA for such a well-planned and thought out exhibition - we couldn't have asked for anything more..."

This year's Expo also saw a marked increase in the range and number of training workshops and advice sessions available to visitors, with locksmiths signing up to expand their skills throughout the three days.

Training has always been an integral part of the MLA and therefore also MLA Expo. The event exists for the benefit of locksmiths, so having training available is a way of ensuring they get the most out of the show. The MLA is committed to promoting high standards throughout the industry and it is important for the association to offer training to its members. The training sessions also provide great networking opportunities and the chance to share expertise. The training schedule this year was more varied than ever before, looking at issues ranging from auto-locksmithing to access control, safes, UPVC and fire regulations as well as practical business training such as credit control and marketing."

As well as taking part in training, visitors to the Expo could get actively involved in other ways too. Chris Pankhurst, Sales Director at Tradelocks was delighted with the turnout at the Expo and explained how Tradelocks got people engaged at its stand: "We've had a great time at the MLA Expo, with lots of interest in the new tools we're showcasing, including a new letterbox tool and plug puller. We also got people involved by running an 'electric pick gun' competition, where people raced each

other to release a lock; encouragingly even those who had never used one of these tools before succeeded. We're used to trade shows being manic but this Expo took things onto another level."

Exhibitors across the board were keen to emphasise how important the MLA Expo is as a focal point for meeting with customers. Paul Johnson, Commercial Manager of Assa Abloy explained that the Expo presents a great opportunity to speak with self-employed locksmiths who it is often tricky to engage with face to face due to the mobile nature of their work. Johnson commented on the importance of reaching out to the wider market and that events such as the MLA expo are pivotal in achieving this.

Nick Hill from Burton Safes echoed this view, observing that 'we're all here for the same thing - we're all in the same trade and this is a great way to support each other and meet with the customer base'.

Such positive responses highlight the fact that the MLA Expo is regarded as one of the highlights in the

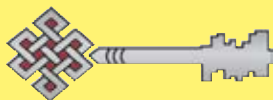

locksmithing calendar and is a must-visit event for professionals from all over the world.

A substantial proportion of the profits made from the 2011 MLA Expo will go towards the development of a nationally recognised locksmithing qualification and apprenticeship framework for the locksmithing profession. Working alongside the industry skills body Skills for Security (SfS), the MLA has championed the development of National Occupational Standards (NOS) for the industry which were the first step of the project and are currently being used as the basis for the next step of the qualification and apprenticeship framework development.

The MLA runs regular events either on a national or regional basis so keep an eye on the website to find out what's happening and what industry events you could be attending.

Hewitt Safe & Lock Services Ltd

Specialist emergency safe opening, servicing and repairs for the trade, private and public sectors

Un-marked van for discreet or sub-contractual work

Locksmith tool repairs undertaken

Call Chris on 07969176412/01942 811494 or email chris@hewittsafeopening.co.uk

MLA approved company covering NW and NE

We are a genuine 'bricks and mortar' company who have been providing Locksmith services in London for ten years. Because all our locksmiths are members of the Master Locksmiths Association you can be sure that your security is in skilled and knowledgeable hands when you need us.

24-hour rapid response to emergencies - Free quotes

We replace and install locks of all types

We cover domestic and commercial properties

Our work is insurance approved and fully guaranteed

For enquiries and bookings, call LONDON LOCKSMITHS LTD on 0207 978 2233

Our office hours are 8am-7pm Monday to Friday.

Email us at: info@londonlocksmiths.com Web: www.londonlocksmiths.com

Your security is our business

Accredited Safe Contractor. Insurance-rated BS 3621 (2007)

MLA PR review

This year the MLA has achieved exposure across a huge range of media – from targeting important sectors such as facilities management, heritage, property and childcare to further building homeowner awareness through articles in glossy consumer magazines, there's been a constant stream of activity to showcase the benefits of hiring MLA members.

A major highlight was the announcement to the press of the MLA's new Heritage Locksmithing course; this was obviously of great interest to trade publications as heritage work requires such specialised skills and the appropriate training can be difficult to find.

Believed to be the first of its kind, the MLA Heritage Locksmithing course received extremely positive write-ups across the trade press. We were also delighted that this story found a wider appeal and was featured in a number of heritage publications, including the National Trust's 'Views' magazine. English Heritage were so impressed by the course that they sent an email recommending contacting the MLA for details of heritage specialists to each and every one of their property managers. The success of the first course and interest in the subject has led to the MLA running further Heritage Locksmithing courses.

Moving from the historic to the ultra-modern, we targeted property managers of a very different sort of premises. The range of security issues facing facilities managers working for large companies can be mind-boggling. Fortunately the MLA were able to provide some clarity and advise on the multitude of options available to a facilities manager, who may be working with multiple locations, with the safety of hundreds of employees to consider.

We received an enthusiastic response from many facilities management publications, delighted that the MLA, representing its members, could offer an article containing some much-needed guidance on the variety of systems available and issues such as health and safety. Coverage achieved included pieces appearing in Premises and Facilities Management as well as several articles in FM World.

Of course it's not just in the world of business that security counts; it's of prime concern to educational establishments too. The MLA's PR team have been hard at work identifying all those whose job it is to

safeguard our children's security, from nursery managers and childminders through to school site managers and caretakers. Spreading the word about the value of the comprehensive advice an MLA member can give, we've had articles placed in Nursery World, Childminding Magazine and Caretakers.net with a piece to follow in Leadership Focus, the magazine of the National Association of Head teachers.

MLA members' profile has also grown significantly in the 'home' sector, both through coverage in glossy magazines such as Real Homes, Your Home and House Beautiful which brings the MLA and its members to the attention of a whole new market, but also through the introduction of a regular column, sent to papers across the UK to reach the audiences of our members.

The columns focused on different aspects of home security, ranging from moving house to selecting a qualified locksmith and have been featured widely across over 30 regional media home sections. Appearing in publications including amongst many others: The Metro (London), The Journal (Newcastle Upon Tyne), The Edinburgh Evening News, Wirral Globe, Blackpool Gazette, Huddersfield Daily Examiner, Wakefield Express, Yorkshire Post, Meon Valley News, The Gloucester Citizen, and the South Wales Echo.

Home security is not just an issue for those who live in the property they own, but also for tenants and landlords alike. The MLA capitalised on the massive property rental market to target both landlords and tenants, raising awareness of the services provided by MLA members through a huge range of articles offering security advice in publications such as Residential Property Investor, The Agreement and GSPC. We were even commissioned to produce a whole newsletter for Landlord Zone.

Another hugely important aspect of the MLA's activity this year has been the funding of the development of a nationally recognised locksmithing qualification, working alongside Skills for Security. Through this the MLA reaffirmed its commitment to the professional development of its members and to creating unified standards across the industry as a whole. Massive interest across the trade media resulted in articles highlighting the significance of this MLA-led initiative appearing in Locks & Security News, Risk UK,

Prosecure News Online, Info 4 Security, Security Oracle and Security News Desk among others.

And finally, we come to the Expo. I'm sure we'll all agree that this year's Expo was one of the most successful yet, with excellent attendance levels throughout the weekend and highly positive feedback from both exhibitors and visitors. We've also had an enthusiastic response from the press, with impressive amounts of coverage across the trade press and online both in anticipation of the Expo and in response to it.

Looking ahead, there's lots of planned activity in the pipeline to continue to highlight the wide variety of services MLA members provide to new markets, including a focus on security for students and a drive to place features promoting MLA members in the

Careers and Business press. Watch this space for further news on how we're spreading the word in the year ahead.

C-Series from UNION

The new C-Series from UNION continues the great tradition of lock making established under the Chubb Locks brand. It offers the same trusted products, made by the same people, using the same technology in the same factories but now under the UNION brand.

For full details of the new range, go to www.uniononline.co.uk or call UNION on 0845 223 2124 for our latest offers.

UNION Architectural Hardware is an ASSA ABLOY Group Company.
ASSA ABLOY is the global leader in door opening solutions, dedicated to satisfying end-user needs for security, safety and convenience.

Sold Secure

History

Sold Secure was established in 1992 by Northumbria and Essex Police who combined 2 initiatives, Sold Secure and Partnership Against Car Theft (PACT) to form Sold Secure with the help and backing of the Home Office. Sold Secure is now administered by the Master Locksmiths Association, in its premises adjacent to the MLA's Head Office just outside Daventry.

Purpose

Sold Secure provides test and assessment services of effective security products to commercial customers, the insurance industry, the Home Office, the Police and the public and is a company dedicated to reducing the risk of theft by the assessment of security products.

The scheme has close ties with a number of constabularies and insurers who provide regular information regarding the methods of theft and the tools utilised by criminals in their area. This helps to maintain an up to date specification and means security products can be assessed in the light of the risk they are likely to encounter when in use.

Organisation

Sold Secure is made up of a small team of dedicated staff. Steve Warren is Lab Manager looking after operations for the company as well as performing the majority of audit

testing and managing any external testers who are brought in. Lesley Robertson, who is the Administrator, looks after all the paperwork and the accounts. Sold Secure also call on the services of Steffan George for business development and general management as well as Justin Freeman, the MLA's Technical Manager for extra technical assistance such as writing new standards for testing and signing off reports etc.

The company has its own board of directors who meet on a regular basis to ensure the running of the company is going according to plan. It's important to note that the company is a completely separate entity to the MLA, with its own staff, own legal entity, own board, separate accounts etc.

Testing, Assessment and Approval

Why Test?

Security product manufacturers make various claims with regards to the security of their products, but what do these claims actually mean? By developing relevant test specifications with the involvement of the relevant stakeholders (e.g. Police, Insurance, Industry Bodies etc), as well as adopting relevant BS/EN test norms where appropriate, Sold Secure can test all products to these standards and provide the public with an understanding

of how that product performs against the standard, as well as against any competitor products.

One of the main drivers for product testing is insurance recognition and recommendation. Many insurance companies understand the benefits of specifying Sold Secure products in reducing the likelihood of theft and the subsequent claim and will actively encourage their customers to use the products by giving discounts on policies where Sold Secure products are used or in some instances insisting that Sold Secure approved products are used in order to provide cover at all. The police also recommend Sold Secure products with Crime Reduction Officers particularly vocal in their recommendation and always making a beeline for the Sold Secure stand at any exhibition to get their latest copy of the Sold Secure Approved Products catalogue.

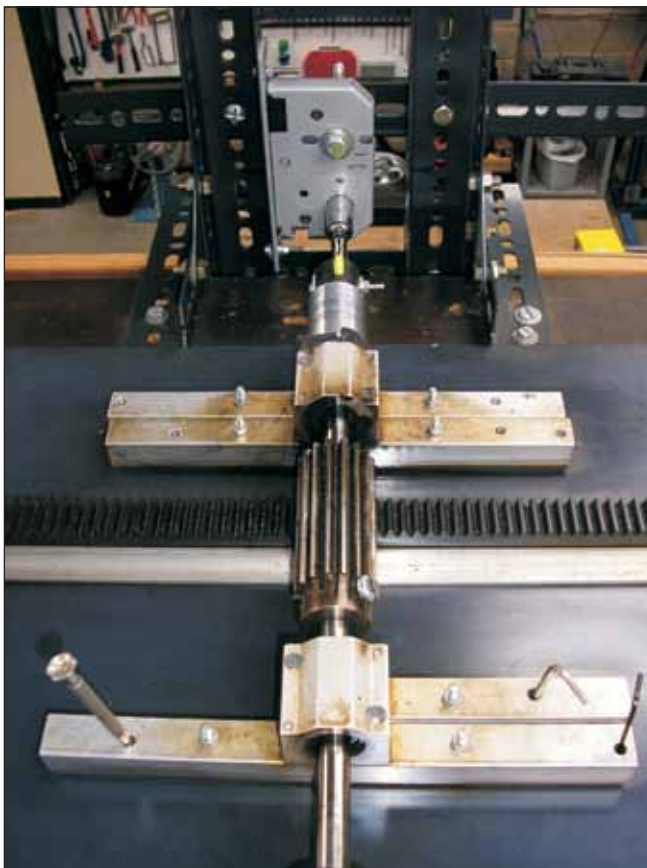

The Association of Chief Police Officers own accreditation company Secured by Design also recognize the benefits of Sold Secure testing and use the approval as part of their accreditation process, thereby pointing a number of manufacturers our way for the attack testing to give SBD confirmation of the integrity of the product.

Manufacturers and suppliers can apply to have their products approved by Sold Secure. Products which have been satisfactorily assessed may bear the Sold Secure Quality Mark. The tests are carried out to strict criteria set out in Attack Specifications drawn up in conjunction with interested parties, such as insurers, police forces as well as

industry specific organisations such as the Caravan Club for example. It's important to note that the interested parties do not include manufacturers, which allows Sold Secure to be independent of any vested interests.

The testing is carried out in-house with a team of approved testers, all of whom are Master Locksmiths in their own right or experts in their field. By using this highly experienced team of testers it is possible not only to ensure continuity but also to act as a "worse case" type scenario due to the significant product knowledge and attack methods knowledge held by the group. As well as testing to the Sold Secure standards, testing can also be carried out to a range of European Standards, such as EN14450 for safe testing for example. Also, some of the Sold Secure specs refer to European norms such as EN12209 & EN1303.

Sold Secure differentiates itself from its competitors by helping the manufacturers understand the testing involved and how to improve their products. They always suggest that when a customer has a new product they're thinking of getting approved they bring it for an initial consultation where they can evaluate the product and what category and level we feel it should be aimed at. We can also provide some up front consultancy on any areas of weakness we may find, thereby saving the manufacturer what could otherwise be a costly test. Whilst commercially Sold Secure may make more money by testing something it immediately knows will fail, they quite rightly feel that it makes far better long term business sense to build

relationships with our customers and help them improve their products and ensure they retain them as customers.

