Introduction by the NHWN chair

It is a great pleasure to be invited to write an introduction to the 2013 MLA Handbook. I have always been a fan of trade associations, which provide a genuine service to their members and at the same time, offer the public the reassurance that the products and services that they are buying are of a high quality and fit for purpose.

In my working life as a police officer in London, I was frequently asked to recommend lock fitting companies to the victims of burglary, and although I was prevented from naming individual companies, I had no hesitation in saying that whoever it was, they should be a member of the MLA. And now as Chairman of the Neighbourhood and Home Watch Association for England & Wales, I have no hesitation in giving the same response when asked.

There is a natural synergy between our two organisations. We both are concerned about the security of residences and businesses within the community and we both want the best for our members.

Thankfully the number of residential burglaries has diminished considerably since neighbourhood watch started thirty one years ago, campaigning for target hardening and the success of that campaign is in no small part due to improved home security provided by members of the MLA

May I take this opportunity to wish all your members a successful year ahead and may our two organisations continue to work closely together

A handwritten signature in black ink, which appears to read 'James Maddan'.

James Maddan
NHWN Chair

MLA Overview

The Master Locksmiths Association (MLA) is the leading trade association for the locksmithing industry. A truly not-for-profit organisation promoting the skill and integrity of its approximately 1,400 members, it was established over 50 years ago to set and promote standards of conduct, practice and materials within locksmithing. Recognised as the authoritative body for locksmithing by the police, home office, British Standards Institute (BSI), The Risk Insight, Strategy and Control Authority (RISCAuthority; formally IPCRes, the UK property insurers' technical group) and Building Research Establishment (BRE), the MLA also has a subsidiary company, Sold Secure, which performs certification of security products via manual attack testing.

MLA member companies, who undergo strict vetting (including criminal record checks, regular inspections to ensure quality etc), are able to provide advice based on knowledge and experience, recommend products that are fit for purpose as well as provide professional installation and maintenance services. Details on your nearest MLA approved company can be found in the directory section of this handbook or on our website www.locksmiths.co.uk.

As a City & Guilds and HABC approved centre, the MLA also provides training from its purpose built training facility based at the company headquarters in Daventry, consisting of a classroom type environment for theory work and fully equipped workshop for the hands-on practical elements (N.B. due to the content of some courses they may only be open to MLA members). Courses currently include general locksmithing; opening; access control, safe engineering and Auto Locksmithing, with others currently under development. The MLA has been fundamental in the project of developing a nationally recognised qualification for the industry and is working with the sector skills body Skills for Security to progress this into the development of a formal apprenticeship framework.

Suppliers of High Quality Safelocks

- ELECTRONIC
- COMBINATION
- KEYLOCK

Safelock Systems Ltd is a supplier of high quality and high security Safelocks to the trade, stocking a range of Safelocks from leading manufacturers, and providing unparalleled **technical support** to customers. Safelock Systems can **respond quickly** to orders, and prides itself on **aftersales care**. Please call us for more information or visit our new website, opening in early 2013.

www.safelocksystems.com

Tel: 020 8949 1005 Email: sales@safelocksystems.com

About us

Safelock Systems Limited is a distributor of mechanical and electronic Safelocks to the UK trade, and was incorporated in 1985 by Jim and Linda Brown. Since that time, Safelock Systems has distributed LAGARD Safelocks. With the passing of Jim early in 2012, and the retirement of Tom as the General Manager, Jim's son and daughter Tony and Jasmine joined the company. They immediately saw the potential working with the already successful team, and are excited about the future.

Safelock Systems are very pleased to announce that they will be expanding on their range of products in 2013. Whilst continuing to supply LAGARD locks, Safelock Systems will also provide Tecnosicurezza and WITTKOPP products, in addition to Stuv Keylocks and STB Timelocks.

Safelock Systems has built an excellent reputation for aftersales care and technical support, and the team are keen to continue providing high level service for their new ranges, working in close partnership with manufacturers to meet all customer's needs.

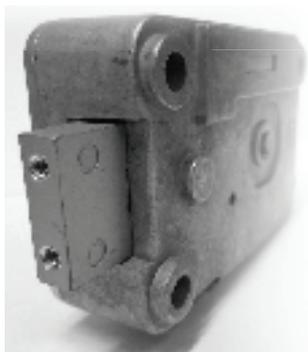

The exciting new range of electronic lock systems include Tecnosicurezza's **TechMaster**, incorporating Multi-User, Timelock, Audit, Multi-Lock and Network functionality, able to meet the needs of any customer. Tecnosicurezza's **MiniTech** is a new system providing excellent Audit and Timelock features at an affordable price, while the **Pulse** and **Pulse Evo** locks, are becoming familiar across the UK.

From WITTKOPP's ethos for mechanical precision and high production values, the new **PRIMOR** series has emerged, soon to be followed by the **GATOR** and **SMARTCAM** ranges, which will include advanced features, suited for high-tech and high security applications. Safelock Systems will also stock WITTKOPP's renowned range of keylocks.

LAGARD safelocks have been a household name in safe security for over 30 years, and their **Basic**, **ComboGard Pro** and **AuditGard** ranges, continue to be a popular and reliable choice.

All electronic locks provided by Safelock Systems are Vds compliant where applicable, and go through final testing and programming according to customer's needs, ensuring a quality product for safe makers and engineers, and a complete solution for end-users.

The team at Safelock Systems are looking forward to the future, and would like to thank their customers throughout the UK for their continued support and business.

Overview from the Director of Business Development

Once again I find myself repeating the same words from last time - what a 12 months it's been!

Development of the qualification and apprenticeship framework progressed, with work going in to getting approved centre status from our chosen awarding body (HABC) and putting the requirements in place to be able to work alongside Skills for Security, who draw down the funding from government, to provide the assessor criteria for this. It's a shame that there's no formal off the job training as part of the apprenticeship itself but there's always the top rate training courses that the MLA provides anyway. Whilst it's due to be officially launched at MLA Expo in September this year, we'll be looking to take on learners from around May time which should fit in with the academic timeframe for school leavers. It'll be great to finally have a formal route to entry for what is finally becoming a recognised profession.

Our PR activity continued at pace, whilst there's an article outlining the PR activities elsewhere in this handbook, I was pleased to see the reach that the activities had, ranging from national newspapers and Radio coverage, through to regional newspapers and TV, along with plenty of coverage in the specialist media (FM, House & Home etc.) we've seen awareness of the association and members promoted far and wide. Promotion to the Police and insurers was maintained at a high level with a number of presentations and workshops having been delivered, and relationships with the Neighbourhood and Home Watch Network and Which? were developed and have led to significant coverage.

Sadly during the year we heard numerous reports of scam operations who are positioning themselves as MLA

members or using the names and addresses of genuine local firms despite not being in the area they claim to be. Work through a PR and marketing campaign as well as work with third parties such as Trading Standards, was carried out to help combat this and prevent the general public from being taken in by rogue traders. Unfortunately with the current economic climate it's something that we feel will need to be carried on into 2013 and increases the importance of people checking the MLA website to ensure the company they are using is indeed an MLA licensed locksmith.

2012 also saw the successful launch of a new membership category for practicing locksmiths which has seen great take up by those who meet the criteria. The Associated Locksmith category, aimed at those who've been full time locksmiths for at least 3 years and may not have been fully aware of what the MLA is about and what's required for entry, has attracted quality locksmiths who have seen it as a stepping stone towards full membership. We also enjoyed record retention rates evidentially the significant benefits of being an MLA member are proving their worth.

We also developed a new approach to the BLI exam, introducing an element of coaching to help established and experienced locksmiths to understand what's involved and brush up on their skills. There's an article on this within this handbook and if you're looking to take a locksmith exam then I'd recommend you read it, as it could be exactly what you're looking for.

The major accomplishment for the year has got to be however the launch of the MLA's new website.

Firstly there's the obvious re-refresh of the design of the site,

moving away from the old style basic site and having a more vibrant and eye catching design and colour scheme. Most importantly the search function has been improved so that rather than only being able to search by county, now searches can be done by postcode, town etc. or even by simply zooming into the map. This provides a far more user friendly system, which along with the increased content has already provided benefits through increased hits, and links from other security conscious groups and organisations.

Also, by having a content management system we are able to manage, update, alter the content of the site ourselves, giving us the ability to quickly add useful information for the general public.

SEO work has started already and is paying dividends, although this is something that forms a major part of plans for 2013. The website is here, but it's an on-going project with plenty more work to do on it.

2013 will be a challenging year no doubt, but a challenge we shall relish and, as always, take head on!

Yours Sincerely

Dr Stefan George
*Director of Business Development,
 MLA Group*

MLA Member benefits

So why join the MLA? What's in it for the locksmith? As well as the training and MLA Expo mentioned elsewhere in this handbook, there are a significant (and ever growing!) number of other benefits to MLA membership. These include:-

Members Journal

All members receive the association's official magazine "KEYWAYS", this is an in-house magazine for members only, with hints, tips, new products, information on the association, meetings, exhibitions, members' letters and membership details.