Approval Categories

As you will see from the information below there are several categories that Sold Secure test to and each category uses one of three levels of resistance, Gold Silver and Bronze, excluding the caravan, tracker and lock cylinder categories which have an additional Diamond level of attack resistance.

The attack specifications vary for each category in the types of attack and tools used in the test. Higher value products have much tougher tests than lower value products where the attack is less likely to be planned or the thief well equipped. For example bicycle attacks are carried out using lighter tools and no power drills as the theft is more likely to be opportunistic rather than planned. Caravan security devices however will need to withstand attacks using drills and large pry bars, amongst other things as they are more likely to be planned and executed by more professional thieves due to the value of the item.

Motor Cycles & Motor Scooters

Around 50,000 motorcycles are stolen in this country every year. Many of these are broken down for spares and less than a quarter are ever recovered. A very high percentage of those stolen are actually taken from outside their owners' homes. It may be interesting to note that a bike parked in a busy main road may sport several security devices but when parked at home the bike may be left unsecured.

Sold Secure has a single level of Motorcycle Security Approval (Gold) and two levels of Motor Scooter security (Gold & Silver). Using a toolkit based on insurance and police information, the motorcycle is proven safe from the average thief. There are a number of options for security at home and also when parked away from home.

Bicycles

Sold Secure has developed a three tier security grading system. The Gold rated locking devices offer the highest level of security. The next level down Silver offers a compromise between security and cost, whilst the Bronze level typically offers defence against the opportunist thief. Thus the purchaser can choose the system which best meets his needs or the relevant insurance requirements. Again there are a number of options for mobile use and some solutions for the home environment. A number of bicycles are stolen from insecure garden sheds or garages and we have tested ground anchors, shackles and security posts to help in this area. Also see our new category for domestic buildings.

Caravans

Recent statistics show that over 5000 caravans are stolen every year and very few are recovered. Indeed according to Home Office resources caravans stolen from the UK have been found as far away as New Zealand! Once again, Sold Secure approves locking systems using the tools that a typical thief would carry. There are three levels of security approval. The Silver level offers basic security, a cost effective product for the occasions when a caravan is stored in a good location. When a higher level of security is required, then the products approved to the Gold standard

are available. The Diamond level is the highest of all and offers maximum protection. Ground anchors and security posts are available for fixed security at the caravan's main storage point. Tracking units are becoming more and more popular for Caravans and whilst they are a passive system, monitoring location when stolen (rather than an active system preventing theft in the first place) Sold Secure have a test specification for these products.

Ground Anchors

On many occasions, for maximum security, a simple lock is not enough. Unless your bike, motorbike, caravan, boat, trailer or motor mower is fastened down it may be possible to steal it, lock and all! The answer to this is a ground anchor. When installed in your garage, drive or car park, these provide the ideal device for securing your vehicles and other valuable outdoor equipment. Where necessary, use these with a Sold Secure Approved lock.

Security Posts

An ideal way of preventing your vehicle from being stolen from your drive or car park is the security post. These are tested to the normal Sold Secure criteria, making it difficult for the criminal to bypass the security post. They can be effective in securing several vehicles at one time. They can also be used to protect your parking place!

Cars

Crime statistics indicate that the average car thief would wish to spend no longer than 2½ minutes gaining entry to a vehicle and driving off. The Sold Secure attack test acknowledges this criteria and tests the product for a full five minutes. Thus any Car product bearing our seal of approval must improve your chances of finding your car where you left it. Such has been the success of this scheme; car manufacturers now build in security at the production line stage.

Commercial Vehicles

The loss of a commercial vehicle is always made worse by the theft of its contents and the disruption to your business. Sold Secure have approved a range of products designed to protect the vehicle and its cargo.

Annual Audits

As part of the Sold Secure Quality Mark products have to be resubmitted every year for an Annual Audit. The audit is an important part of maintaining the security of the products approved under the various categories, particularly when components are bought in from outside sources by the manufacturers. The Annual Audits can show up to a 25 to 30% failure rate often due to a change in specification from an outside supplier, this can include parts of a product that aren't hardened properly or made from different materials to the original sample tested at the outset, normally done to try and save cost. This provides an additional benefit to the company getting the testing done of Sold Secure performing what could effectively be described as conformity of production testing for them, an

essential item as customers may not have been informed of changes to products they are buying in.

Benefits to Locksmiths & Retailers

The main benefits to locksmiths lie in the ability to sell products that have been approved to standards that are already familiar to and recognised by customers. The Caravan Club has been very active in promoting Sold Secure products and most motorcyclists also recognise the value of an approved product

Website (www.soldsecure.com)

Sold Secure has a relatively new website and it holds a full listing of all Approved Products which is updated instantly a product either achieves approval, or alternatively lapses. This offers a major advantage over many other test houses where lists of approved products have to be created and then uploaded to their website meaning that their lists can be anything up to 3 months out of date. The Sold Secure approved products list has a direct link to a brand new database which means that as soon as the product test file is updated the info will immediately be on the website, effectively providing a "real time" Approved Product list.

The website allows everyone to see whether a product has Approved Product status. Sometimes products are not resubmitted, in which case they may still be displaying the Sold Secure logo on the packaging but no longer be approved. It also means that if someone is selling a product as Sold Secure Approved then you can tell immediately whether this claim is true. The importance of this has been proved recently with one insurer having checked to see if a particular product was approved and when it wasn't going back to the member of the public to highlight that the relevant discount was not available to him as the product's approval had lapsed.

On the website there is also a download area where Internet users can download the Sold Secure catalogue, the MLA's Guidelines for domestic security as well as a glossary of terms.

Information on these approved products is circulated by Sold Secure to crime reduction officers, insurance companies, the media, the Home Office and the public, and is available free to those who request it. The new website also highlights the MLA and suggests that MLA approved companies are used for the supply and fit of approved products. This dovetails nicely into the fact that some insurance companies stipulate that in certain instances Sold Secure approved products have to be used and fitted by an MLA locksmith. This has netted a couple of MLA member's jobs and goes to show the benefit of Sold Secure to the MLA.

If you're interested in getting a product approved then e-mail Sold Secure on sales@soldsecure.com or ring us on 01327 264687.

Buyer beware

Thirty years ago in 'the good old days', the locksmith's shop was very much a 'brown overall' business often combining key-cutting and basic locksmithing with hardware products and the sale of paraffin. Today's professional Master Locksmiths are far removed from this outmoded stereotype and have a reputation for expertise and professionalism. This did not come easily and anyone who has been in the business for a year or two, recognises that goodwill is 'hard won and easily lost'. However, there is one area where even the most experienced MLA member can easily blunder. It is in the supply and installation of cash safes.

Let's refer back once more to those earlier times. In the 1970's insurance company's Senior Burglary Surveyors ruled the roost. They were involved with manu-facturers at every stage of production, from drawing board to the finished article. It was the Senior Burglary Surveyor who decided the cash rating based on his technical know-how and the various in-house tests he had witnessed. As we entered the 1980's the insurance industry began to change. There was far less new business and much keener competition amongst underwriters. Economies had to be found so the Burglary Surveyor and Fire Surveyors were amalgamated. Specialists began to be replaced by 'composite' surveyors with a much broader brief but far less in-depth knowledge.

To make the surveyor's life a little easier, the insurance industry called for standards for testing and rating safes to be introduced; something British safe makers strongly resisted. Protests became even louder when we joined the EEC and the introduction of pan European standards were discussed. They knew that if they were ratified it would fling the doors wide open to foreign competition. With many European countries having cheaper labour and paying far less for their steel, they could see the writing on the wall.

All their efforts were in vain and in 1997 EN1143-1, a European standard for testing and rating cash safes was formulated. In theory it was a great idea. A safe tested in Sweden in accordance with EN1143-1 and rated Grade I

Mike Palmer

would provide exactly the same level of protection as a similar safe tested in France, Germany, the United Kingdom or any other member country. At first all went well, but it was not long before it became obvious that not all test houses applied the test procedures with equal vigour. As manufacturers began to design down to the standards, price became king. A policyholder told by his/her insurer that they required a Grade I safe in order to obtain the required level of cover simply shopped around for the cheapest Grade I they could find, in the belief that they all must provide the same level of security.

Eventually insurers also recognised that not all test houses applied these standards with equal diligence and matters became even more confused when Eastern European countries

joined the Community and dozens of Internet companies began selling poor quality products at knock-down prices. In Western Europe, where they were experiencing the same problems, two organisations were formed to help restore confidence in standards; the European Fire & Security Group (EFSG) and the European Certification Board- Security (ECB.S).

Today, many leading British insurers require cash safes to be tested by laboratories affiliated with EFSG or certified by ECB.S. These 'approved' products receive the full recommended insurance cover whilst the level of cover extended to safes tested and certified elsewhere by non affiliated laboratories is substantially reduced.

The problem is that it is difficult for the security supplier to know which products are acceptable for the full limit and which are not. They get little guidance from manufacturers or suppliers who simply tell them the onus is on the buyer to make sure the safe they are being sold is acceptable to their insurers. If their insurer subsequently rejects it or grants a lower limit, then it's their own fault. That doesn't seem to be a very helpful or professional stance. If you bought a car through a specialist dealer who assured you it would do 70 miles to the gallon and you later find out that it only does 20, you

would not be best pleased to be told, "It's your own fault. It was up to you to check for yourself before you bought it". When their insurer tells your customer the safe is unacceptable for the limit you advised, your credibility and reputation flies out the window. Worse still, the only way to restore it may be to remove the safe and replace it with a more acceptable model - at your expense.

So how can you avoid these pitfalls and be sure you are giving correct advice to your customers? Firstly, always ensure that any lighter grade safe you sell has been submitted for testing by Sold Secure and rated as Gold, Silver or Bronze or tested in accordance with EN14450 (a standard for testing low grade 'safe cabinets' designed primarily for domestic use) and graded level S1 for up to £2,000 cash cover and S2 for up to £4,000.

Heavier quality cash safes should be tested in accordance with EN1143-1 the standard for testing and rating cash safes with ratings from Grade 0 (£6,000) to Grade VI (£150,000). However, this on its own is insufficient. To be absolutely certain they will receive the limit the customer requires from their insurer, the test house must be a member of EFSG or the certificate issued by ECB.S.

But how will you know? The best way to obtain this information is to refer to a current copy of the Safe Guide from the Association of Insurance Surveyors (available to members of the Master Locksmiths Association). It lists hundreds of in production and out of production safes, giving recommended cash ratings for each model. It will indicate those safes liable to be down graded or where the claimed grading has not been authenticated.

Secondly, look out for the AiS Approved Safe logo on literature, websites and on the actual safes themselves. The precise purpose of this newly introduced scheme is to make life easier for specifiers and suppliers.

Thirdly, purchase your safes from members of Eurosafe UK, the trade association with over 25 member companies pledged to abide by a strict code of practice. They will be happy to steer you through the minefield of insurance requirements and standards. A list of member companies can be found at www.eurosafeuk.org.

One last cautionary note; unless you are very experienced, conversant with all relevant Health & Safety requirements and very well insured, don't be tempted to deliver and install heavier grade safes yourself. This is fraught with risk and best left to specialists.

Finally, if you are in any doubt about the acceptable cash rating for any cash safe whether it be in current production or long gone, take advantage of the comprehensive free safe identification service sponsored by A to Z Safe Warehouse.

New Kitemark standard for cylinder lock security

The UK's leading lock makers and door manufacturers, together with police security professionals and the insurance sector, have given a warm welcome to a planned new Kitemark scheme to accompany the new security standard for domestic lock cylinders.

The TS 007 standard has been developed by the Door & Hardware Federation and the Glass & Glazing Federation with consultation and support from leading industry associations and from Secured by Design. It is designed to give assurance to householders that cylinders and protective furniture that carry the Kitemark to TS 007 will resist cylinder snapping, bumping and other forms of cylinder attack.

The standard and the Kitemark certification is the industry response to growing concerns that an increasing number of homes are under threat from burglars who learn lock attack techniques from the internet.

Said DHF chairman Bob Perry: "The BSI Kitemark is the certification mark that has the highest consumer recognition by far, particularly when it covers domestic security. So, this is a most important step forward in helping domestic householders ensure their homes are safe against the latest methods of lock attack."

The new TS 007 standard has been modelled on the cylinder security requirements of the long established PAS 24 standard, the security "gold standard" for domestic doors that come prefitted with security locking systems. The new standard will require the use of a Kitemark symbol and star ratings that range from one to three stars.

The certification can be achieved by either a "super cylinder" (three stars) that successfully resists snap attack, or a combination of a cylinder (one star) and security door furniture (two stars) that provides the same degrees of resistance against attack.

"It's important to stress that the new standard concentrates on setting strict levels of performance - it does not dictate how lock suppliers and manufacturers meet those standards," Bob Perry pointed out. "So, if a manufacturer

or supplier can meet the TS 007 standard by uprating the cylinder alone, then that's fine. If the solution to meeting the standard is by utilising a combination of uprated cylinder and security door furniture, that's equally acceptable. Where different solutions offering similar performance are possible, it is up to the market to decide between them.

"We take the view that the continual development of burglary techniques, fuelled by the amount of information disseminated on the internet, means we should leave it to manufacturers to offer a variety of security solutions should one particular security solution be compromised."