Regional Meetings

- Members at all levels are encouraged to attend regional meetings where they can meet their colleagues in the association, talk to experts, listen to seminars and visit small exhibitions. The MLA has recently implemented a Continued Professional Development scheme for which points can be gained by attending the training provided at these meetings.

Members Forum

- There is an interactive web based forum for MLA members to share information, ask questions and further enhance their knowledge, whilst also networking with colleagues and sharing work.

Supplier Discounts

- A number of Suppliers, including MLA affiliate members provide significant discounts on their products or special deals to MLA locksmiths, this can be anything up to 25%

Technical Assistance

- The MLA's Technical Manager is on hand to help answer any questions you may have relating to for example lock standards etc. By sitting on the various lock related working groups and British Standards Committees the technical manager has first-hand information as soon as items are discussed and provides regular feedback to members via articles in the association's journal or by presentations at regional meetings.
- A significant amount of useful information (links to useful documents etc) is available via the members section of the website.
- The MLA has also purchased access to the AIS Safe List and are able to provide cash rating info to members who ask about specific safes.

Health & Safety and HR support

- MLA Approved Companies and Affiliate members get free access to specialist support in the vital areas of H&S and Personnel law.

Insurance Related Benefits

- The MLA has negotiated preferential rates with a number of insurance brokers. These include specialist policies for locksmiths and discounted general policies. Members are also eligible for specialist healthcare cover via a deal with one particular company

Financial Related Benefits

- MLA members have the option to benefit from a 30% discount over standard prices for the use of DebtorController.com, a low cost online debt collection service specifically designed to make it both easy and extremely cost-effective for businesses to secure monies owed to them using an online system that automates the process of debt recovery.
- Banking advice is available from one of the UK's leading independent banking advisors as well as independent financial advice from a leading firm of advisors.

- Discounted mortgage and pensions are available to members
- Discounted credit card processing rates are also available via 2 major suppliers. Terminals, including mobile terminals for taking payments away from the office, are available to members at discounted rates. The association also has a scheme with a 3rd supplier specifically for members maybe don't require terminals and only take occasional card payments, or who don't want the high standing charges associated with credit card terminals.
- Discounted business finance is offered via the BIRA Bank. This also includes access to the BIRA clearing system, a system that helps you save time as well as bank charges by paying all your suppliers with one cheque via BIRA's clearing house.
- Asset finance is available via a partnership with a major player and this extends to enabling members to offer finance to customers for specific jobs thereby helping the customer's cash flow whilst enabling the member to be paid in full immediately.

Vehicles

- MLA Fleet brings you a range of services and discounts to help you procure and operate your vehicles in a very innovative and highly cost effective way. Savings can be considerable - ranging from 5% to 38% through our specially negotiated terms with vehicle manufacturers and suppliers, along with free services including; Foreign travel guidance and authority issue, general guidance to drivers regarding Benefit in Kind / taxation, Servicing and MoT reminders – by email, phone or text, Road tax licence renewal reminders - by email, phone or text etc.
- A further development of the partnership with Fleet Department is the MLA's Vehicle Rental Programme.
- Deals are also available for vehicle (and any other fixed asset for that matter) via an arrangement with a major leasing company.
- For those wanting to go direct the MLA has negotiated a range of significant discounts with Vauxhall (on both its commercial range and cars – up to 32%!)
- Discounted AA membership is available to members as well as special rates with Bodyshops online.

Advertising & Promotion

- As well as being advertised on the MLA's find a locksmith page, in this handbook and in the Security Industry Directory, MLA approved company members can also advertise in corporate boxes in various directories. They are also automatically entered onto a number of websites and have the option of being included in various other directories either at discounted rates or in ones which are limited to MLA members only.
- Members can benefit from a 25% discount on website creation and hosting and get a free website stats package via a deal brokered with Site Wizard.
- For those who don't want a whole website then a "webvert" can be offered; a simple one page site so that you at least have a web presence with your own dedicated web domain and associated e-mail addresses.

Telecoms

- The MLA has teamed up with a leading Telecoms provider to offer members discounted telecoms deals for landline, mobile and broadband requirements

Non-Locksmithing training

- Distance learning courses via partners covering topics such as H&S, selling skills, basic retail legislation, customer care etc.
- 20% discount on Tavcom training

Others

- Health & Safety and Personnel support via various partners
- PNC Stolen Vehicle checks (via Retaina Group)
- Discounted British Standards
- Discounted draft Terms & Conditions for you to adopt
- Longer free trial of Task Adviser, an online task management system
- Specialist Intellectual Property Rights advise and discounted rates available thanks to a link up with a major IPR Consultancy

If you're interested in more details of any of these benefits then please contact the association on 01327 262255 or enquiries@locksmiths.co.uk

MLA Training

MLA locksmithing technical courses are taught by experts in the respective fields. All tutors have a significant amount of experience to pass on to students and are all experts in their field.

The establishment of a purpose built training centre at the MLA's head office enabled the organisation of a basic training programme in 1992. This has been subsequently added to and improved to become what is now a very successful training package, culminating in the BLI Exam which is renowned throughout the locksmithing industry as the only formal locksmithing exam based accreditation.

The exam itself is split into 4 parts and includes a written section on locksmithing knowledge and 3 practical parts which cover fitting, opening and cutting a key by hand.

The MLA's technical excellence in training has been recognised by the military with the awarding of preferred supplier status to the Career Transition Partnership as well as being designated an Enhanced Learning Credits scheme provider (No. 1681).

The MLA's training has also been recognised by City & Guilds with the MLA now being an Approved Training Centre (No. 027758) offering a tailored C&G award in basic locksmithing (No. 1841), and it has also recently been awarded approved centre status for the awarding body HABC (Highfield Awarding Body for Compliance) with whom we are running the soon to be launched Locksmith Apprenticeship.

Courses Available include:-

Technical Courses

- General Locksmithing
- Opening
- UPVC
- Safe
- Access Control
- Auto Locksmithing
- CCTV
- Wireless Alarms
- Electrical Safety
- Fire Regs
- Asbestos Awareness

New courses are constantly under development so please contact MLA head office or visit the website for more information

Why do courses in a particular order?

The MLA puts particular emphasis on providing high level of training in the best fashion. For this reason, unlike many other training schools we only offer opening courses to more experienced locksmiths or those who have done the general locksmithing course. The reason is to ensure a general understanding of the principles of how locks work to ensure the maximum is gained from the opening course (and the techniques learned can be implemented to the best effect)

We are also careful in what we teach to whom, requiring CRB checks to be undertaken before we will teach opening techniques.

In fact the MLA is the umbrella organisation for CRB checking within the locksmithing industry, having been added to the exceptions order for the rehabilitation of offenders act back in 2009. (More information on this is available on the MLA's website)

General Locksmithing Course

This 5 day course is aimed at people looking to join the locksmithing industry, or those who have just started out and wish to learn "best practice" from master locksmiths.

Topics covered in the General Locksmithing Course include :-

- Basic Locksmith Tools.
- Basic of Master Keying
- Blank Identification & the basic of key cutting to Pattern
- Brief History of safes & locks
- Door & Frame Construction
- Health & Safety
- Key Machine & workshop safety
- Key Procedures for Restricted & Registered Keys
- Keycutting to a: Cabinet, Mortice & Safe Lock
- Mechanical & stand-alone Digital Locks
- Mortice & Rim Lock Fitting
- Padlocks & Locking Bars.

- Principle of Lever, Disc Tumbler & Pin Tumbler mechanisms & key differs
- Product Knowledge
- Specialist Door Locks, UPVC, Aluminium & Multi-point Stripping & reassembling of Lever Locks & Pin Tumbler Cylinders
- Stripping a Rim Cylinder & Cutting a key by hand.
- Window & Ancillary Door Locks

Attendees on our general locksmith course also get the excellent MLA Mortice Lock Encyclopaedia.

Opening Course

This 2 day residential course aimed at Advanced Student and above and covers:-

- Theory & terminology
- Opening authority procedure
- Lock identification
- Pick making & Picking tools
- Silver Soldering Demonstration
- Opening techniques and skills demonstration for various lock types

Workshop for students to implement skills learnt

[For security reasons, full details of this course are not publicised]

Students are taught to produce their own toe picks, jiggers, various bypass tools and simple 5 & 6 lever padlock picks. Various picks available for purchase are then discussed including the triple pick, 114 cam pick, Faille Safe's Securefast Pick, 2 in 1 picks, overlifters, Bob Curry's drill templates and several of Paul Sauber's bits.

Picking by hand as well as by pick gun is covered as is bumping. Lock recognition also forms a large part of the course

UPVC

This 2 day residential course covers all aspects of this increasingly popular material and therefore growing business opportunity for locksmiths.

Areas covered include:-

- Construction of profile extrusion
- Door mechanisms
- Door hinges

- Glazing doors & windows
- Opening failed/jammed door mechanisms
- Multipoint upgrading
- Inline Patio's
- Tilt & Slide Patio's
- Casement Window friction stays
- Casement Window mechanisms
- Door opening techniques

Practical sessions as well as demonstrations will also be held throughout the 2 days.