The DHF, GGF and other stakeholders including Secured by Design, will be promoting the new TS 007 standard in the second quarter of 2011. An information campaign will be directed to door manufacturers and installers, public sector bodies, police and security specialists at the same time. An awareness campaign aimed at the consumer, run in conjunction with Secured by Design and BSI, will follow as products meeting the new standard become available on the market.

Jon Cole, national operations manager of ACPO Secured by Design said: "The introduction of the TS 007 Kitemark certification is a significant step forward in improving domestic security. We are greatly encouraged by the unprecedented widespread support the standard is receiving from the lock industry."

And Giles Willson, director of technical affairs at the Glass & Glazing Federation, said: "The basis of the new TS 007 standard using a Kitemark and a star rating has come about from a number of industry meetings, including a meeting comprising all the current lock and cylinder Kitemark holders.

It's an example of how the UK doormakers, glass and glazing specialists, lock makers, security professionals and police are working together to produce a security standard that has real meaning and will be recognised and acknowledged by the general public and professionals alike."

CISA

CISA Astral S 24 Cylinder

Enhanced security for PVCu and composite doors

The new CISA Astral S 24 cylinder from Ingersoll Rand Security Technologies has been designed to comply with Clause A parts 1 & 2 of the PAS 24:2007 Enhanced Security for Door Systems Standard, straight from the box.

Given its many security features, the CISA Astral S 24 is an ideal solution for all PVCu and composite doors, helping manufacturers to achieve the latest standard without the need for extra door preparation and expensive armoured lever handles or cylinder guards.

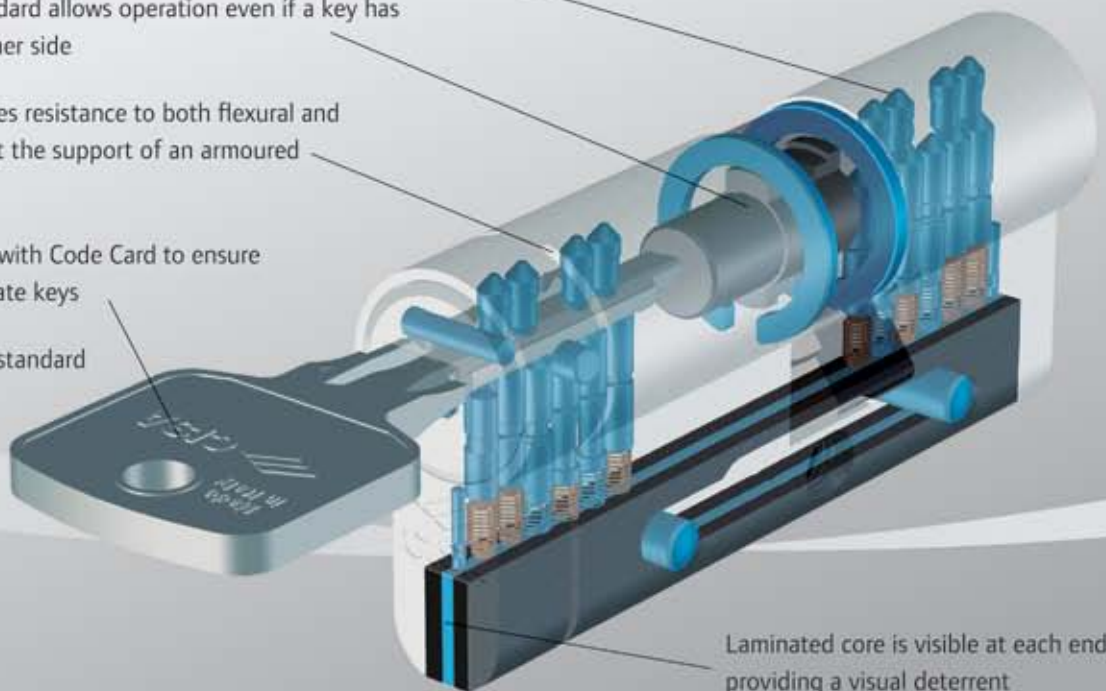

10 Pin key biting system - over 1.6 million key differs

Clutch cam as standard allows operation even if a key has been left in the other side

'Break Line' provides resistance to both flexural and pulling test without the support of an armoured handle

Reversible flat key with Code Card to ensure high quality duplicate keys

3 keys supplied as standard

Patented laminated steel core provides 'Snap Resistance'

BKP Bump resistant device fitted as standard

'Anti-drill' configuration for additional attack resistance

DIN standard steel cam provides 'Push Resistance'

Special driver profile provides 'Pick Resistance'

BSI Kitemarked to guarantee quality and safety

Skills for Security

— working with the MLA

David Greer

Since 2009 Skills for Security has been working with the MLA and the wider locksmithing community to produce National Occupational Standards for the sector and then use them to develop a nationally-recognised qualification and apprenticeship framework. The aim is to ensure that all locksmiths throughout the UK are trained to the same high standard that they and their customers will value and to provide an apprenticeship route into the industry.

We asked a group of locksmiths with different backgrounds and experience how they do their job and then, after much discussion in meetings and through email consultation, invited the wider community of locksmiths to have their say on the draft National Occupational Standards (NOS). Their comments were incorporated into the final version.

National Occupational Standards

- describe the knowledge and skills required to perform work to the nationally agreed standard for each specialism

- are determined by experts currently working in the field to reflect up-to-date working practices and provide an accurate benchmark
- are a free resource used by awarding organisations to design qualifications and also by employers to write job descriptions and adverts, design training programmes and assess the skills of their employees.

The National Occupational Standards for Locksmithing are now available for you to download at:

www.skillsforsecurity.org.uk/index.php/help/35/2

In May 2011 an advisory working group was set up with MLA funding to look at the development of a nationally recognised qualification structure and locksmiths were invited to take part through the trade press. The resulting draft document was put out for wider consultation and the final version is available at:

www.skillsforsecurity.org.uk/index.php/help/41

Locksmiths were also asked to take part in a wider survey in July to assess the need for a national qualification and an apprenticeship. The results of this can be viewed at:

www.skillsforsecurity.org.uk/index.php/help/35/39

We are currently working with four Awarding Organisations on development of the apprenticeship framework and a Steering Group of locksmiths will meet in January 2012 to take this next stage forward.

We would like to thank all the locksmiths who have given their time to join the advisory working groups or taken part in the consultations and, in particular, the MLA board and members who have offered the leadership and support that have been essential to the success of the project to date.

The Launch of the Fire Door Inspection Scheme will help MLA members and their clients

— Gary Amer, Chief Executive, Guild of Architectural Ironmongers

The UK's new Fire Door Inspection Scheme (FDIS) is the first such scheme in Europe, designed to transform people's knowledge and understanding about the critical purpose and function of fire doors.

Developed and delivered by the BWF-CERTIFIRE Scheme and the Guild of Architectural Ironmongers (GAI), its ultimate purpose is to help improve safety and save lives through creating a new pool of expertise and competence to help those with legal responsibilities under the Regulatory Reform (Fire Safety) Order - commonly known as the RRO. It provides a vital new resource to help the 'Responsible Person' complete fire risk assessments for the premises they manage. It also raises awareness of defective fire doors and the potentially tragic consequences of leaving these unchecked.

Gary Amer

owner or landlord has five or more employees, the fire risk assessment must be recorded in writing. The assessment should include the inspection of fire doors and all their components necessary to enable the door perform in the event of a fire. Essential Ironmongery such as hinges, closers, locks and latches should be CE marked and CERTIFIRE Approved and are vital to the fire resistance performance of the door assembly.

Under the RRO, it is the duty of the 'Responsible Person' to ensure that the fire-risk assessment is carried out. While they can appoint some other competent person to do the actual assessment, they are still responsible in law.

However, until the introduction of the FDIS it has been difficult for them to confirm whether the responsible person is sufficiently competent to check fire doors and all the components fitted to them in their buildings.

The FDIS provides an online learning centre leading to a diploma in fire doors (DipFD), and a route to become a certificated fire door inspector (CertFDI). Professionals involved in fire doors, facilities management, building maintenance and other aspects of health and safety will all benefit from the scheme's education and qualifications support, and will have their competence independently verified.

As MLA members know every building owner, with the exception of domestic householders, is required by law to undertake a fire risk assessment. It should identify fire hazards, those people at risk, mitigation measures and action to be taken, information and training needs and how the assessment will be kept under review. If the building

Now they can be confident that FDIS certificated inspectors have had their knowledge thoroughly tested. Firstly, they will have been awarded a Diploma in Fire Doors by successfully working through a comprehensive education package that covers a range of topics including seals, timber and metal doors, ironmongery and glazing. They will have also been assessed by the scheme's independent certification body, EXOVA Warringtonfire, which will approve certification only when candidates have demonstrated in real life work situations that they have in-depth knowledge in inspecting fire doors, identifying any weaknesses and making informative and useful reports on the current situation and any remedial actions that must be

taken both to stay within the law and, more importantly, optimise safety for the buildings' occupants.

A vital part of fire doors can be locks so MLA members may want to consider becoming certificated fire door inspectors to demonstrate to their clients that they have the competence to fit locks to fire doors without jeopardising safety in the event of a fire.

Alternatively members can use the FDIS database available through the FDIS website to find a certificated inspector to help your clients undertake risk assessments or provide an independent review of their own work.

The importance of fire doors will continue to be promoted strongly by the FDIS from its launch date onwards. We

must get across to building owners, facilities managers and others their role in the 'circle of responsibility' and the horrific consequences if they do not get it right.

The fatal fire at the Penhallow Hotel in Newquay in 2007 is still very fresh in the industry's memory. The tragic fire, described as the worst hotel fire in nearly 40 years, resulted in the loss of three lives and prompted a BBC TV 'Inside Out' programme into fire safety in hotels. We do not want to see a repeat of those problems, and your support for the Fire Door Inspection Scheme will help to save lives.

More information on the scheme is available at www.fdis.co.uk or by calling 0844 801 1518

DESIGNED TO BE LOCKED UP

Lock related standards overview

At any given time there are approximately 30,000 standards within the UK and many more European standards being used covering a wide range of products and services. Standards are under constant review to make sure they are relevant and do not contradict each other. Standards provide the test criteria for independent test houses (such as Sold Secure) to accredit products and confirm they have been manufactured to a minimum requirement. The following overview is a breakdown of locksmith related standards (not exclusively) that people working within the industry should at least be aware of and ideally know what standards apply and when.

BS 3621 2007 + A1 2009

Title: *Thief Resistant Lock Assembly. Key Egress*

The original lock standard first drafted in the 1960's and still the base for all of the lock standards that are cross referenced in it. 3621 was intended for 5 lever mortice locks fitted to wooden doors and is intended to be used on domestic properties. The key-key application of this locking device makes it unsuitable for properties with single exits. The latest version was amended in late 2009 to satisfy legal issues within the wording of the document. The UK was able to retain the following BS standards because of the GVA that was not included in BS EN 12209 and BS EN 1303 however BS 3621 was brought into line with 12209 and 1303 in 2004.

BS 8621 2007 + A1 2009

Title: *Thief Resistant Lock Assembly. Keyless Egress*

Introduced in 2004, 8621 has the same test criteria as 3621 but is intended for use on locking devices that require no key to achieve egress. Single exit and multiple occupancy dwellings require keyless egress as per fire regulations. The 2009 amendments were as per 3621.

BS 10621 2007 +A1 2009

Title: *Thief Resistant Lock Assembly. Dual Mode*

Introduced in 2007, 10621 also has the same test criteria as 3621 and is a hybrid of the two previous standards. 10621 locks should not be used in single exit dwellings because of the entrapment possibilities. Amendments made in 3621 and 8621 in 2009 are mirrored here.

PAS 24 2007 + A1 2009

Title: *Enhanced Security Performance Requirements for Door Assemblies.*

Adapted with input from Secure by Design, PAS 24 is intended to provide the minimum requirements for whole

door sets in new build dwellings. PAS 24 takes into consideration all aspects of a door including fixings and hinges etc. The lock requirements cross reference to 3621, 8621 etc. PAS 24 is being rewritten to include BS 7950 early in 2012.

TS 621 2011

Title: *Thief Resistant Electromechanically Operated Lock Assemblies*

A technical specification that describes performance requirements for single or multipoint thief resistant electromechanical lock assemblies including the lock interface, striking plate, fixing screws, fitting instructions and where appropriate, cylinders and protective furniture.

BS EN 12209 2003

Title: *Building Hardware - Locks and Latches - Mechanically Operated Locks, Latches and Locking Plates-Requirements and Test Methods*

This European standard covers requirements and test methods for all types of mechanical lock or latch (including associated or separately supplied locking plates), intended for use on pedestrian doors in buildings but excludes electro-mechanically operated locks and striking plates, multi-point locks and their locking plates, locks for windows, padlocks, locks for safes, furniture locks and prison locks. This standard is in harmony with the *621 series of standards apart from the GVA that is unique to the UK.

BS EN 1303 2005

Title: *Cylinders for Locks-Requirements and Test Methods*

This European standard introduced in 2005 is for cylinders only. The test methods are in line with the *621 series of standards except for the GVA.

PAS 3621:2011

Title: *Multipoint locking assemblies - Keyed egress*

A family of standards that mirrors BS 3621 but for multipoint locks.

PAS 8621:2011

Title: *Multipoint locking assemblies - Keyless egress*

PAS 10621: 2011

Title: *Multipoint locking assemblies - Dual mode egress*

TS 007: 2011

Title: *Enhanced security performance requirements for replacement cylinders and or associated security furniture*

A DHF technical specification that tests for security of cylinders or a combination of security handles and

cylinders together. A star rated system that needs three stars for the minimum requirement can be achieved with either a three star rated cylinder or a one star rated cylinder and two star rated handle.

BS EN 1125:2008

Title: *Building Hardware. Panic Exit Devices Operated by a Horizontal Bar, for use on Escape Routes. Requirements and Test Methods*

Experience relating to escape from buildings and general safety have made it desirable that doors at exits in public buildings, places of entertainment, shops etc., should be fitted with panic devices operated by a horizontal bar. The emphasis for products covered by this standard is on safe exit rather than security.

BS EN 179: 2008

Title: *Building Hardware. Emergency Exit Devices Operated by a Lever Handle or Push Pad, for use on Escape Routes. Requirements and Test Methods*

This standard covers devices to be used in emergency situations where people are familiar with the emergency exit and its hardware and therefore a panic situation is most unlikely to develop. Lever handle operated escape mortice locks or push pads may therefore be used.

BS EN 12320: 2001

Title: *Building Hardware, Padlocks and Padlock Fittings.*

This European standard specifies performance requirements and describes test methods for strength, security, functions and corrosion of padlocks and padlock fittings used in building applications, but excluding cables and chains.

Requirements which relate to security are classified in six grades, based on performance tests that simulate attack. Human intervention, durability, manipulation and picking tests are not included in this standard.

BS EN 14450:2005

Title: *Secure storage units. Requirements, classification and methods of test for resistance to burglary. Secure safe cabinets*

This European standard specifies performance requirements and describes test methods for strength and security functions of secure safe cabinets to S1 and S2.

BS EN 14846:2008

Title: *Building Hardware – Locks and Latches – Electromechanically Operated Locks and Striking Plates*

BS EN 1627 – 1630: 2011

Title: *Pedestrian doorsets, windows, curtain walling, grilles and shutters. Burglar resistance.*

Sold Secure

Sold Secure is an independent test house that has its own test specifications based on the standards listed (sometimes

using several standards in one specification). Sold Secure has 40+ specifications that are constantly reviewed by industry stakeholders and is recognised by Police groups (ACPO), Insurers and other test houses. Some of the locksmith related specifications include:

SS 301 – *Specification for Mechanical Security Systems for Domestic Buildings*

SS 304 – *Specification for Domestic Safes*

SS 306 – *Specification for Mechanical, Domestic Door and Window Security Systems*

SS 308 – *Specification for Mechanical, Commercial Doors and Window Security Systems*

SS 312 – *Specification for Cylinders for Locks*

Including the new Diamond level that tests cylinders against snapping. Secure by Design recommend SS 312 Diamond cylinders. SS 312 is a stand alone cylinder test that improves security just by changing the cylinder.

SS 314 – *Specification for Security Cabinets*

Other standards used for reference

BS 5357 *Code of practice for installation of security glazing*

BS 5544 *Specification for anti-bandit glazing (glazing resistant to manual attack)*

BS 6206. *Specification for impact performance requirements for flat safety glass and safety plastics for use in buildings*

BS 6262 *Part 4 Glazing in buildings – Safety related to human impact.*

BS 7950 *Specification for enhanced security performance of casement and tilt/turn windows for domestic applications*

BS 8213-4 *Windows, doors and roof lights Part 4. Code of practice for the installation of replacement windows and doorsets in dwellings*

BS 8220-1 *Guide for security of buildings against crime – Part 1. Dwellings*

BS EN 1906 *Building hardware – Lever handles and knob furniture – Requirements and test methods*

BS EN 1935 *Building hardware- Single-axis hinges – Requirements and test methods*

BS EN 13724 *Postal services – Apertures of private letter plates – Requirements and test methods*

Locksmith related standards in development (titles and numbers to be confirmed)

pr EN 15865 *Building Hardware – Requirements and Test Methods – Multipoint Locks, Latches and Locking Plates*

DHF extends BS 3621 Kitemark standard to domestic multipoint and key-free locks

A significant extension to the BS 3621 Kitemark security specification marks a major step forward in enhanced home security, said the Door & Hardware Federation (DHF).

The Kitemark has been extended to cover both multipoint locks and key-free electro-mechanical locks now that the new standards - PAS 3621:2011 and DHF TS 621:2011 - have been published.

The standards programme has been driven forward by the DHF, which represents all the UK's leading lock makers. The federation pointed out that the BS 3621 family of Kitemark standards for singlepoint locks has long been the "gold standard" for domestic door lock security.

The publication of the new thief-resistant lock standards means that locksmiths, police crime prevention officers and security specialists can recommend locks to 3621 Kitemark performance levels for all types of domestic door locks, whether single point, multipoint or electro-mechanical.

Said DHF executive chairman Bob Perry: "The BS 3621 Kitemark has been recognised as the top security benchmark for singlepoint locks by the police, insurance companies and security specialists for the past 40 years.

"But times move on, and many homes now have PVCu or composite external doors and patio doors with multipoint locks. Increasingly, householders are looking for 'smart' key-free locks for their homes.

"We recognised the importance of developing standards for these types of lock that offer the same security performance levels as BS 3621 does for singlepoint locks. The end result is that an extremely high level of domestic security can now be offered by lockmakers, regardless of the type of lock that is fitted to external doors."

The PAS 3621 standard has been prepared by BSI and sponsored by the DHF, Yale, Era (part of Grouphomesafe) and Secured by Design, the police-managed crime prevention initiative.

It applies to all types of multipoint locks. PAS 3621 refers to locks that can be operated from both sides of the door. PAS 8621 refers to locks where the door can be locked by the key from the outside only, but always can be opened from the inside. PAS 10621 refers to dual mode lock types that offer the so-called "going on holiday" option of disabling keyless egress from the outside.

This PAS 3621 family of standards offers the same level of security performance as the BS 3621 family of standards and the same resistance to methods of cylinder attack such as bumping, snapping, picking and drilling.

The DHF TS 621 is a Technical Specification covering all types of smart or key-free locks operated by remote fobs or other keyless entry methods such as keypads. It offers the same level of security performance as the BS 3621 family of standards. In addition, there is no loss of security protection if voltage drops or electricity wires are cut, and resists other forms of electronic attack techniques.

MLA Annual Banquet and Awards

The MLA's Annual Banquet was once again held at the Western Region this year. An excellent event as usual; it included a full schedule of training days on the Friday and Saturday, a small exhibition area on the Saturday and Sunday and the region's Annual General Meeting on the Sunday.

At the banquet the MLA's 2 prestigious prizes were awarded.

Firstly the Chubb Award

This most prestigious and well recognised award within the industry, is bestowed by the board of directors of the MLA on the person they feel has done the most to further the locksmithing profession in the previous year. The recipient in 2011 was Clive Stone. The photo below shows the award being presented to Clive by the MLA's then President Val Stokes".

Then the Nigel Rose Bowl

This award is for the person with the highest marks in the BLI exam. This year saw Andy Stokes of Stokes & Sons in Cheltenham win the coveted prize. The photo below shows the award being handed over by Nigel Rose himself to the well deserving Andy.

Congratulations to them both from all of us at the MLA.

MLA Code of Practice

OBJECTS

The Objects of the Association shall be as stated in the Memorandum and Articles of the Association.

The following is a summary of some of these objects:

- a) To protect, preserve, promote and represent persons, firms or bodies engaged in the locksmithing industry.
- b) To advance education and training.
- c) To agree standards of conduct, practice and materials.
- d) To maintain a high standard by members for the protection of the public at large.
- e) To enable the Association to attain a recognised status.
- f) To prescribe, regulate and conduct examinations and to charge fees, award qualifications.
- g) To carry on business as technical locksmiths, security consultants, specialist wholesalers, retailers and dealers in locksmithing tools, equipment and members' services.
- h) To apply for, purchase or otherwise acquire patents and licences.
- i) To produce, publish and distribute a journal.
- j) Co-operate with any body for the purpose of promoting the association.
- k) To purchase or lease property and/or rights for the purpose of the association.
- l) To do all such other things as are incidental to the attainment and furtherance of the said objects or any of them.

CODE OF ETHICS

To assist the achievement of the above Objectives, Each member of the Association, by his acceptance and continued membership thereof, shall be deemed to have subscribed to the following:

- 1) To pursue his activities, conforming to professional standards and maintaining high ideals of personal honesty and integrity.
- 2) To abide by the policies and codes of practice of the Association, as established from time to time.
- 3) To analyse impartially and to the best of his ability, security problems receiving his attention and to advance the best possible solution for the protection of his clients.
- 4) To conduct himself in a dignified manner and to refrain from using improper or unprofessional methods in furthering his business.
- 5) To co-operate in advancing the best interests of the locksmithing and keycutting industry, always ready

to apply his special knowledge, skill and training for the use and improvement and betterment of his profession.

- 6) To encourage and promote loyalty in his profession by acting in a fair, reasonable and business-like manner in any dealings, especially those with any fellow member

INTRODUCTION

MLA Approved Companies' management and staff should provide products and services with skill and integrity. They should give all end-users the benefit of their experience in all aspects of security products and their applications.

There are five main areas of locksmithing services and the following codes are intended to clearly state a company's obligation to identify and interpret the requirements of the customer and to provide a fair and honest service to meet those requirements.

The codes also highlight specific exceptions that can occur due to the technical nature of some aspects of locksmithing and it is considered by the MLA to be fair that customers are made aware of these exceptions.

It is essential that the customer understands that the service or product does meet with their requirements and that they are aware of the costs or charges, either in writing or verbally and that they are also aware (if applicable) of the likelihood of any additional costs.

Certain lock and key systems are protected by law and replacement or extra keys will not be duplicated without the correct authorisation procedure. The company is obliged to operate these procedures to comply with law and in the best public interests.

INSTALLATIONS

MLA Approved Companies will be inspected periodically to stringent standards. Companies are dedicated to provide skilled and accurate workmanship, and are positively encouraged to maintain standards in Training, Equipment and Best Practices.

All companies must be properly insured to carry out security installations on, or to, a customer's premises.

Exceptions will occur if any alteration, amendment, removal or reinstallation is attempted by any persons

other than the original installing company. This also applies if any undue wear and tear, abuse or act of vandalism is apparent.

If product failure or faulty workmanship causes a Lock-Out the company may reserve the right to ascertain the cause and carry out any appropriate rectification, also to make charges where applicable, having first advised the customer. Liability is limited to replacement value only of the same or similar equivalent product and in all cases limited to the guarantee periods.

VOLUNTARY CODE OF PRACTICE FOR CUTTING VEHICLE KEYS

This code suggests that you ask the customer to fill in the appropriate form and prove their identity under the following circumstances:

1. If a customer produces a vehicle part, for example - a door lock, petrol cap or ignition barrel.
2. If a customer provides a key number.

Customers should be asked to fill in the form and prove identity before you cut the key or order the key from a supplier.

The form can also be used in the case of key duplication when the member is uncertain that the customer is the rightful owner of the car.

If a member has regular customers that produce parts to cut keys for, it is recommended that the member has a brief record showing the date each key was cut and the registration number of the car.

It is the company's responsibility to get a form completed by the customer even if a key is ordered from one of the service providers; they will assume you have completed the formalities.

CODE OF PRACTICE FOR THE DUPLICATION AND/OR SUPPLY OF KEYS

This Code of Practice is effective from 1 January 2000 and supersedes all previous instructions/directions.

SECTION ONE - SCOPE

The Code of Practice shall apply to the duplication and/or supply of keys, whether on manufacturers original blanks or substitute blanks available from any legal source.

NOTE: It is expected that members, when asked to duplicate and/or supply keys, will (1) uphold the integrity of the Association and (2) protect themselves against the possibility of claims for damages by an authorised keyholder, should the member duplicate and/or supply a key to an unauthorised person.

SECTION TWO - PROHIBITED KEYS

Members are advised that it is illegal to duplicate keys which are protected by a current Patent and should never knowingly duplicate keys in contravention of the above.

SECTION THREE - DUPLICATION OF KEYS

These instructions apply to the duplication of keys, whether by hand or by machine, or cut to code, and/or supply of keys of the following types:

- (1) All keys identifiable as safe keys.
- (2) Master keys, Sub-Master keys, Sub-Grand Master keys and Grand Master keys.
- (3) Any key cut on a Restricted or Special Section profile blank and known to be used for master suites, restricted or registered keys.

SECTION FOUR - AUTHORITY TO DUPLICATE

The duplication and/or supply of such keys must only be carried out against a properly completed authorisation, such as the MLA "Authorisation for the Supply of Keys" form.

Alternatively, a properly constituted written customer's authorisation is acceptable. This must be on headed notepaper or a customer's official order form, detailing the following:

- (a) Name, address and telephone number of the owner.
- (b) Name and address of the member requested to duplicate and/or supply the keys.
- (c) Quantity and type of key(s) to be supplied.
- (d) Markings (if any) to be put on such keys.
- (e) The signature of the owner or his representative, with the name also printed in capital letters and the signatory's position within the organisation.
- (f) Date of order.

A member requested to duplicate and/or supply such keys must be satisfied beyond all reasonable doubt as to the authenticity of both the authorisation presented and the identity of the person presenting the authorisation.

In the event of any doubt whatsoever, it is the responsibility of the member being requested to duplicate and/or supply security keys to check with the owner as defined, the authenticity of such an authorisation and to check the credentials of the individual presenting same. Full details of such investigations must be retained for a period of not less than two years.

SECTION FIVE - RECORDS

All members duplicating and/or supplying such keys must keep, for a period of not less than two years, all authorisation forms and letters. These are to be made available:

- (a) To the MLA Council upon request, to ensure that these instructions are being upheld or to assist in investigating complaints.
- (b) To a manufacturer of such keys, to prove that these instructions are being upheld and to assist in investigating complaints.
- (c) To an officer of the Police Force, Military Police, Customs and Excise, Inland Revenue or any similar authority acting in the investigation of crime.