Those attending the course will also take away with them a fantastic 90 page full colour MPL ID manual (laminated pages in a presentation folder) containing detailed photos of different lock cases including internal mechanisms.

Safe Course

A 2 day residential course dealing with domestic and light to medium commercial safes, covering:-

Introduction to start at common level of knowledge.

- Overview of safe construction, locking methods and opening techniques, including wording of invoice to cover work completed.
- Drill technology including sharpening, Drill rigs type & use
- Hardplate penetration and lock manipulation methods through drilled hole.
- Relocking devices in detail – pitfalls and rectification.
- Safe repairs following opening by penetration.
- Safe repairs and maintenance as a result of user problems excluding lock-out.
- Alter combination & cut new keys.
- Final assembly adjustments, test & hand safe back to customer.

All subjects covered will be by taught by lecture and demonstration. In the case of safe opening, students will

examine safes in open state followed by practical opening of a randomly selected safe in teams of two by drill and tool manipulation, a case of a lock-out due to relocker activated will be demonstrated.

Access Control Course

It has become increasingly important for locksmiths to be able to offer a diverse range of services. With security having an ever increasing profile now is the time to learn a new skill.

This two-day residential course will be aimed at Advanced Student & above who are new to electricity and those who wish to tincrease their knowledge of this very important subject.

This course covers: -

- Health & Safety in relation to Electrical Access Control
- Installation and Best Practice
- Theory of Electricity
- Product Choice
- Specification

In addition to the above items there is a hands-on workshops dealing with the practical installation of 3 different types of access control system, in order to get you confident in this field.

Auto Locksmithing Course

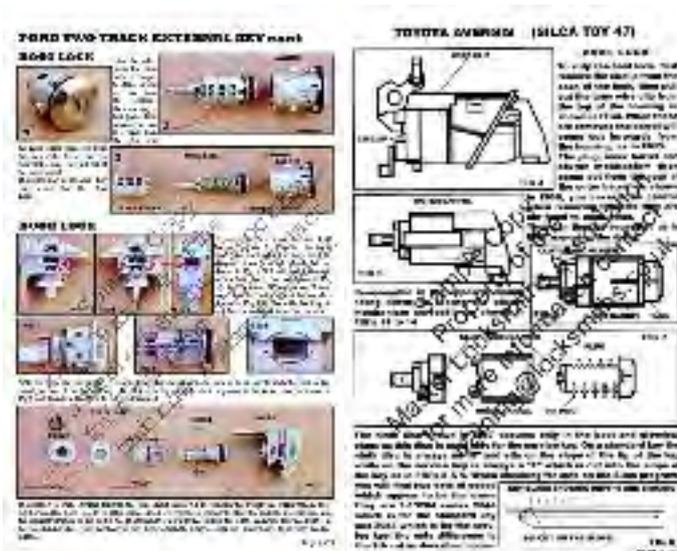

Automotive security is becoming ever more complex, and

as such the art of auto locksmithing itself is becoming more specialised with the need for modern equipment and constantly updated know-how. The MLA offers a 2 day introductory course, aimed at current locksmiths who are interested in getting involved with the auto side of the business.

This introductory course covers: -

- Hands on experience for removal of Ford Tibbe ignition barrel without a working key, Vauxhall ignition barrel removal without a working key and Rover ignition disassembly for re-keying and reassembly
- Examination of the following lock systems, and discussing general tips and tricks for dealing with: Citroen pin systems, Fiat side bar system, Peugeot, and Renault lock systems

A bit of advice on locksmith training

Some training outfits are very bold with their statements that taking their short course will enable them to become fully trained locksmiths earning £50k + per year, but this is surely very much the exception rather than the rule? The MLA believe it's vital that the learner spends a lot of time thinking carefully about wanting to become a locksmith and does as much homework as possible. There are parts of the country that are overcrowded with locksmiths (some of whom are working part time so not necessarily needing to "make a living" from locksmithing alone and thereby doing it at unrealistic rates), whilst there are other locations that aren't as populated with locksmiths. We believe it's vital that anybody wanting to become a locksmith does as much research as possible; looking at where they'll be operating, what sort of services are required there, what the competition is like, where the gaps are in the market, what realistic set up costs are and how this compares to realistic earning potential etc. Locksmithing can be a very fulfilling and rewarding career, but it is that; a career, not a short term money making scheme. We recommend that those wanting to join the industry do it the right way, seeing it as a longer term investment, wanting to learn the right way, from the right people/organisations (we'd recommend anyone interested in learning to be a locksmith gets as many references as possible for training providers for example, where possible talk to the providers and those who've taken courses, even visit to see what the facilities are like. There's a lot of good training out there, but unfortunately a lot of very poor training too so choose wisely!)

- VW 2 track internal laser, Peugeot 4 track external laser, Lexus 4 track internal laser. Ford C-Max 2 track external laser
- Mechanical methods of opening old and new cars; wedges, air bags, through the car tools, lock picking and over lifting
- Diagnostic equipment demonstration by Hickley Valtone and hands on key programming & tips.

Other Training

Other training courses are available to MLA members such as Health & Safety, Marketing, Website effectiveness to name but a few, and we are working with our affiliate members to provide further courses in the near future.

We have also established a relationship with the BIRA to be able to provide their "Steps to Excellence" distance learning courses to MLA members at discounted rates. On top of this we have certain distance learning courses available through our H&S and Personnel Law suppliers, Ellis Whittam.

These include areas such as Merchandising, Customer Care, Communication Skills, Payment handling, Staff Recruitment and induction etc.

The MLA is also able to create tailor made courses, so if there's an area of physical security that you're interested in then let us know

Training is run at a regional level as well as at head office and of course at MLA Expo

The MLA sees training as a never ending activity for locksmiths, irrespective of how experienced they may be, and to promote this the association has its Continued Professional Development (CPD) scheme whereby members record the training undertaken.

For more info contact The MLA head office on:-

Fax: 01327 272539

E-Mail: training@locksmiths.co.uk

MLA EXPO 13

MASTER LOCKSMITHS ASSOCIATION

September 13th · 14th · 15th
The International Centre · Telford

Well whilst MLA Expo 11 only seems like yesterday, we're onto the next one; bigger and better, MLA Expo 2013. Being held once again at the Telford International Centre (we looked elsewhere but to be honest due to the size of the event we couldn't find anything that had the size exhibition hall, the easy access, the onsite hotels, plenty of free parking etc. to match) from the 13th to the 15th of September.

Based on the fact that within 12 hours of launch over 250 square metres of exhibition space had been snapped up, we're confident that it's going to be yet another great event, and so it is proving with well over 40 companies already on board with 8 months to go!

This year will see the usual mixture of great stands, excellent show deals, latest products and top rate training. But added to this there'll be a "bring & buy sale" that'll see the opportunity for locksmiths to sell any items as well as pick up a bargain or two. There'll also be a couple of social events in the evenings, with a President's reception planned for the Friday night and a general social gathering on the Saturday night with some food, music and plenty of networking!

Another difference this year is the fact that visitors could win some fantastic prizes, simply for turning up! Top prize is a trip to Las Vegas for 2, so it's definitely going to be worth your while attending. With more prizes planned, and work progressing on the renowned training that's provided, we look forward to attracting another record attendance. And not only from the UK; at previous events we've seen a lot of locksmiths come over from Ireland for the event, and people have travelled from as far afield as the USA, China and even Australia to attend, so it's very much an internationally attended event.

For more information, to find out who's exhibiting, or to register to visit FOC then simply visit the dedicated Expo website

Hall 2, The International Centre, Telford

Intermediate Apprenticeship in Locksmithing

The Intermediate Apprenticeship in Locksmithing is here....

The new framework has been developed for the locks industry; there is now the very first Level 2 Locksmith Apprenticeship. The apprenticeship will be delivered through the Master Locksmith Association; with the awarding organisation HABC. This Level 2 apprenticeship has been designed with support from employers and trade bodies.

This Apprenticeship programme is designed to deliver the required practical skills and knowledge for apprentices with the skills required to work in the Locksmiths sector; it's an ideal way to lead into, or enhance a career.

The learner must achieve 41 credits to complete the Level 2 Certificate in Locksmithing; this will be combined with on and off the job training over a minimum of a 12 month period. Learners will be required to complete a combined competency and technical qualification, functional skills and an ERR workbook.

On the job = Learning which encourages and enables the apprentice to demonstrate practical job-related skills and to practice and apply these skills in the context of the job. This type of learning will be delivered in the workplace and through practical experience of doing the job.

Off the job = Learning which encourages and enables the apprentice to develop the technical skills of the job and to develop their knowledge of theoretical concepts across a range of contexts and the wider market. This type of guided learning will be delivered away from the immediate pressures of the job. It may be delivered in the workplace, in a college or training provider premises.

Combined units (on and off the job)

Mandatory units

- Reducing the risks to health and safety at work
- Communicate effectively with others
- Conduct dynamic risk assessments during the locksmith activities
- Key System Design and Lock Assembly
- Cut and Provide Keys

Optional group A

- Prepare and maintain equipment and machines or
- Meet Customers' Needs for Locksmith Information and Advice, and
- Maintain security of customers keys and records during locksmith activities

Optional group B (any 2 of the following)

- Provide a complex quotation for security devices and door hardware
- Provide a simple quotation for security devices and door hardware
- Survey sites to collect information for the specification, installation and maintenance of security devices and door hardware
- Diagnose and Rectify Faults on Security Devices and Door Hardware
- Open security devices to gain access to property and equipment
- Install Security Devices and Door Hardware

Functional skills (off the job)

Learners completing the apprenticeship will need to complete functional skills in English and Maths. The learner may be able to gain exemptions from this element if they hold functional skills at the required level or equivalent qualifications within the specific timeframes.

Employee Right and Responsibilities ERR (on and off the job)

Employee Rights and Responsibilities must be covered and assessed as part of the Intermediate Level Apprenticeship in Locksmithing. Submission of the completed sign off sheet in the workbook as evidence of achievement must be provided before Skills for Security will issue a completion certificate.

Completion of this Intermediate programme supports learners to gain progression in the Locksmiths sector and

further their knowledge and skills. Industry training is available for those looking to further their knowledge to specialise within the sector.

Individuals completing the apprenticeship will be fully supported by the MLA to achieve their qualification. If you would like to take on an apprentice or you already have someone within your business that would benefit from completing the apprenticeship please contact the MLA or Skills for Security; we will be able to give you more details regarding the qualification and check whether you will qualify for funding.

- Member of the International Association of Investigative Locksmiths (I.A.I.L)
- Certified member of International Association of Auto Theft Investigators (I.A.A.T.I)

Fire Door Inspection Scheme

The FDIS is delivering fire door expertise, safer buildings and new business opportunities says the scheme's General Manager Neil Ashdown

Early in 2012 the BWF-CERTIFIRE Fire Door and Doorset Scheme and the Guild of Architectural Ironmongers (GAI) introduced a new qualification for fire door and building safety professionals – the Fire Door Inspection Scheme (FDIS) Diploma. The Scheme was the first of its type in Europe and its aim is to give people a greater knowledge of fire doors and a recognised qualification to prove it. More importantly, the more recent introduction of the FDIS Certificated Inspector delivers new business opportunities for companies and individuals involved in the specification, installation and maintenance of fire doors.

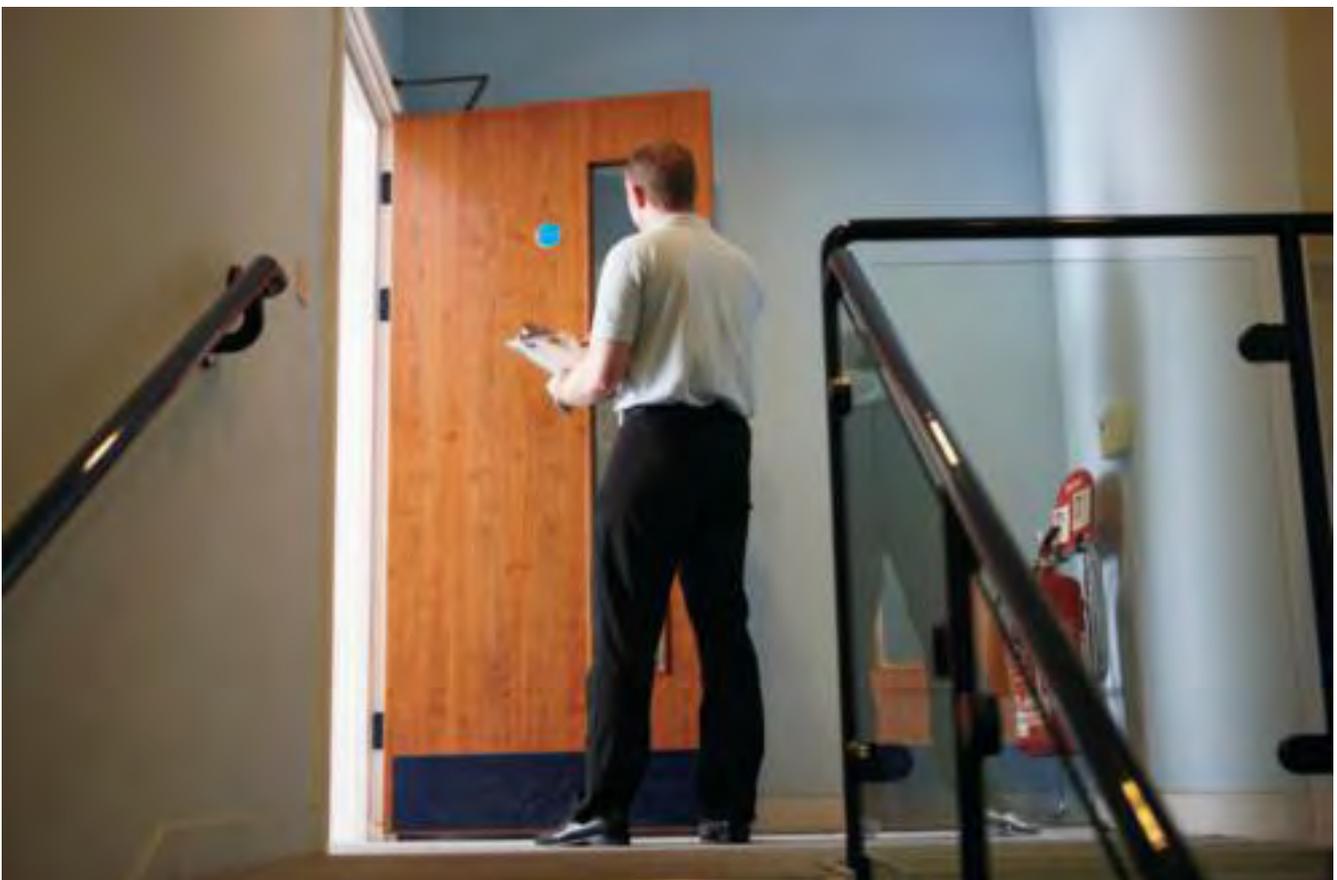

Whilst there is a great deal of expertise in the UK concerning fire doors and their critical role in saving lives and protecting property, up to now there has been no formal recognition of this professionalism. This has made it difficult for those with obligations under the RRO to choose the most appropriate people to help them. And, worry-

ingly, has left a gap in which less than competent professionals may be maintaining and installing fire doors incorrectly and unchecked.

We knew before the FDIS was launched that there would be strong demand for these qualifications. However, even we have been surprised by the interest it has generated from in-house professionals, especially in universities, schools and health estates, to service providers and, also a growing number of MLA members. Individuals and employers are always looking for ways to add value to the services they provide and, in these particularly challenging times, are discovering that the FDIS provides an ideal, cost-effective way to meet this demand.

How does the scheme work? The FDIS Diploma

The first stage of the scheme is to undertake the learning required to pass the Diploma. Registration is via the website at www.fdis.co.uk and once the appropriate payment has been made, which starts from just £300 +VAT (for

GAI/BWF Certifire members), you are given access to the FDIS online learning platform. This contains seven web-based education modules which are designed to be studied at a candidate's own pace and location. A final examination is then taken at a local test centre, and successful candidates are awarded the Diploma in Fire Doors and are entitled to use the designation DipFD after their name. They are also permitted to use the FDIS supporter logo and benefit from FDIS marketing activities.

The FDIS Diploma has been researched and authored by industry experts. It comprises:

- Foundation module - providing a basic understanding of fire doors and their components, including testing and certification, regulations and standards, inspection and maintenance
- Timber fire doors and frames - a more detailed look at timber fire and escape doorsets, their construction, installation and functional performance.
- Metal fire doors - information on how steel doors differ from timber doors, how they are tested, glazed, installed and maintained.
- Glazing - detailed guidance on the different types of fire resistant glass, glazed apertures, glazing retention systems and beading and the importance of getting it right.
- Seals - detailed information on the function and technology of intumescent, acoustic and smoke seals, how they're identified and installed.
- Ironmongery and signage (Part 1) - covers why each type of ironmongery is essential, critical issues about installation, how to check it is functioning correctly and when the item should be replaced.
- Ironmongery and signage (Part 2) - covers essential and non-essential ironmongery, the requirements for panic escape mechanisms and signage on fire doors.

Each module looks at the relevant regulations and standards that apply to fire door components and how certification is crucial to compliance.

The FDIS Certificated Inspector

The assessment to become a Certificated Fire Door Inspector is then available to anyone who has passed the FDIS Diploma Examination and completed the online Transition Module. This comprehensive module covers a range of topics to provide candidates with the knowledge and expertise they need to undertake their assessment and ultimately provide a professional service to their clients.