SECTION SIX - CONTROL OF KEY BLANKS

Blanks for keys of a restricted section profile must be kept separately from standard blanks.

Under no circumstances may any restricted section profile blanks be altered to fit another section, nor may any blank be knowingly altered to fit a cylinder which the member believes to be of a restricted type. There are no exceptions to this rule.

Under no circumstances are blanks for security keys to be disposed of or sold to any third party without an official authorisation requesting such blanks and a copy of the owner's authorisation for the duplication of such keys.

CODE OF PRACTICE FOR OPENING & GAINING ENTRY TO BUILDINGS, VEHICLES & CONTAINERS

THIS CODE OF PRACTICE IS EFFECTIVE FROM 1 OCTOBER 1996 AND SUPERSEDES ALL PREVIOUS INSTRUCTION/DIRECTIONS.

SECTION ONE - SCOPE

The Code of Practice shall apply to any requests within a trading arrangement to open or effect entry into or onto all

types of buildings sites, or property including vehicles, all types of containers, safes, cash boxes, cabinets and desks, any type of lockable or security devices.

**SECTION TWO - PROOF OF AUTHORITY
Commercial or Industrial Premises**

Proof of authority must consist of the following

- a) Official Order or Letter of Authority stating clearly the date, the address at which the service is required with precise instructions of the service required and who the authorised site contact will be.
- b) Faxed Authority as in (a) above.

Private Dwellings

One or more of the following:

- a) Driving Licence showing address of premises.
- b) Passport or other acceptable means of identity or
- c) Neighbour identification.
- d) Police presence.

Vehicles

One or more of the following:

- a) Driving Licence showing home address quoted
- b) Passport or other acceptable means of identity or
- c) Vehicle registration documents.
- d) Police or road Association presence.

There are 4 other sections which deal with advice to members on how to verify the customers authority to request this service. It is therefore inappropriate to disclose these security measures. Any person having need of this information may apply to the MLA's Head Office stating the reason for the request.

MLA Guidelines for minimum security for domestic property

INTRODUCTION

Theft from domestic property causes major problems for the Insurance industry and for specifiers of security products who might not be familiar with the industries involved. The reasons for these guidelines are:

the Insurers possible requirement on a policy holder to maintain a minimum level of security to protect their premises, to use it when the premises are unattended or in part when they are occupied.

the general obligation of householders to take reasonable security precautions for their own good.

to provide easily understood information for the use of those not familiar with the Security or Insurance industries.

These guidelines are not intended to be applied to new construction or major refurbishment. For these applications British Standards **BS 7950:1997** with Amendment 3, **Specification for enhanced security performance of casement and tilt/turn windows for domestic applications** and **PAS 24:2007+A1:2009 Enhanced security performance requirements for door assemblies, Single leaf, external door assemblies to dwellings** apply. These specifications are based on complete doorsets and window assemblies i.e. the door or window, including frame, hinges, locks, and fixings as a whole unit. The specifier is recommended to obtain doors and windows certified to these specifications.

Further guidance is given in **BS 8220-1: Guide for security of buildings against crime – Part 1:2000 - Dwellings**

Currently European specifications **EN 1627-1630** also exist for the security of doors, windows and shutters. Products certified to the appropriate grades of these specifications are equally suitable.

These Guidelines assume that occupants are all able bodied. For users with disabilities, seek professional guidance before any installation.

Every attempt is made in these guidelines to be as practical as possible with recommendation or the specification of products, but there will always be occasions where alternatives will need to be sought because of the nature of a particular design, size or other feature of a door or window to be secured. In these circumstances the advice of a specialist in this field should be taken. A member of the Trade Division of The Master Locksmiths Association (denoted as "MLA approved company" and accompanied by the MLA registration number) should be contacted for such advice which should then be checked with the Insurers where applicable.

To comply with the requirements of most Insurers for thief resistant lock assemblies that necessitate the use of a key for egress, it is generally accepted that locks used on traditional external timber doors are certified to **BS 3621:2007+A1:2009 Thief resistant lock assemblies – Keyed egress**. This indicates that the lock is part of an on-going test and audit programme to show it meets the requirements.

The MLA recommends that locks conforming to the latest version of any standard are to be used, however the MLA also recognises that insurers will on occasion accept locks, already installed that conform to earlier versions.

Where there is a requirement for means of escape (from fire) from the inside without the use of a key while maintaining security from the outside, lock assemblies to **BS 8621:2007+A1:2009 Thief resistant lock assemblies – Keyless egress** should be installed.

Certifying to BS 8621 commenced in April 2005 and lock assemblies certified as complying with this Standard are listed within the links in Appendix C.

The introduction of new materials (e.g. Aluminium, PVC-U and Composite Materials) and designs used in the construction of doors and windows can make single point locking inadequate. The locks designed for these types of door are usually multi-point and therefore cannot be tested to BS 3621, BS 8621 or BS 10621. PAS 3621, PAS 8621 and PAS 10621 were published in 2011 and will provide minimum requirements for multi-point locks to be tested to. Locks produced prior to this date should have a minimum of three locking points and use a cylinder that meets the minimum requirement stated in 3 (b).

Nothing in this document or related documents shall imply that the installation of any security device will prevent unauthorised entry to a premise or that by following these guidelines insurers are obliged to issue insurance cover.

Note: These Guidelines give a general description of security for domestic buildings. Neither the guidelines nor the list guarantees that these methods are suitable for specific applications. It is the responsibility of the equipment supplier and/or equipment purchaser to ensure that any system is suitable for its particular application and that it complies with all legislation, standards, codes of practice or any other requirement.

Every effort has been made to ensure the contents of these Guidelines are accurate, however the Master Locksmiths Association does not accept any responsibility for loss arising from decisions based upon them.

GENERAL CONSIDERATIONS

When considering the matter of minimum security requirements and the interpretation of these guidelines, users of these guidelines should be mindful of a number of factors:

(a) The adequacy of the door or window, frame thickness and the material quality together with the fixings of the frames to the surrounding structure might impact on the level of security provided.

(b) A degree of flexibility when imposing security requirements might, on occasions be necessary. Often, due to the nature of the door or window construction, or the material from which it is constructed, it might require the use of locks or locking devices in situations other than that for which they were intended. In such circumstances the advice of a Trade member of the Master Locksmiths Association should be sought, and written confirmation of their proposals obtained from any interested insurer.

(c) If improvements are required to the security of aluminium, PVC-U or composite material doors or windows it is stressed that this work should be undertaken by professionals. Again advice must be sought from an Approved Company Member of the Master Locksmiths Association who has experience in this type of work. Care should be taken not to breach manufacturers' warranties that might still apply.

(d) It must also be appreciated that some locks not certified to BS 3621 have in the past and could in the future be accepted by Insurers. Where this is the case, written confirmation by the Insurers of their acceptance of the product for its intended use should be obtained by the end-user. This recommendation also applies with the introduction of lock assemblies under BS 8621 and BS 10621.

(e) Insurers and specifiers should be mindful of possible conflict between occupier safety and security when the property is occupied. Careful consideration must be given to the means of escape in the event of fire before specifying that locks should be engaged and the keys removed (using BS 3621:2007+A1:2009 specification) before retiring for the night. Keys should be kept within easy reach of the occupant, but out of reach of an intruder.

If in doubt, consult any interested insurer and the local Fire Prevention Officer for guidance.

(f) External doors that are deemed to be used as an exit in case of an emergency should be locked in the manner specified for the final exit door, with the addition of a nightlatch that can be opened from the inside without the use of a key for use when the property is occupied. Where locks to BS 8621:2007+A1:2009 are fitted, egress will be facilitated from the inside by the presence of the thumb turn.

(g) In blocks of flats and other buildings of multiple occupancy, the means of escape in the event of fire is an important consideration, particularly where the entrance door to the individual flat is the only means of escape. The use of Escape Locks that can be opened from the inside by a single action without the use of a key (but still retain their security from outside as described in BS 8621) is acceptable to Insurers subject to written confirmation. This type of lock will normally meet the requirements of the Building Regulations.

(h) New products may become available that conform to test procedures for security products, and carry the appropriate certification mark. When these are accepted by the organisations supporting these guidelines, and where suitable for the protection of a particular risk, their use should be encouraged.

(i) When making recommendations for the fitting of security items, consideration must be given to the type of risk involved relevant to the location of the premises. It will be necessary to increase the number of locks and fittings to doors and windows in high-risk areas. Advice should be sought from the local Crime Prevention Design Adviser, Architectural Liaison Officer, any interested insurer involved or an Approved Company Member of the Master Locksmiths Association.

(j) A list of Approved Company Members of the Master Locksmiths Association, recognisable by the logo "MLA Approved Company" is available from the Master Locksmiths Association. This list is also reproduced and updated on our website www.locksmiths.co.uk

MINIMUM SECURITY REQUIREMENTS

(a) Locks currently available certified to British Standard BS 3621, BS 8621 or BS 10621 should bear the standard number and the mark of the certification agency. These are listed in the web links in Appendix C. Such locks may be available in rim or mortice fixing. Locks for PVC-U and composite doors (when multi-point) should meet the minimum requirement set out in PAS 3621, PAS 8621 and PAS 10621 published in 2011. Locks produced prior to this date should have at least three locking points and be combined with a cylinder that meets the requirements of 3(b). Locks that have been part of a PAS 24 door test are also acceptable. Written agreement for the acceptance of such locks should be obtained from the insurer by the policyholder.

(b) Lock cylinders installed before the implementation of these guidelines (November 1999) should have a minimum of five pins and an anti-drill insert. Thereafter, as a minimum requirement the cylinder shall meet the requirements of BS EN 1303:1998 Clause 6.7 Security Grade 4 (Table 10) or BS EN 1303:2005. Clause 6.8 Key related security Grade 5 (Table 9) and Clause 6.9 Attack resistance Grade 2 (Table 10). Technical specifications SS 312 and TS 007 were published in 2010 and 2011 respectively and are to be used when doors are at risk of cylinder attack and may be a requirement by some authorities.

(c) Where any cylinder operated lock is used, the outside cylinder shall not protrude more than 3 mm from the face of the door or the lock furniture (handle plate or cylinder rose) where fitted. Lock furniture should be of the 'bolt through' type with the fixings being secured from the internal side only. Lock furniture should comply with **BS EN 1906 Lever handles and knob furniture** – Requirements and test methods – Annex A: Requirements for security lock furniture for use on burglary resistant doors – Grade 1 unless certified as a component of a door assembly satisfactorily tested to PAS 24. Lock furniture may consist of separate components of lever/knob handles on roses and cylinder roses or composite backplates. Where cylinder roses are fitted, these must

provide the cylinder protection as required under BS 3621, BS 8621 or BS 10621.

(d) A limited range of other door locks, and most types of lockable bolt or window locks, are likely to be acceptable to insurers for the purpose of securing doors and windows. A proposed RISC Authority guidance document (due to be issued in 2012) on Minimum Security Standards for Domestic Properties will provide full details. This will be available for download from www.riscauthority.co.uk

HINGED DOOR SECURITY

The type of lock and the position to which it is fitted on the door is dictated by the design of the door. It is therefore not possible to make specific recommendations regarding the fixing positions of additional security devices, as this will be determined by the position of the original fittings on the door. The height at which the lock is fitted might also be determined by the level at which the user is standing when locking or unlocking the door, e.g. one or two steps below the door entry level.

For specific guidance reference should be made to **BS 8220 Guide for security of buildings against crime – Part 1:200 Dwellings**. However, the following is offered as a general guide:

Additional Mortice Deadlocks

Where the lock to be fitted is of the mortice type, the minimum thickness of the door to which it is being fitted must be 44 mm. The lock should be fitted approximately midway between the existing lock and the top or bottom of the door depending on which has the greatest unsecured distance, avoiding any cross rail or glazing bar joints.

Additional Mortice or Rim Security Bolts (Single Doors)

To be fitted horizontally (where possible) approximately midway between the top lock and the top of the door and the bottom lock and the bottom of the door.

Where a single lock conforming to the requirements of the insurance company is fitted, the additional bolts should be fitted approximately midway between it and the top and the bottom of the door.

Where bolts are fitted vertically they should be between 50 mm and 100 mm from the edge of the door, avoiding any joints.

For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts. Where doors do not form part of an escape route, loose key mortice bolts are suitable

Additional Mortice or Rim Security Bolts (Double Doors)

To be fitted vertically to the top and bottom of the doors between 50 mm and 100 mm from the front of the rebated edge of the door, avoiding any joints. It could be necessary to fit security bolts to the top and bottom of the first closing leaf

only, if the doors are of substantial construction.

For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts on the first opening leaf, the first closing leaf being secured by loose key bolts. Where doors do not form part of an escape route loose key mortice bolts are suitable for both leaves.

Hinge Bolts and Security Hinges

Hinge bolts shall be fitted to all outward opening doors at a position of approximately a quarter of the door height from the top and bottom of the door, but not within 150 mm of the top or bottom hinges.

Hinges for use on burglar-resistant doors should comply with BS EN 1935:2002 Annex C. These may comprise either such a design that the hinge pin can only be removed when the door is open, or alternatively, suitable composite security hinges incorporating hinge bolts within the hinge flap that enable the hinge to withstand shear loads should be considered.