It includes:

- Contracting with clients to establish appropriate obligations on both sides
- Meeting legal and clients' requirements to gain access to sites
- Working with clients to agree what is required to

- undertake professional inspections
- Inspection and data recording processes
- The obligation to be bound by the FDIS Code of Conduct which sets out the principles of good practice

They are then required to submit their practical inspection skills to the scrutiny of independent assessors at Exova Warringtonfire. The assessment covers checks to ensure that knowledge gained from undergoing the Diploma is being applied, that the candidate demonstrates an understanding of the importance of carrying out accurate inspections as well as providing clients with high quality feedback and professional reports.

Once they have proved they have the competence to meet the required FDIS standard and committed to working to the FDIS Code of Conduct, Certificated Inspectors are provided with support tools including:

- Access to the FDIS database that records and reports on all aspects of fire door inspections
- Template inspection reports
- The unique FDIS labelling system
- Template contracts
- Sales tips
- Sales leads
- Discounted insurance deals.

Certificated Fire Door Inspectors can have their details added to a web-based searchable database to help anyone with legal responsibilities for fire safety to find a qualified person to ensure the safe functioning of all their fire doors. The secure database will also hold information about all FDIS Certificated Inspector led fire door inspections in the UK and is set to become the most comprehensive and accurate source of information available to building owners, fire professionals, risk assessors and others.

For more information about how you can enhance your fire door knowledge to increase your expertise and business opportunities visit www.fdis.co.uk

MLA Develops a Modular Coaching/BLI Exam

MLA develops a Modular Coaching/BLI Exam which proves to be a great success

The Training committee and the MLA Board members have been concerned for some time that there are a lot of very accomplished trading locksmiths who attend regional meetings, Expo, Wholesalers open days etc. yet are not Members of the MLA or BLI. Research has taught us that although many of them would like to join, that there seems to be a fear of the unknown and perhaps a little trepidation in the lack of confidence that they might fail the exam.

Beside these, there are many company employees and existing BLI student/advanced student members who for similar unfounded reasons are also frightened of taking the exam.

Also, there has been a concern that some of those who have taken the BLI exam in the past and failed parts of it were more than capable of success, but were overcome on the day by nerves. Perhaps not surprising considering that for many of them this may have been their first visit to the MLA's HQ.

With all this in mind it was decided that in line with other institutions, we would not only allow the exam to be taken in a modular fashion, thereby allowing people to take the elements they wanted, in the order they wanted and at the speed they felt comfortable with, but also introduced an alternative to the standard BLI exam, which over 2 days included refresher coaching prior to each module, in order to help settle the candidates down and to point out exactly what the invigilator was looking for in a successful pass.

The first of these modular coaching/BLI exams took place in December 2012 over two days with a total of seven candidates in attendance. They were a mixed bunch consisting of existing students, company employees and long trading self-employed locksmiths who wish to become Approved company members.

Prior to each module the candidates are settled down with a cup of tea for an informal chat and refresher instructions/demonstrations and a lecture appertaining to the module in question with some hands on practice if applicable. A full demonstration of the key making is given and good and bad examples of the lock opening and lock fitting are shown.

After which each individual module is carried out under strict exam conditions.

Two modules are completed each day, and lunch is provided. Candidates can (and indeed in this instance did) choose to only take certain elements rather than all 4 if they so wish.

We were delighted to note that all the December attendees passed with very high marks. All 7 passed the written paper with high marks, the lowest being 74% and one achieved 97%. Of those doing the opening (6) all completed the task in under 25 minutes with one of them picking open a Chubb 3G 114 in less than 14 minutes.

Of the 3 fitting a Euro Mortice dead lock, all made a very neat professional job with only one of them loosing points for a slightly oversized cut out for the Euro cylinder but a good shape none the less.

The 4 making keys to a Chubb 110 lock by hand were

good with very acceptable pass marks, even though not quite perfect, except for one who's finished key was an excellent piece of engineering IMHO, for which he achieved a 100% pass mark.

To sum up, all the students felt that settling them down at the start and alleviating their nerves and knowing what we were looking for as a finished result were major factors in their success.

Below is a quote received from one of the candidates in an email after the event.

“Just wanted to say thanks again for all you did to make the two days such a success. I'm delighted to have 'made the grade' and feel the time and money I've invested over the year with the MLA has been really worthwhile; the training and support has been fantastic. I'll start working towards getting approved company status as soon as possible. my only regret is that nerves got the better of me and I had to resort to the drill for the opening!”

So there you have it in a nut shell. If you have any doubts as to your ability to pass the exam, or concerns over what exactly is involved, then this might be the way forward for you. You can of course still sit the exam the old way if you wish but for just a few extra pounds this might be the way for you to go.

For details on how to take the exam in this fashion simply contact head office on 01327 262255 or e-mail training@locksmiths.co.uk

Neighbourhood & Home Watch

NEIGHBOURHOOD WATCH

ABOUT NEIGHBOURHOOD & HOME WATCH

Neighbourhood and Home Watch is one of the UK's largest voluntary movements, with approximately 170,000 schemes and covering 3.8 million households.

The Neighbourhood & Home Watch Network, England & Wales (NHWN) is the charity and umbrella body which represents all Neighbourhood Watch and Home Watch members across England and Wales. It is the organisation that engages with the Home Office and other partners at the strategic level.

What is Neighbourhood & Home Watch about?

The overall aim of the movement is to bring neighbours together to create strong, friendly, active communities where crime and anti-social behaviour are less likely to happen. We believe everyone has the right to feel safe where they live. We believe that community cohesion is the catalyst which can reduce crime and anti-social behaviour.

Our vision is that of a caring society that is focused on trust and respect in which people are safe from crime and live in communities that enjoy a good quality of life.

The first Neighbourhood Watch scheme was started in Mollington, Cheshire in 1982. Since then, Neighbourhood and Home Watch has evolved into wider regional associations and, finally, a coordinated national network.

At the time that the first scheme was being launched, the primary concerns of communities was the high level of domestic burglary, and early neighbourhood watches concentrated on target hardening, property marking and other security measures. Today, the early work has borne fruit and domestic burglary is at an all time low and the emphasis has changed to tackling other quality of life issues, anti-social behaviour etc., developing partnerships with local government, organisations such as the M.L.A., and the police.

How can you get involved?

You can find your nearest local scheme via our online postcode search. If there is no scheme near where you live, how about starting your own? We have a range of materials and toolkits to help you, including ones on starting a scheme and running a scheme. You can browse our toolkits and we also have a lot of resources in our document library, including advice, guidance, customisable publicity material, templates and much more. To get some inspiration you can look at our case studies to see what other Watch schemes have done?

You can click on our contacts page to get in touch with your local police contacts for support from them.

What does the Neighbourhood & Home Watch Network do?

We support Neighbourhood and Home Watch schemes across England and Wales by providing a central resource for members as well as by liaising with other national organisations and strategic bodies on behalf of our members.

We support members to communicate with each other and with partners, local authorities and the police. We provide free tools and resources for our members and help identify opportunities such as local, regional and national-level funding, training, peer mentoring, media outlets and community projects. We also promote safety awareness and community cohesion in partnership with a wide range of other national organisations.

We are committed to increasing the coverage of Neighbourhood and Home Watch and attracting a new and diverse membership.

We recommend coordinators of new and existing Neighbourhood and Home Watch schemes to register on our national database. You can read more about the benefits of registering your scheme on our website (www.ourwatch.org.uk). You can also register a watch in the same way. You can also see more about the tools available to registered coordinators and how to use them by visiting our YouTube channel.

www.ourwatch.org.uk

Lock related standards overview

At any given time there are approximately 30,000 standards within the UK and many more European standards being used covering a wide range of products and services. Standards are under constant review to make sure they are relevant and do not contradict each other. Standards provide the test criteria for independent test houses (such as Sold Secure) to accredit products and confirm they have been manufactured to a minimum requirement. The following overview is a breakdown of locksmith related standards (not exclusively) that people working within the industry should at least be aware of and ideally know what standards apply and when.

Standard Number

BS 3621 2007 + A2:2012

Title: *Thief Resistant Lock Assembly. Key Egress*

The original lock standard first drafted in the 1960's and still the base for all of the lock standards that are cross referenced in it. 3621 was intended for 5 lever mortice locks fitted to wooden doors and is intended to be used on domestic properties. The key-key application of this locking device makes it unsuitable for properties with single exits. The latest version was amended in 2012 to satisfy legal issues within the wording of the document. The UK was able to retain the following BS standards because of the GVA that was not included in BS EN 12209 and BS EN 1303 however BS 3621 was brought into line with 12209 and 1303 in 2004.

BS 8621 2007 + A2:2012

Title: *Thief Resistant Lock Assembly. Keyless Egress*

Introduced in 2004, 8621 has the same test criteria as 3621 but is intended for use on locking devices that require no key to achieve egress. Single exit and multiple occupancy dwellings require keyless egress as per fire regulations. The 2012 amendments were as per 3621.

BS 10621 2007 + A2:2012

Title: *Thief Resistant Lock Assembly. Dual Mode*

Introduced in 2007, 10621 also has the same test criteria as 3621 and is a hybrid of the two previous standards. 10621 locks should not be used in single exit dwellings because of the entrapment possibilities. Amendments made in 3621 and 8621 in 2012 are mirrored here.

PAS 24 2:012

Title: *Enhanced Security Performance Requirements for Doorsets and Windows in the UK.*

Adapted with input from Secure by Design, PAS 24 is intended to provide the minimum requirements for whole door sets in new build dwellings. PAS 24 takes into consideration all aspects of a door including fixings and hinges etc. The lock requirements cross reference to 3621, 8621 etc. PAS 24 was rewritten to include BS 7950 in 2012.

BS EN 12209 2003

Title: *Building Hardware- Locks and Latches-Mechanically Operated Locks, Latches and Locking Plates-Requirements and Test Methods*

This European standard covers requirements and test methods for all types of mechanical lock or latch (including associated or separately supplied locking plates), intended for use on pedestrian doors in buildings but excludes electro-mechanically operated locks and striking plates, multi-point locks and their locking plates, locks for windows, padlocks, locks for safes, furniture locks and prison locks. This standard is in harmony with the *621 series of standards apart from the GVA that is unique to the UK.

BS EN 1303 2005

Title: *Cylinders for Locks-Requirements and Test Methods*

This European standard introduced in 2005 is for cylinders only. The test methods are in line with the *621 series of standards except for the GVA.

PAS 3621:2011

Title: *Multipoint locking assemblies - Keyed egress*

A family of standards that mirrors BS 3621 but for multipoint locks.

PAS 8621:2011

Title: *Multipoint locking assemblies - Keyless egress*

PAS 10621: 2011

Title: *Multipoint locking assemblies - Dual mode egress*

BS EN 1125:2008

Title: *Building Hardware. Panic Exit Devices Operated by a Horizontal Bar, for use on Escape Routes. Requirements and Test Methods*

Experience relating to escape from buildings and general

safety have made it desirable that doors at exits in public buildings, places of entertainment, shops etc., should be fitted with panic devices operated by a horizontal bar. The emphasis for products covered by this standard is on safe exit rather than security.

BS EN 179: 2008

Title: *Building Hardware. Emergency Exit Devices Operated by a Lever Handle or Push Pad, for use on Escape Routes. Requirements and Test Methods*

This standard covers devices to be used in emergency situations where people are familiar with the emergency exit and its hardware and therefore a panic situation is most unlikely to develop. Lever handle operated escape mortice locks or push pads may therefore be used.

BS EN 12320: 2012

Title: *Building Hardware, Padlocks and Padlock Fittings.*

This European standard specifies performance requirements and describes test methods for strength, security, functions and corrosion of padlocks and padlock fittings used in building applications, but excluding cables and chains.

Requirements which relate to security are classified in six grades, based on performance tests that simulate attack. This standard now contains an attack test with a limited tool list based on 3,5 and 10 minutes.

BS EN 14450:2005

Title: *Secure storage units. Requirements, classification and methods of test for resistance to burglary. Secure safe cabinets*

This European standard specifies performance requirements and describes test methods for strength and security functions of secure safe cabinets to S1 and S2.

BS EN 14846:2008

Title: *Building Hardware – Locks and Latches – Electromechanically Operated Locks and Striking Plates*

BS EN 1627 – 1630: 2011

Title: *Pedestrian door sets, windows, curtain walling, grilles and shutters. Burglar resistance.*

Sold Secure

Sold Secure is an independent test house that has its own test specifications based on the standards listed (sometimes using several standards in one specification). Sold Secure has 40+ specifications that are constantly reviewed by industry stakeholders and is recognised by Police groups (ACPO), Insurers and other test houses. Some of the locksmith related specifications include:

SS 301 – *Specification for Mechanical Security Systems for Domestic Buildings*

SS 304 – *Specification for Domestic Safes*

SS 306 – *Specification for Mechanical, Domestic Door and Window Security Systems*

SS 308 – *Specification for Mechanical, Commercial Doors and Window Security Systems*

SS 312 – *Specification for Cylinders for Locks*

Including the new Diamond level that tests cylinders against snapping. Secure by Design recommend SS 312 Diamond cylinders. SS 312 is a stand-alone cylinder test that improves security just by changing the cylinder.

SS 314 – *Specification for Security Cabinets*

DHF Technical specifications

TS 003: 2012

Title: *Door chains and limiters*

Published in 2012 this specification gives a simple pass/ fail test for loads on door chains and restrictors. It replaces a very complicated test specification that was very costly to achieve and therefore manufacturers chose not to use it. The rewrite happened in late 2012 and product should begin to be tested to it in the near future.

TS 007: 2011

Title: *Enhanced security performance requirements for replacement cylinders and or associated security furniture*

A DHF technical specification that tests for security of cylinders or a combination of security handles and cylinders together. A star rated system that needs three stars for the minimum requirement can be achieved with either a three star rated cylinder or a one star rated cylinder and two star rated handle.

TS 008: 2012

Title: *Enhanced security and general requirements for letter plate assemblies and slide through boxes*

A totally new test specification that does not replace an existing specification. This specification provides a means of evaluation against opportunistic attack and employs human intervention testing.

TS 009: 2012

Title: *Enhanced security and general requirements for letter box assemblies that are free standing or surface mounted and where mail is retrieved from the same side as delivery*

This is also a new test specification that provides a means of evaluation against opportunistic attack to try and prevent the contents/ letter box being removed and assess the product against potential arson attack.

TS 621 2011

Title: *Thief Resistant Electromechanically Operated Lock Assemblies*

A technical specification that describes performance requirements for single or multipoint thief resistant electromechanical lock assemblies including the lock interface, striking plate, fixing screws, fitting instructions and where appropriate, cylinders and protective furniture.

Other standards used for reference

BS 5357 *Code of practice for installation of security glazing*

BS 5544 *Specification for anti-bandit glazing (glazing resistant to manual attack)*

BS 6206 *Specification for impact performance requirements for flat safety glass and safety plastics for use in buildings*

BS 6262 *Part 4 Glazing in buildings – Safety related to human impact.*

BS 7950 *Specification for enhanced security performance of casement and tilt/turn windows for domestic applications (now included in PAS 24 for the UK)*

BS 8213-4 *Windows, doors and rooflights Part 4. Code of practice for the installation of replacement windows and doorsets in dwellings*

BS 8220-1 *Guide for security of buildings against crime – Part 1. Dwellings*

BS EN 1906 *Building hardware – Lever handles and knob furniture – Requirements and test methods*

BS EN 1935 *Building hardware- Single-axis hinges – Requirements and test methods*

BS EN 13724 *Postal services – Apertures of private letter plates – Requirements and test methods*

Locksmith related standards in development (titles and numbers to be confirmed)

pr EN 15865 – *Building Hardware – Requirements and Test Methods – Multipoint Locks, Latches and Locking Plates*

MLA 2012 PR Review

2012 has certainly been an eventful year for all of us within the security industry – with the crowds at the Olympics and changes in legislation surrounding squatting being just a couple of the high profile issues that drew attention to the importance of effective security this year.

Last year saw the MLA continue a sustained PR campaign which promotes the importance of security and the benefits of hiring MLA members to both consumer and business audiences – in fact our PR team has successfully generated coverage on behalf of association members' worth in excess of £120,000 which reached an estimated 5.5 million people.

Activity has centred around key topical issues such as Olympic security, including the misplacement of Olympic keys at Wembley Stadium, comment on the change in regulations to do with squatters and the introduction of a new diamond level of security. In addition activity has centred on reaching homeowners directly through regional security advice columns, activity with lifestyle and home magazines and press releases. While the business audience has been targeted through press releases and targeted features.

The team have successfully secured and drafted articles across a range of sectors including health (Caring Times, Learning Disability Practice), property (GSPC, Property Investor Today, Landlord Zone), consumer (J Life, Your Home, Real Home, The Sunday Mirror) and trade publications (Public Sector Build Journal, Building Engineer, The Jeweller, Retail Digital.)

Furthermore our security regular column has been highly successful in press all over the country and regularly features in publications including for example the Yorkshire Post, The Wells Journal, Derby Telegraph, Coventry Telegraph, The Newcastle Journal, Nottingham Evening Post & The Lincolnshire Echo to name just a few. This column promotes the importance of security and points consumers directly to their local MLA member through the association's website.

Sadly we are still hearing reports of scam operations who are positioning themselves as MLA members or using the names and addresses of genuine local firms despite not being in the area they claim to be – our new website, PR and marketing activity as well as work with third parties such as Trading Standards, aims to combat this and prevent the general public from being taken in by rogue traders.

Furthermore we have significantly invested in our website

to create a more user friendly site to enable customers to find a reputable locksmith in their local area. In addition to providing a more customer-focused front our new site provides simple yet effective advice on domestic and commercial security, making it a one stop shop for security advice. A specific PR campaign surrounding this new website was created and is on-going.

We have some exciting PR plans for 2013 too, with focus remaining on promoting MLA members to consumers and business owners. The team have started 2013 on a high with some national coverage already in the pipeline and some new projects in motion – rest assured all will be revealed in due course!