Letter plates

Letter plates should be located with the aperture at least 400 mm away from any locks to stop access to the locking system through the aperture. The letter plate aperture should be in accordance with the requirements of **BS EN 13724: Postal services- Apertures of private letter boxes and letter plates – Requirements and test methods Type 4 size 2 - 230 – 280 mm wide x 30 – 40 mm high**. If these criteria cannot be achieved, additional measures might be needed to prevent access to door locks through the letter plate, such as the addition of internal security flaps or letter cages/internal postal boxes. Letter plates should be fitted horizontally at a height between 700 mm and 1700 mm measured from delivery floor level

Where the sole means of internally locking a door is hand (not key) operated, then it is recommended that the letter plate be omitted from the door. In this instance, alternative means for mail delivery shall be provided such as an external postal box complying with types 1, 2 or 3 of BS EN 13724:2002, in which case the aperture size will vary according to the dimensions of the postal box.

Stable Doors

Both halves of stable doors must be treated as separate doors.

WINDOW LOCKS

Where windows are not required to be opened, they may be screwed permanently shut. Security screws shall be used where this is to be done from the outside, and the heads countersunk and plugged.

The security of all ground floor and all accessible windows which are not considered as means of escape (e.g. from a flat roof) shall be considered. Openable windows that are over 600 mm high or wide should be fitted with a multi-point locking system or two window locks with removable keys. Sashes less than 600 mm need only be fitted with a single

lock.

Where a lock is to be fitted to a window care must be taken to ensure that the material to which the lock is fitted does not become weakened by fitting it too close to existing fittings.

Where a window is required for emergency egress then it shall not be fitted with any type of key lockable system. In this instance the window should be fitted with laminated glass.

Louvre windows

Urgent consideration should be given to replacing louvre windows as it is difficult to achieve adequate security. If this is not possible, then all panes of glass (in louvre windows) should be securely fixed, with suitable adhesive, into their brackets or suitable grilles, bars, or shutters fitted. Louvre windows should not be installed in vulnerable locations. The use of plastic frame materials is not acceptable for a security application

Casement Windows

Where the casement window opening exceeds 600 mm, two locks are required. For side-hung casements windows over 600 mm high the additional locks should be fitted approximately quarter of the height from the top and bottom of the casement window. For top-or bottom-hung fanlights in excess of 600 mm wide, the locks should be fitted approximately one quarter of the width of the opening fanlight from either side of the sash.

Tilt/Turn Windows

Additional locks should be fitted to the bottom rail at the leading edge for security and also to prevent the accidental opening of the window in the side hung mode.

Vertical Sliding Sash Windows

Where the window opening exceeds 600 mm, the locks should be fitted on the meeting rail of the bottom sash, at approximately one quarter of the width, or on the vertical frame either side of the upper sash, directly above the meeting rail of the bottom sash.

Where there is a requirement for ventilation when the premises are occupied, vertical sliding sash windows can be provided with restricting devices suitably placed to provide a ventilation position, to allow them to be opened a maximum of 100 mm and remain secure. This is not recommended when the premises are unoccupied. The window should then be secured in the fully closed position.

SLIDING DOORS AND WINDOWS

All sliding doors and windows should be fitted with anti-lift devices to prevent them being removed from their tracks. Care should be taken to ensure such devices are fitted

appropriately so that they do not go inside the section of the frame when the door/window is closed. Some sliding door locks have an in-built facility to prevent the door being lifted, e.g. swing hook bolts which rotate upwards to engage.

Additional locks fitted to sliding doors and windows should be fitted in such a manner as to ensure any force applied to open the door acts against the lock fixing screws.

Wherever possible, additional locks should be fitted to the top and bottom of the interlock of sliding doors and windows. However, there are some designs, which make this impractical.

Sliding doors/windows should not be secured in the ventilation position when the premises are unoccupied.

UP-AND-OVER DOORS

Work on improving the security of up-and-over doors should be undertaken by professionals who have experience in this type of work.

There are security locking products available for this type of door and the advice of a professional (MLA Trade Member) should be obtained prior to commencing improvements.

FRAME FIXING

It could be necessary in some instances to improve the strength of the fixings holding door or window frames to the fabric of the building. Due to the presence of pre-cast concrete, steel lintels or other construction details, it might not be possible to achieve the desired additional fixings to the head or sill of the frame. The type of fixings used will be determined by the material to be fixed and the material to which it is to be fixed, however frame-fixing screws and bolts are available for this purpose.

The following dimensions for the positions of additional fixings are offered as a guide.

Corner Fixings

Additional fixings made between 150 mm and 250 mm vertically and horizontally from the internal corners of the frame to be fixed.

Vertical and Horizontal Fixings

Additional fixings made at approximately 600 mm centres between the corner fixings of the frame to be fixed.

For greater detail of improved fixings, reference should be made to **BS 8213: Part 4:1990 Windows, doors and roof lights – Code of practice for the installation of replacement windows and doorsets in dwellings**

GLASS AND GLAZING

As far as security is concerned the main consideration is the ease with which glass can be broken to provide access to window or door hardware. The glazing specification chosen

should meet the design and performance requirements of **BS 6262:1982 Part 4 Glazing in buildings – Safety related to human impact**. For those installations where a higher degree of “security” is needed the glazing should be in accordance with **BS 5357 Code of practice for installation of security glazing**

There are three main types of glass. These are:

Annealed glass

Annealed glass consists of, float, sheet, cast (patterns) and wired glass. It breaks easily and when broken forms large sharp fragments. While wired glass can be fractured, it will act as a barrier but only until the wire mesh in the glass is sheared.

The application of an appropriate plastics film can increase the resistance of annealed glass to penetration

Toughened glass

Toughened glass, (tempered glass), is an annealed glass, except wired glass, that has been subjected to a heating and rapid cooling process that imparts a greater strength to the material. It is resistant to impact by blunt objects but can be fractured by penetration of the surface compressive layer. When fractured, the glass will not act as a barrier. In buildings it is usually found in ‘risk areas’ which include doors and adjacent windows, low windows, bathrooms, landings etc. Typically toughened glass is around eight times stronger than annealed glass but when it breaks it forms a multitude of small fragments. It is also vulnerable to breakage with a sharp point such as a centre punch.

Due to the method in which it breaks, toughened glass offers very little security. Its value is as a safety glass.

Laminated glass

Laminated glass consists of two or more layers of annealed glass bonded together by means of transparent plastic (poly vinyl butate - PVB) interlayers. When the glass is attacked the glass layers fracture but remain in place, held by the PVB interlayer. Thus laminated glass offers both increased security and safety over annealed glass. Typical laminated glass found in domestic buildings consists of two layers of glass and one interlayer to a total thickness of 6.4 mm (soon to increase to 6.8 mm). However, the number of glass layers and interlayers can be increased to provide enhanced security such that, eventually, bullet-proof glass can be produced.

The most common failure mechanism of laminated glass is for it to ‘balloon’ and fall out of the frame under repeated impacts. However, the time taken for this gives an enhanced level of security over other types of glass

Double glazing

Double glazing can be in the form of:-

1. insulating glass units i.e. two or more panes of glass hermetically sealed at their perimeter. These provide the

intruder with two or more panes to break.

2. double windows i.e. two separate single glazed windows in the same opening. These assemblies provide a similar deterrent but only if the inner window is secured.

Plastics glazing material

Plastics glazing sheet material consists of either a single sheet or combination of sheets laminated together. The performance of these materials is dependent on the polymer type, thickness, and support condition. The advice of the manufacturer should be sought in respect of their security and fire resistance performance, as appropriate.

Glazing

All glass or plastics glazing sheet material should be secured to the window or door structure in such a manner that it cannot be easily removed from the outside.

GLOSSARY

Anti-lift device. Device which prevents a door or window from being lifted in its aperture, where this lifting would decrease the effectiveness of a lock or enable the door/window to be removed.

Barrel bolt. Surface mounted fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening. The shoot is provided with a knob, loose key or similar for operation by hand.

Bolt (1). Movable part of a lock or latch that usually engages a component fixed to a frame and is withdrawn into the case,

Bolt (2). Fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the sliding part being provided with a knob, loose key or similar for operation. It may be surface mounted, or morticed.

Certified. A product subjected to a testing and ongoing audit programme by a MLA approved organisation.

Deadlock. Lock that contains only a deadbolt.

Escape lock. Deadlock that can be opened (even when locked) from the inside by a single action without use of a key.

Escutcheon. Surround with a shaped hole, with or without a pivoted cover plate, primarily to protect the door leaf from abrasion damage caused by key insertion. This could be for decorative purposes or to increase the security of the locking device.

Flush bolt. Recessed (flush) fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the moving part being provided with a lever, slide bar or knob.

Hasp and staple Two-piece fastening for doors which can be

secured by a padlock. The hasp could be attached to a fixed or swivel bar.

Hinge bolt. Fixed projection on the hinge side of the door or window. The projection engages into a keep when the door or window is closed. Also known as dog bolt

Latch. Self-engaging device, usually operable from both sides, which holds a door or window in the closed position and is released by hand without the use of a key.

Lock. Fastener that combines within one case a latch operated by a handle and a deadbolt which secures the door or window in the closed position

Mortice lock/bolt. Lock/bolt where its body is fitted in a mortice cut into the closing edge of the door or window.

Multi-point lock. Lock that has a latch bolt and a number of other bolts positioned remote from the lock case but connected by rods, which are thrown by means of a single action.

Night latch. Latch with a single bevel latch bolt that is operated internally by a knob and externally by a key which automatically engages when the door is shut.

Night vent or ventilation position. Position in which the door or window can be secured whilst slightly ajar. This usually offers only limited security.

Padbar A device spanning the full width of the door opening with supporting brackets or staples fixed to the frame and secured by a padlock

Padbolt/padlock bolt. Door bolt which can be secured in the locked position by means of a padlock.

Rim lock/bolt. Lock/bolt for fixing on the face of a door or window.

Security bolt. Mortice or barrel bolt which can only be withdrawn by the use of a key.

Security screw. Screw designed so that it either cannot be removed when fixed or which requires a restricted access tool to remove it.

Strike plate. Flat metal plate, appropriate to the latch or lock, fixed to a frame to engage a bolt(s).

Throw - bolts with linear movement - Distance that the dead bolt travels from the fore end of the lock in an outward direction under the action of a key, measured perpendicular to the fore end.

Throw - hook bolts with arctuate movement. - Distance from the tip of the bolt travels from the unlocked to the locked position measured parallel to the fore end of the lock.

STANDARDS

The following standards are referred to in the text. The latest version of the standard shall be used.

BS 3621. Thief resistant lock assemblies – Keyed egress.

BS 5357. Code of practice for installation of security glazing.

BS 5544. Specification for anti-bandit glazing (glazing resistant to manual attack).

TS 621. Thief resistant electromechanically operated lock assemblies.

BS 6206. Specification for impact performance requirements for flat safety glass and safety plastics for use in buildings.

BS 6262. Part 4 Glazing in buildings – Safety related to human impact.

BS 7950. Specification for enhanced security performance of casement and tilt/turn windows for domestic applications.

BS 8213-4. Windows, doors and roof lights Part 4. Code of practice for the installation of replacement windows and doorsets in dwellings.

BS 8220-1. Guide for security of buildings against crime – Part 1. Dwellings.

BS 8621. Thief resistant lock assemblies – Keyless egress.

BS 10621. Thief resistant lock assemblies – Dual mode.

PAS 24. Enhanced security performance requirements for door assemblies – Part 1. Single leaf, external door assemblies to dwellings.

PAS 3621. Multi point locking assemblies – keyed egress.

PAS 8621. Multi point locking assemblies – keyless egress.

PAS 10621. Multi point locking assemblies – dual mode.

BS EN 12209. Building hardware – locks and latches.

BS EN 1303. Building hardware - Cylinders for locks.

BS EN 1906. Building hardware – Lever handles and knob furniture.

BS EN 1935. Building hardware- Single-axis hinges.

BS EN 12320. Building hardware - Padlocks and padlock fittings.

BS EN 13724. Postal services – Apertures of private letter plates.

EN 1627-1630. Windows, doors, shutters - Burglar resistance.

SS 306 Sold Secure Specification for Mechanical, Domestic Door Security Systems.

SS 312 Sold Secure Specification for Cylinders for Locks

DHF TS 007 Enhanced Security Performance Requirements for Replacement Cylinders and/or Associated Security Furniture

APPENDIX A

Specification of acceptable hardware

- A) All doors — Hinge bolts or security hinges with protection from hinge pin removal on all outward opening doors.
- B) All doors — A lock certified to BS 3621, BS 8621 and BS 10621 together with its approved striking or box plate and accessories as tested.
- C) All doors — An acceptable alternative lock with the lock manufacturers approved striking or box plate and accessories as approved by the Insurers.
- D) Single door pedestrian garage doors — A multi-point lock system with a minimum of three horizontal locking points with a central bolt (minimum throw 13 mm) and two dead or hook bolts (minimum throw 20 mm). All locked simultaneously by one operation of the key. Alternatively a multi-point lock certified to Sold Secure specification SS 306.
- E) Sliding — Anti-lift devices
- F) Sliding — Main locking system plus key operated patio door lock or security bolts (minimum throw 9 mm) at the interlock at bottom of the door and if practical at the top of the door. Alternatively a patio bar.
- G) Sliding — A hook lock certified to BS 3621 or BS 8621 together with its approved striking plate and accessories as tested
- H) Sliding — A multi-point lock system with a minimum of three horizontal locking points Incorporating hook bolts (minimum throw 20 mm) and/or vertical shoot bolts (minimum throw 14 mm) locking into the head and sill of the door frame. All locked simultaneously by one operation of the key. Alternatively a multi-point lock certified to Sold Secure specification SS 306
- J) Double doors, 2nd closing leaf (casement doors) — The main locking system plus 2 key-operated rim or mortice security bolts (minimum throw 14 mm)
- L) Double doors, 1st closing leaf (casement doors)/ Windows — Two key operated rim or mortice security bolts (minimum throw 14 mm)
- M) Double doors, 1st closing leaf — Two flush bolts (minimum throw 14 mm) mounted on door edge and concealed when doors are closed
- N) Double doors — A multi-point lock system with a minimum of three locking points with a central 2nd closing leaf bolt (minimum throw 13 mm) and two dead or hook bolts locking into the head and sill of the door frame (minimum throw 14 mm). All locked simultaneously by one operation of the key. Or a multi-point lock certified to Sold Secure specification SS 306
- P) Windows — A window lock with removable key
- Q) Windows — A substantial locking handle with removable key
- S) Windows — A multi-point locking system with removable key
- T) Doors — A door-set certified to PAS 24 or ENV 1627 class 2
- U) Windows — A window certified to BS 7950 or ENV 1627 class 2
- V) Doors to — A heavy duty padbar bolted to the door and frame and fitted with a padlock outbuildings and fittings certified to EN 12320 Grade 3

APPENDIX B

Hardware required to be fitted (as listed in Appendix A)

Hinged final exit door — A plus B, C or D, or T
Other single hinged external doors — A plus B, C or D, plus L (2 off), or T
Pedestrian doors on garages and domestic outbuildings — A plus B, C, D or V, or T
Double doors (1st closing door) — A plus L (2 off) or M (2 off)
Double doors (2nd closing door) — A plus B, J or N
Sliding doors — E plus F C, G, or H
Louvre Windows — See text
Accessible windows and ground floor openings (But not emergency egress windows) — L, P, Q, S or U
A sash less than 600 mm in width or height requires a minimum of one locking point. For all other sashes a minimum of two locking points is required

APPENDIX C

Links to accredited products and services

Accredited products and services can be found at:

www.securedbydesign.com, www.kitemark.com

Other security related products including padlocks and outbuilding security products at:

www.soldsecure.com

Accredited products can be specified by your local MLA member. You can find a local member by visiting:

ACKNOWLEDGEMENTS

The Master Locksmiths Association is grateful to the following organisations for their support and assistance in drawing up these guidelines:

Association of Chief Police Officers (ACPO)
(Project & Design Group-Technical Committee).
British Hardware Federation
Builders' Merchants Federation (BMF)
Chief Fire Officers Association (CFOA)
Door and Hardware Federation (incorporating Door and Shutter Manufacturer's Association and Association of Building Hardware Manufacturers).
Glass and Glazing Federation (GGF)
Guild of Architectural Ironmongers (GAI)
Home Office Scientific Development Branch (HOSDB)
RISC Authority (UK insurers technical advice body)
Lloyds
Sold Secure (part of MLA Group)

Licensing the Professional Locksmith

The Master Locksmiths Association (MLA) is the leading Trade Association for the locksmithing industry.

In the absence of Government based licensing (meaning that anyone can call themselves a locksmith), the MLA can provide you with peace of mind through it's licensing scheme.

MLA licensed locksmith companies, who undergo strict vetting (including criminal record checks, regular inspections to ensure quality etc), are able to provide advice based on knowledge and experience, recommend products that are fit for purpose as well as provide professional installation and maintenance services.

The key to your security needs.

Find your nearest MLA approved locksmith by contacting the Association:

Tel: **0800 783 1498** · Fax: **01327 262539**

Web: **www.locksmiths.co.uk**

E-mail: **enquiries@locksmiths.co.uk**

The benefits of using an MLA licensed locksmith

- Leading Trade Association for the locksmithing industry
 - Not-for-profit organisation
 - Established over 50 years ago
 - Nationwide Membership
 - Promotes standards of conduct, practice and materials within locksmithing
 - Provides peace of mind to the end customer through its licensing scheme, in the absence of Government based licensing
 - Following a change to the law on the vetting of locksmiths implemented thanks to a campaign by the MLA, the only way for locksmiths to get standard Criminal Record disclosures is via Master Locksmiths Association membership
 - Various discounts available from participating MLA members (see website homepage for more information)
 - Standards are kept high by employment of qualified locksmiths, strict vetting and regular inspections. Training is also provided by the Association to ensure members are constantly up to date with the latest industry developments
 - Recognised as the authoritative body for locksmithing by:
 - Police
 - Home Office
 - British Standards Institute (BSI)
 - RISC Authority (formerly IPCRes, the UK property insurers' technical group)
 - Building Research Establishment (BRE)
 - MLA licensed locksmith companies are able to provide:
 - Advice based on knowledge and experience
 - Recommend products that are fit for purpose
 - Provide professional installation and maintenance services
 - A pricing policy to ensure fair and transparent prices are quoted before work commences
 - Channels of arbitration exist to fully investigate any complaints or disputes, should they arise, and the MLA advises or takes any necessary action depending on the outcome
 - Look out for the MLA Approved Company Logo
- Visit www.locksmiths.co.uk or call **0800 783 1498** to find out the details of your nearest MLA licensed locksmith.

Sold Secure, one of the leading suppliers of test and certification services for security related products, is delighted to sponsor this leaflet. Working with companies world-wide, we assess products to see whether strict performance criteria are met and where applicable allow the use of the coveted Sold Secure approved logo. When choosing your security products be sure to ask your MLA licensed locksmith if there is a Sold Secure approved product suitable for your particular needs.

ALDRIDGE SECURITY

Who are Aldridge?

- Aldridge are the largest Trade Only Security Wholesaler in the UK & Ireland with over 65 years experience in the industry.
- We hold in excess of 15,000 products in stock for same day despatch from our locations in London & Manchester.
- The Aldridge portfolio includes 200 major brands accommodating requirements for Access Control, Architectural Hardware, Master Keying, Locksmithing Tools & Accessories, Key Cutting, Multi Point Locking and Locking products.
- Aldridge are proud to be recognised as the largest distributor of Yale, Union and Evva products in the UK, in addition we are one of Silca's largest distributors of Key Blanks and Key Cutting machinery in the world.

RANGE

What is Asec?

- Asec is a recognised brand within the security industry offering the most comprehensive range of Security & Architectural products under the same brand name.

What does Asec offer?

- Asec offers a range of over 1,800 high quality and competitively priced products meticulously sourced from leading manufactures within the security industry.

Why choose Aldridge for Asec?

- Asec is a constantly evolving product range developed to satisfy your security and specification needs.

CYLINDERS

Who are Evva?

- Evva are a leading manufacturer of cylinders and master key systems with more than 90 years experience.

What does Evva offer?

- Evva offers basic and complex Master Keying solutions for all applications; Museums, Schools, Universities, Hospitals and Commercial Buildings across the UK and Europe utilise the Evva product.

Why choose Aldridge for Evva?

- Evva offers a comprehensive range of cylinders and sizes to suit all requirements.
- Evva offers systems to cater for high, medium or low security applications.
- Evva can be supplied with total key restriction (EPS range is Patented until 2026) ensuring that only authorised personnel are able to obtain additional keys.

ACCESS CONTROL

Why Choose Aldridge for Access Control?

- Aldridge have been selling Access Control products and Systems since 1971, when we became the first Locksmiths Wholesaler to introduce a dedicated Access Control division into our business.
- Aldridge offer a range of over 1,500 products from leading manufacturers including Paxton, Kaba, Videx, Trimec, Adams-Rite, Codelocks & Asec.
- Aldridge offer system design for Stand-Alone or Networked system.
- Aldridge also offer technical advice & support along with a be-spoke quotation service on a range of products from Digital Locks and Electronic Keypads to Audio/Visual Entry Systems and Proximity Readers.

ALPRO ARCHITECTURAL HARDWARE

ALPRO launch their new range of electric strikes — Innovation and quality at competitive prices

The Alpro Architectural Hardware Division of IEC Limited has announced the release of the new Alpro range of electric strikes.

The new range comprises the AL110 (an ANSI style footprint) strike, along with the AL2000 series of monitored strikes and the AL150 range of rim strikes. All the products within this range have been independently tested and test information on the high holding forces is available on request.

Available in fail safe and fail secure versions and AC (using the RM1 rectifier) and DC compatible together with variable 12v or 24v inputs, the range boasts a rapid and innovative change over function from fail safe to fail secure.

The strikes are available with long or short stainless steel faceplates as standard and extension lips of 15mm, 25mm, 50mm and 75mm. The strike is complete with a comprehensive fixing kit, affording the customer ease of installation. The strikes are fully CE marked.

Keith Parry, Alpro's Divisional Sales Manager says "The comprehensive performance specification of the units, coupled with the overall quality and innovation, enable

alpro®
Architectural Hardware

us to offer a versatile product at a competitive price. Illustrating once again Alpro's stated aim of offering quality and service to the industry in general. It's as simple as this, if you want an AC strike it's the Alpro range, if you want a DC strike it's the Alpro range. If you want both fail safe and fail secure, it's the Alpro range. If you want excellent service it's the Alpro range. With this new product offering the customer has a convenient "one stop shop". Backed by a no quibble 6 year warranty, this truly is a market leading product range, from a market leading company".

The Alpro product range comprises a variety of contemporary handle styles, which are both hard wearing and aesthetically pleasing, with bespoke designs available to your own specifications. The Alpro range also includes deadlocks, deadlatches, lock accessories, cylinders, transom door closers, flushbolts, armoured strikes, digital locks, lever and paddle handles. All of which have been designed for the commercial aluminium door industry.

A variety of electro-mechanical products complement this impressive product portfolio, designed to meet the needs of the demanding access control market segment. Products include electric strikes, deadlocking bolts, solenoid bolts, compact shearlocks, cabinet locks, waterproof keypads and exit switches, to name but a few.

Alpro's location in Poole boasts substantial levels of stock, tailored to the fast response times expected of a quality supplier. Comprehensive internal and external, sales and technical support throughout the country is available to ensure the correct selection of product and applications.

Alpro products are available in the UK from IEC Limited and through all major security product distributors.

Please see our two advertisements, opposite the President's Introduction and on the inside back cover; – and visit our website: www.alpro.co.uk

ALPRO launch the new VORTEX magnet range: Our clean green locking machine

To ensure Alpro hardware stays at the forefront of new product design and innovation, the company has launched the Vortex range, a new generation of face to face electromagnets. The magnets are smaller than a standard slimline magnet, but combine higher holding forces of 1500 kgs with lower current draw than standard magnets, making them both more efficient and ecologically friendly.

The magnets unique design embodies a conical aperture with a strong armature pin, which combines both magnetic and mechanical holding force to give better strength capabilities and which, allow the magnet to release under 100 Kgs of side loading. Independent tests have shown this unique feature to provide 1,500kgs (15,000N's) of genuine holding force. The magnet is dual voltage (12/24vDC) and draws 240mA at 12volts DC and 120mA at 24volts DC.

The smaller dimensions of the unit (200mm long x 36mm high x 30mm deep), mean for practical purposes the units will also fit smaller type doors and frames. Combined with a weight of 450kgs the overall design clearly shows how much new and improved technology has been incorporated in to the range whilst taking the needs of the end user into account.

Additional features built into the units include dual monitoring, locking and door position and a large built in

LED to allow visual status. The magnet is also fitted with pressure sensors to provide an early warning system. If the unit is alerted to force, as in the situation of illegal entry, the magnet sends an alarm to pre-warn that access is being breached.

The units are available with a full range of accessories and mounting brackets and the product has been patented to protect the new and innovative features. Backed up by a 10 year warranty this new range of magnets is a major development in face to face magnet design and technology.

Keith Parry, Alpro's Divisional Manager commented "This new range of magnets illustrates Alpro's stated aim of giving the customer what they want. This product is not only more efficient and ecologically friendly, but is also competitively priced and stronger than the current products offered by competitors. The high holding force, which has been independently shown to be superior to anything currently in the market place for face to face magnets, ensures that this range of products will be the first item an end user will want to install".

The Alpro product range also comprises, a full range of pull handles, deadlocks and deadlatches, concealed transom closers, electric strikes, flushbolts digital locks and a full range of accessories designed for use within the commercial aluminium industry. Alpro will once again be show casing its full product range at a series of MLA exhibitions throughout the year.

Based in Poole Alpro boasts substantial stock levels, coupled with speedy response times, and national sales coverage with both an external and internal sales and technical team. Customer service is at the very heart of Alpro's aim of ensuring the customer receives first class service along with competitively priced product.

Alpro products are available in the UK from IEC Limited and through all major security product distributors.

RAINER SECURITY PRODUCTS LTD

Since 1988 Rainer Security Products Ltd have manufactured and distributed the **ARROW** Interchangeable Core / Master Key System within the UK and Europe.

LOCKSMITH SUPPLIES

For the Locksmith we can now provide bespoke Interchangeable Core Master key systems across a variety of key sections from standard layouts where key blanks are readily available, restricted formats where end user authority is required, right through to fully patent protected keyways offering the client even greater security. The recently introduced **Keymark X4**, patented until 2027, offers a particularly high level of protection where the issue of cores and keys is, of course, closely monitored for the security and benefit of both the installer and end user.

DEVELOPMENT

Our continued success depends wholly on innovation and the development of new products not only to enhance our range but also to adapt to current and future changes in ironmongery formats.

The manufacture of the Arrow Interchangeable Core has been upgraded to match the ever increasing popularity of euro-style locks. Our core has been completely redesigned with the lower section of the core now having flat sides. This UK developed idea means that alteration to the door furniture is no longer required when installing our cylinder. We have also further developed our Euro-Profile conversion cylinder housings to give far greater compatibility over a wider range of lock cases and ever thickening door slabs. Our capability allows us to produce unusual size cylinder lengths to special order.