A couple of things we can “let out of the bag” though, starting with the work towards launching a nationally recognised qualification and apprenticeship scheme which has been on-going having had major input into the content of the qualification, with Skills for Security and the MLA's chosen awarding body HABC. We are due to officially launch both the apprenticeship and qualification in September 2013 (although we're expecting to be able to sign up candidates before this date).

Our digital offering is shaping up too with further work on Search Engine Optimisation to the website and even more information and articles offering security advice on a wide range of issues to consumers, as well as more promotion of the site itself to members customers, this could for example be through the development of an e-newsletter campaign which could offer members, partners, customers and the media alike regular updates on security matters, MLA news and topical industry updates.

One thing that will be taking centre stage for our promotional activities will of course be the 17th incarnation of MLA Expo in 2013 which is shaping up to be one of the biggest locksmith exhibitions yet – with 20 per cent of space sold within just 24 hours of launch. The 2013 event will see the not only great deals for those looking to purchase locksmith related products, but will also see the usual highly acclaimed Expo training and this year a fantastic prize draw for visitors – the top prize being a trip to Las Vegas. Also, back by popular demand for the 2013 event we will have various evening social events to enable locksmiths, suppliers and trainers to get to know each other and network in an informal and relaxed atmosphere. PR activities have already kicked off for this event and there's plenty more to come.

MLA 2012 PR Review

We hope to see those of you in the trade at the International Centre at The Telford International Centre on 13-15 September 2013.

So if you want to benefit from all this PR why not join us? Contact membership@locksmiths.co.uk or call us on 01327 262255 for more information.

A Willenhall, Wolverhampton based family company. Specialists in design & manufacture, refurbishment, repair & reproduction we have an extensive portfolio. We can do pretty much anything to do with locks & keys due to our experience (except transponder keys) We also supply our own range of cast keys & a large selection of plant & forklift machinery keys.

Bespoke locks and keys handmade are our speciality. All manner of door furniture expertly hand-crafted, keys created for locks & locks manufactured to required specifications. Please view our website www.carrierlocks.co.uk Unit 9 Ward street Willenhall WV13 1EP Tel /fax 01902 685818, 07792 797148, (Neil) 07980 573752 (Keith) Email carrierlocks@aol.com

The MLA's New Online Presence

2012 saw the launch of the MLA's new website. This exciting development was the culmination of phase 1 of a "digital revolution" within the association. No, nobody's being overthrown, more a case of the association joining the digital age and making the most of technology to work smarter, and promote members better.

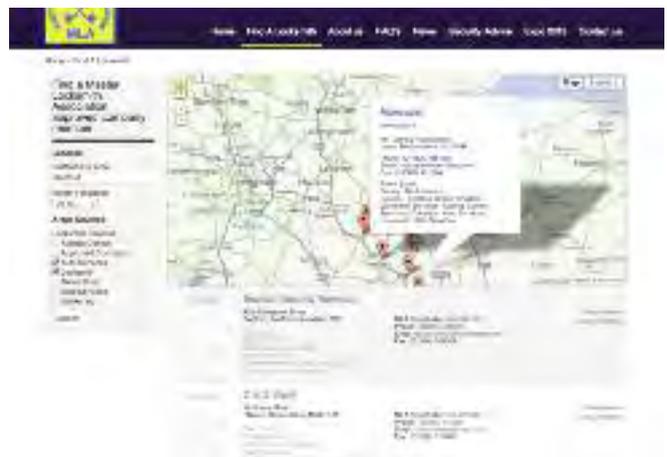

work that members can do. "Below the fold" then provides further info including a link to our corporate video (especially useful for SEO as search engines tend to like video content), and information for those in the trade or those thinking of entering the trade. And then there are also direct links to specific parts of the UK where lists of local MLA Approved Companies can be found for that area.

The search function for finding a member locksmith is something that's taken a lot of work, moving from the old county based search to being able to search by postcode, town, city, county, name etc. or even just by simply zooming into a particular area of the map.

There is also the option of a more detailed search where you can specify a type of service that is required. Once an area has been stipulated then members in the vicinity (depending on the distance of search chosen) will come up showing pins on the map where they're based and underneath the map showing in order of distance from the point chosen. By clicking on the pin then details of the company will appear on the map.

Whilst using the old, and much coveted www.locksmiths.co.uk URL, firstly there's the obvious complete new re-design of the site, giving it a totally new look and feel to the old (and somewhat outdated it has to be said) site.

The "above the fold" part concentrates on promoting our members to end users with the find a locksmith map section, info on why people should use MLA members and then information on the various aspects of locksmithing

If you click on the company name in the list (or on the “bubble” from the pin) then you go to the members own page on our site which provides full details on the company, services offered, areas covered, opening times etc

The site has purposely been built with 2 distinct users in mind, firstly the “locksmith customer”, i.e. a member of the public or commercial customer who’s looking for a locksmith and/or looking for security information and advice, and secondly the “trade”, those that we’re looking at from an existing member or potential new member perspective.

The public facing side concentrates on highlighting the lack of Government regulation in the industry, provides useful security advice, as well as answering FAQs, whilst the Trade side looks at what it’s actually like in the industry, provides some useful advice on locksmith training (no it’s not that pot of gold that some training companies will have you believe!) and provides information on the benefits of MLA membership etc.

Advice for users is available in different formats, from the well-known MLA Minimum Security Guidelines (freely available as a PDF download), through answers to typical security and locksmith related questions (e.g. can I fit my own lock, I’ve heard of lock snapping what do I need to know etc) through to a visual guide to good and bad security.

Then, as well as the usual news and contact us sections, the Expo part (see more details of MLA Expo, the UKs main locksmith exhibition elsewhere in this handbook) and useful links section we also, thanks to the content management system enabling us to add our own content, thereby allowing us to respond quickly to things that are going on, or media coverage of a certain security topic, are able to add information on various topics, such as the excellent work we’re doing with Neighbourhood and Home Watch Network.

There are plenty of plans for future development of the site, and we’re starting with a significant amount of SEO work to help raise the profile of the site and members, but if you have any suggestions for content, or how we can improve it further then please let us know. There’s a contact form on the site that you can use that gets sent straight to us. But in the meantime we hope you enjoy the new site!

Chubb Award & Nigel Rose Bowl 2012

MLA Awards

The MLA's Annual Banquet was once again held at the Western Region, this time being held at Swindon. An excellent event as usual; it included a full schedule of training day, a small exhibition area, the renowned and hard fought lock picking contest and the region's Annual General Meeting on the Sunday

At the Saturday evening meal the MLA's 2 prestigious prizes were awarded.

Firstly the Chubb Award

This most prestigious and well recognised award within the industry, is bestowed by the board of directors of the MLA on the person they feel has done the most to further the locksmithing profession in the previous year. The recipient in 2012 was Paul Etheridge, a man whose daily routine takes place in the hallowed corridors of Westminster and whose job is integral to maintaining the highest standards of security at the Houses of Parliament. The photo below shows the award being presented to Paul by the MD of Mul-T-Lock UK Steve Ross.

Then there was the Nigel Rose Bowl.

This award is for the person with the highest marks in the BLI exam. This year saw Graham Alexander of Keyhole Kates in Essex win the coveted prize. The photo below shows the award being handed over by Nigel Rose himself to the well deserving Graham.

Congratulations to them both from all of us at the MLA.

MLA Code of Practice

OBJECTS

The Objects of the Association shall be as stated in the Memorandum and Articles of the Association.

The following is a summary of some of these objects:

- a) To protect, preserve, promote and represent persons, firms or bodies engaged in the locksmithing industry.
- b) To advance education and training.
- c) To agree standards of conduct, practice and materials.
- d) To maintain a high standard by members for the protection of the public at large.
- e) To enable the Association to attain a recognised status.
- f) To prescribe, regulate and conduct examinations and to charge fees, award qualifications.
- g) To carry on business as technical locksmiths, security consultants, specialist wholesalers, retailers and dealers in locksmithing tools, equipment and members' services.
- h) To apply for, purchase or otherwise acquire patents and licences.
- i) To produce, publish and distribute a journal.
- j) Co-operate with any body for the purpose of promoting the association.
- k) To purchase or lease property and/or rights for the purpose of the association.
- l) To do all such other things as are incidental to the attainment and furtherance of the said objects or any of them.

CODE OF ETHICS

To assist the achievement of the above Objectives, Each member of the Association, by his acceptance and continued membership thereof, shall be deemed to have subscribed to the following:

- 1) To pursue his activities, conforming to professional standards and maintaining high ideals of personal honesty and integrity.
- 2) To abide by the policies and codes of practice of the Association, as established from time to time.
- 3) To analyse impartially and to the best of his ability, security problems receiving his attention and to advance the best possible solution for the protection of his clients.
- 4) To conduct himself in a dignified manner and to refrain from using improper or unprofessional methods in furthering his business.
- 5) To co-operate in advancing the best interests of the locksmithing and keycutting industry, always ready to apply his special knowledge, skill and training for the use

and improvement and betterment of his profession.