KEY RELEASE DOOR CHAIN

One of our most inspired designs is the Rainer Security Key Release Door chain, or KRD. Our increasing involvement in Sheltered Housing illustrated the need for a product to provide enhanced door security and peace of mind for an elderly resident whilst allowing key override for a warden or carer. The KRD operates as a conventional door chain but allows authorised key holders can gain access whenever necessary.

Our KRD is fitted with an interchangeable core and can therefore be suited into an existing interchangeable core Master Suite or run as a stand-alone arrangement.

REVOLUTION

RAINER SECURITY PRODUCTS LTD
Introduces a Touchscreen Door Lock

Rainer Security Products Ltd is introducing to the UK a touchscreen door lock that combines the function of a cylindrical lockset with a new design appealing to the iPod generation!

The **ARROW REVOLUTION TOUCHSCREEN DOOR LOCK** features a touchscreen, above the door handle, that's similar to those found on the latest mobile phones. Instead of turning a key to gain entry, people touch the screen and enter a passcode to unlock the door.

The **REVOLUTION** brings digital technology to the markets where door locks haven't changed much over the years – in high-traffic areas with multiple users in such settings as hospitals, offices, hotels, apartments, churches, schools universities and stores.

"This dramatic makeover of the traditional lock-and-key set with today's technology provides a much-needed update to a product that's often taken for granted," says Andy Rainer, Managing Director of Rainer Security. "With Revolution, security professionals no longer have to worry about lost keys or bulky push-button locks housed in unattractive boxes."

REVOLUTION is quick to install, is a direct replacement for Unican 1000 and as easy to use as dialing a phone number. It's suitable for use indoors or outdoors and there's even a security override in case of emergencies plus a battery back-up facility to ensure it works every time.

REVOLUTION is programmed via a voice prompt that guides users through the process to set up user and supervisor codes. And yes, the lock can still be operated the old-fashioned way – with a key override utilising interchangeable cores.

Please contact our Sales Department for further information and to arrange a demonstration or visit www.arrowrevolution.co.uk

TOUCHSCREEN TECHNOLOGY

Innovative design at an affordable price.

WEATHER RESISTANT

Indoor/outdoor installation.

VOICE PROMPTED

Trilingual for easy-to-use lock narrative.

ARROW
LOCK & DOOR HARDWARE

ASSA ABLOY

MUL-T-LOCK

Leading security locking company, Mul-T-Lock (UK) understands better than most the importance of innovation in the industry. After 25 successful years of growth in the UK we are proud to have pioneered some of the most significant developments in the industry. When copyright protection for keys expired Mul-T-Lock was already offering patented key protection to safeguard against unauthorised key duplication. As criminal use of cylinder snapping techniques escalated Mul-T-Lock was first to market with its Break Secure anti-snap cylinders.

Now, as customers start to look for more advanced, electronic solutions to their security needs Mul-T-Lock is again on hand to offer high quality, reliable products through its trusted network of expert locksmiths and security professionals.

Combined Security Solutions

Steve Ross, Mul-T-Lock's Managing Director is keen to stress that while high security, high quality mechanical products will remain at the heart of Mul-T-Lock's portfolio, the company now aims to offer tailor made, Combined Solutions. While Mul-T-Lock built its reputation around a range of high security cylinders and padlocks we recognise the security requirements of today's world are more complex and need to cope with frequent changes. This is why we have introduced a number of electro-mechanical and electronic products that complement our traditional portfolio, such as MT5 CLiQ and Smartair.

The Combined Solutions ethos requires all the security needs of each application to be taken into account. It goes beyond just physical protection and takes into account user convenience and safety, system management and the need for flexible working practices as well as integration with existing security systems and future developments. Only once all this information is considered can the correct solution be determined. Very rarely will this consist of a single product solution but will instead be made up from a number of different elements to match the requirements as closely as possible.

Mul-T-Lock is committed to providing innovative solutions that can be used either on their own or as part of a combined product offering that works hard together to offer real benefits to the user.

Wirefree access control

Perhaps our signature system to illustrate this is Smartair, which impressively offers around 80% of the useable features you'd expect from a hard wired access control solution at approximately 20% of the cost. Smartair is ideal for any commercial environment where a degree of people management is required. Each escutcheon is a standalone, wirefree access control unit that can be used

alone or linked to any number of other units, across multiple sites. Smartair is both easy to install and manage, providing the site owners full control over individual door security and the movements of all users across their site.

Electro-mechanical integration

CLiQ is an example of how Mul-T-Lock is embracing electromechanical technologies. Unlike most electronic cylinder products on the market, MT5 CLiQ incorporates the latest patented cylinder technology from Mul-T-Lock along with the proven CLiQ electronic capability into a wide range of door cylinder types as well as cam locks and padlocks. This allows CLiQ products to integrate seamlessly with a mechanical master key suite while providing advanced access control functionality, such as audit trail data, instant key deletion or timed access to more sensitive areas within the premises. Taking only minutes to install, MT5 CLiQ provides a cost effective solution to upgrading existing security or where a full access control system is not feasible.

Keyless convenience

Where convenience is a priority our Code-It handle provides the answer. Code-It is an innovative door handle with integrated electronic security, offering simple and effective keyless locking for internal doors. Battery operated, Code-It is designed to enable convenient, pin code controlled access to a door, without the need for any secondary locking unit and will quickly replace most existing door handles.

Mechanical developments

While much focus has been given to these new ranges it does not mean we have neglected our mechanical platforms. By example, a new range of advanced Break Secure cylinders will soon be available offering an even higher level of protection against cylinder snapping for homeowners. Meanwhile the E-Series Padlock range, available with our patented Interactive and MT5 locking mechanisms, have been independently tested by Sold Secure, achieving Gold and Silver standard to reassure users that they provide industry leading levels of security.

These are just a few examples of the mechanical and electromechanical product solutions Mul-T-Lock has to offer. And our dedicated specification sales team is on hand to work with in partnership with professional locksmiths across the UK to create a bespoke solution for any application.

To find out more about any of the products discussed here or to discuss a particular application with one of our specialist sales consultants please contact us on 01902 364200 or email marketing@mul-t-lock.co.uk

ROTTNER SECURITY UK

The Rottner group is celebrating its 40th anniversary in 2011. Rottner Security UK Ltd is celebrating 5 years existence.

What began 40 years ago in a small garage in St. Georgen near Salzburg (Austria), has developed into a unique success story.

The Rottner group today belongs to Europe's biggest companies dealing with safes, letterboxes, gun cabinets, key cabinets, cashboxes etc..

Rottner is represented by subsidiaries in 9 countries and distribution partners in a further 3 countries. Altogether Rottner delivers to over 30 countries in Europe and the Middle East.

Over 10,000 customers, among them popular DIY and cash & carry stores, more than 4000 products; these are impressive figures.

We are experts in special solutions for banks, car centres, petrol stations, law firms, jewellers and others. We are partners with a lot of these notable branches all over Europe.

We have got warehouses in Austria, Germany, the UK, Slovakia and Romania with more than 9000 pallets.

We are proud of being an Austrian company, our philosophy is however to adapt to the market situations, lifestyles and customs of the particular country. Rottner regards its customers as partners and friends. This also distinguishes us from others.

As a result Rottner has established itself as a fixed component in the British and Irish market - whether concerning safes, gun cabinets, key cabinets / safes, or also concerning letterboxes. Rottner can always offer an individually adapted solution.

We also offer ideas and equipment for your showroom, from a mobile sales shelf for letterboxes to the point of adjustments to your salesroom. The new flexible sales stand for letterboxes is shown in this edition.

Having Rottner as a partner gives our customers the advantage of being able to obtain the whole range of products from one source.

Everyone is sure to find a suitable product from our large range of models. We do not have 20+, but 250+

different letterbox models, and the best thing is that they are all in stock.

Competence in buying and logistics pays off and is of benefit to the customer.

The experience of being a recognised partner of notable companies in all parts of Europe for 40 years, also provides our customers with the confidence of having a competent partner alongside them.

Unfortunately Rottner has recently been the subject of rumours, that some of our safes do not conform to the necessary standards.

I can personally assure you that our certified safes do in fact possess the necessary licences and we have not had to take any of our safe models off the market. The licence numbers are located in our headquarters and can be requested at any time.

Only in very few cases is the success of a company based on one particular moment. A good strategy, vision and the ability to be able to duly recognise the changes in the market, are also pillars of good economic activity, as well as having the costs under control.

A good management information system – the Rottner group definitely has one of the best developed systems, shows the smallest changes immediately, creates predictions and bestows enormous flexibility and allows the back-office to be set up considerably smaller than with many others.

Finally our customers also gain the benefits of this.

Despite all the success of the last years it is time to recognise the signs of the times and prepare the Rottner group for the next 40 years. For this reason there will be some changes in the future, that make us stronger and offer more flexibility to the customers.

We will gladly tell you more about our products, our strategy and our company philosophy at the MLA EXPO from 9th–11th September at stand number 175.

We look forward to welcoming you. Furthermore several surprises will also be waiting for you.

STERLING

Value for money is always important, but for locksmiths 'value' means more than 'cheap.' A good value lock is one that is high quality as well, meaning it won't let you down when it comes to the crunch. Sterling knows this, which is why it is one of the fastest growing security suppliers in the UK.

With a huge range of locking and security products ranging from no-nonsense padlocks to electronic alarms and stylish postboxes, Sterling supplies every need from heavy-weight protection for commercial premises to 'lifestyle' locking solutions for the home. What's more, all Sterling products are made to tough specifications at great value prices. But the main reason retailers are joining Sterling is because the company is committed to great customer service. With a dedicated sales force which knows the business inside out, Sterling is always on hand to make sure that selling locks goes as smoothly as possible.

MLA Approved Company Sector

The Master Locksmiths Association was first conceived in 1957 and was the idea of the Chubb Lock Company and one or two London Locksmiths. The prime mover was Mr. Steve Fallshaw, then a locksmith in The Barbican, who became its first Chairman when it was formally founded early in 1958. The original sixteen members decided the new 'association' should be known as The Greater London Master Locksmiths Association (GLMLA).

By the end of the first decade it had grown nationally with a wide distribution of members from all parts of the United Kingdom. At this time it elected its first national President namely Mr. Steve Stephens of Oxford. The association by now included members from overseas and a healthy growth has been maintained, we now number almost 1500 members in all sectors.

In the early 90's the association restructured to meet modern demands, retaining its title Master Locksmiths Association (MLA) it formed three sectors. They are the 'British Locksmiths Institute' (BLI) for its individual members' skill qualifications, 'Guild of Keycutters' for all producers of keys wishing to comply to standards and 'Approved Company' for trading companies. The fourth 'Affiliates' sector remained unchanged and represents the manufacturers' and suppliers to our industry.

Aims of the Approved Company Sector

Companies and locksmiths trading in their own right, with retail premises or operating as a mobile locksmithing business, join the MLA Approved Company sector. It is this sector of the Association that trades directly with the public and private sectors in the High Street and through Yellow Pages, and other advertising media.

The Approved Companies inspectorate means the MLA can demonstrate that all Company Members are meeting high standards. Each company is inspected on a regular basis, thus ensuring that its members and their operatives maintain standards in workmanship and administration. Also members are expected to conform to legal requirements and that customer charters exist to service customer satisfaction.

Inspections have the effect of making locksmithing companies more accountable for their daily operations. Approved Company members are made aware that the MLA considers that training is also a valuable means to maintaining standards. Training is offered at the purpose built, state of the art training facility at the MLA's Head Office in Daventry.

Continued growth of the Approved Companies ensures that the MLA can offer a national network of locksmiths and the Associations head office in Daventry refers enquirers to their nearest approved company. A National 0800 number enables potential customers to find the nearest member quickly or check those companies displaying the MLA logo are bona fide members.

The Logo depicted here is the one that is advertised by an approved company on their premises, vehicles and stationery, confirming to the public the standards expected of them.

Channels of arbitration exist to fully investigate any complaints or disputes, should they arise, and the MLA advises or takes any necessary action. The Board of Directors continually looks at consumer matters and advises members when appropriate.

The Approved Company sectors operates schemes whereby discounts may be available to policyholders of most well known insurance companies and they provide the service behind many major help-lines.

The Master Locksmiths Association "Approved Company" helpline is available to locate your nearest locksmith: — 0800 783 1498

Mr Locks®

SOUTH WALES LOCKSMITHS

**LOCK OPENING & FITTING • LOCKS CHANGED • KEY CUTTING
MASTER KEY SYSTEMS • DOOR ENTRY SYSTEMS • SAFE ENGINEERS & SUPPLIERS
PVC & ALUMINIUM DOOR LOCK SPECIALIST**

Mr Locks is an established Cardiff based company with over 15 years experience of providing a professional locksmith & safe service throughout South Wales.

We provide a one stop lock opening & replacement service for all types of locks, and we specialise in replacement of broken locking units to commercial Aluminium & PVC doors. We are also experienced safe engineers and practice non-destructive opening where possible on all grades of safes & are members of SAVTA.

In order to provide high levels of service to our customers, we have invested heavily in kitting out our mobile workshops with a huge range of locks, key cutting equipment and an independent power source.

This allows us to complete 95% of jobs on-site without the need for a return visit, resulting in lower costs to our customers and reduced overheads for ourselves.

Our customers also benefit from our Emergency Freephone Number **0800 083 2882** which is manned 24 hours a day should a locksmith be required out of hours.
We always answer the phone!