- 6) To encourage and promote loyalty in his profession by acting in a fair, reasonable and business- like manner in any dealings, especially those with any fellow member

INTRODUCTION

MLA Approved Companies' management and staff should provide products and services with skill and integrity. They should give all end-users the benefit of their experience in all aspects of security products and their applications.

There are five main areas of locksmithing services and the following codes are intended to clearly state a company's obligation to identify and interpret the requirements of the customer and to provide a fair and honest service to meet those requirements.

The codes also highlight specific exceptions that can occur due to the technical nature of some aspects of locksmithing and it is considered by the MLA to be fair that customers are made aware of these exceptions.

It is essential that the customer understands that the service or product does meet with their requirements and that they are aware of the costs or charges, either in writing or verbally and that they are also aware (if applicable) of the likelihood of any additional costs.

Certain lock and key systems are protected by law and replacement or extra keys will not be duplicated without the correct authorisation procedure. The company is obliged to operate these procedures to comply with law and in the best public interests.

INSTALLATIONS

MLA Approved Companies will be inspected periodically to stringent standards. Companies are dedicated to provide skilled and accurate workmanship, and are positively encouraged to maintain standards in Training, Equipment and Best Practices.

All companies must be properly insured to carry out security installations on, or to, a customer's premises.

Exceptions will occur if any alteration, amendment, removal or reinstallation is attempted by any persons other than the original installing company. This also applies if any undue wear and tear, abuse or act of vandalism is apparent.

If product failure or faulty workmanship causes a Lock-Out the company may reserve the right to ascertain the cause

and carry out any appropriate rectification, also to make charges where applicable, having advised the customer. Liability is limited to replacement value only of the same or similar equivalent product and in all cases limited to the guarantee periods.

VOLUNTARY CODE OF PRACTICE FOR CUTTING VEHICLE KEYS

This code suggests that you ask the customer to fill in the appropriate form and prove their identity under the following circumstances:

1. If a customer produces a vehicle part, for example - a door lock, petrol cap or ignition barrel.
2. If a customer provides a key number.

Customers should be asked to fill in the form and prove identity before you cut the key or order the key from a supplier.

The form can also be used in the case of key duplication when the member is uncertain that the customer is the rightful owner of the car.

If a member has regular customers that produce parts to cut keys for, it is recommended that the member has a brief record showing the date each key was cut and the registration number of the car.

It is the company's responsibility to get a form completed by the customer even if a key is ordered from one of the service providers; they will assume you have completed the formalities.

CODE OF PRACTICE FOR THE DUPLICATION AND/OR SUPPLY OF KEYS

This Code of Practice is effective from 1 January 2000 and supersedes all previous instructions/directions.

SECTION ONE - SCOPE

The Code of Practice shall apply to the duplication and/or supply of keys, whether on manufacturers original blanks or substitute blanks available from any legal source.

NOTE: It is expected that members, when asked to duplicate and/or supply keys, will (1) uphold the integrity of the Association and (2) protect themselves against the possibility of claims for damages by an authorised keyholder, should the member duplicate and/or supply a key to an unauthorised person.

SECTION TWO - PROHIBITED KEYS

Members are advised that it is illegal to duplicate keys which are protected by a current Patent and should never knowingly duplicate keys in contravention of the above.

SECTION THREE - DUPLICATION OF KEYS

These instructions apply to the duplication of keys, whether by hand or by machine, or cut to code, and/or supply of keys of the following types:

- (1) All keys identifiable as safe keys.
- (2) Master keys, Sub-Master keys, Sub-Grand Master keys and Grand Master keys.
- (3) Any key cut on a Restricted or Special Section profile blank and known to be used for master suites, restricted or registered keys.

SECTION FOUR - AUTHORITY TO DUPLICATE

The duplication and/or supply of such keys must only be carried out against a properly completed authorisation, such as the MLA "Authorisation for the Supply of Keys" form.

Alternatively, a properly constituted written customer's authorisation is acceptable. This must be on headed notepaper or a customer's order form, detailing the following:

- (a) Name, address and telephone number of the owner.
- (b) Name and address of the member requested to duplicate and/or supply the keys.
- (c) Quantity and type of key(s) to be supplied.
- (d) Markings (if any) to be put on such keys.
- (e) The signature of the owner or his representative, with the name also printed in capital letters and the signatory's position within the organisation.
- (f) Date of order.

A member requested to duplicate and/or supply such keys must be satisfied beyond all reasonable doubt as to the authenticity of both the authorisation presented and the identity of the person presenting the authorisation.

In the event of any doubt whatsoever, it is the responsibility of the member being requested to duplicate and/or supply security keys to check with the owner as defined, the authenticity of such an authorisation and to check the credentials of the individual presenting same. Full details of such investigations must be retained for a period of not less than two years.

SECTION FIVE - RECORDS

All members duplicating and/or supplying such keys must keep, for a period of not less than two years, all authorisation forms and letters. These are to be made available:

- (a) To the MLA Council upon request, to ensure that these instructions are being upheld or to assist in investigating complaints.
- (b) To a manufacturer of such keys, to prove that these instructions are being upheld and to assist in investigating complaints.
- (c) To an officer of the Police Force, Military Police, Customs and Excise, Inland Revenue or any similar authority acting in the investigation of crime.

SECTION SIX - CONTROL OF KEY BLANKS

Blanks for keys of a restricted section profile must be kept separately from standard blanks.

Under no circumstances may any restricted section profile blanks be altered to fit another section, nor may any blank be knowingly altered to fit a cylinder which the member believes to be of a restricted type. There are no exceptions to this rule.

Under no circumstances are blanks for security keys to be disposed of or sold to any third party without an official authorisation requesting such blanks and a copy of the owner's authorisation for the duplication of such keys.

CODE OF PRACTICE FOR OPENING & GAINING ENTRY TO BUILDINGS, VEHICLES & CONTAINERS

THIS CODE OF PRACTICE IS EFFECTIVE FROM 1 OCTOBER 1996 AND SUPERSEDES ALL PREVIOUS INSTRUCTION/DIRECTIONS.

SECTION ONE - SCOPE

The Code of Practice shall apply to any requests within a trading arrangement to open or effect entry into or onto all types of buildings sites, or property including vehicles, all types of containers, safes, cash box's, cabinets and desks, any type of lockable or security devices.

SECTION TWO - PROOF OF AUTHORITY

Commercial or Industrial Premises

Proof of authority must consist of the following

- Official Order or Letter of Authority stating clearly the date, the address at which the service is required with precise instructions of the service required and who the authorised site contact will be.
- Faxed Authority as in (a) above.

Private Dwellings

One or more of the following:

- Driving Licence showing address of premises.
- Passport or other acceptable means of identity or
- Neighbour identification.
- Police presence.

Vehicles

One or more of the following:

- Driving Licence showing home address quoted
- Passport or other acceptable means of identity or
- Vehicle registration documents.
- Police or road Association presence.

There are 4 other sections which deal with advice to members on how to verify the customers authority to request this service. It is therefore inappropriate to disclose these security measures. Any person having need of this information may apply to the MLA's Head Office stating the reason for the request.

For all of your security requirements

The advertisement for BM Locksmiths features the company logo at the top, which includes a key icon and the text 'BM LOCKSMITHS Your Only Genuine Local Locksmith'. Below the logo, it states 'NEW RETAIL PREMESIS NOW OPEN!!'. The ad lists various services: 'Do you know what we do?' followed by 'ALL types of lock supplied, repaired, fitted and upgraded- including INSURANCE APPROVED BS3621 locks', 'Alarm and CCTV systems supplied and fully installed', 'Window & Door Furniture', 'All types of keys Cut!', 'All types of electronic access control', and 'All types of safes'. A red banner at the bottom left says '24 Hour Emergency Service! NO CALL-OUT CHARGE! 01778 428533'. At the bottom right, it says 'WHATEVER your security need may be, BM Locksmiths can help!' and 'All our work is FULLY guaranteed'. Contact information is provided at the bottom: 'Unit 5 Victor Way, Bourne, PE10 9PT, Tel: 01778 428533, Mob: 07831 808342, info@bmlocksmiths.co.uk, www.bmlocksmiths.co.uk'.

I. ACKNOWLEDGEMENTS

The Master Locksmiths Association is grateful to the following organisations for their support and assistance in drawing up these guidelines:

- Association of Chief Police Officers (ACPO) (Project & Design Group-Technical Committee).
- British Hardware Federation
- Builders' Merchants Federation (BMF)
- Chief Fire Officers Association (CFOA)
- Door and Hardware Federation (incorporating Door and Shutter Manufacturer's Association and Association of Building Hardware Manufacturers).
- Glass and Glazing Federation (GGF)
- Guild of Architectural Ironmongers (GAI)
- Home Office Scientific Development Branch (HOSDB)
- RISC Authority (UK insurers technical advice body)
- Lloyds
- Sold Secure (part of MLA Group)

Note: These Guidelines give a general description of security for domestic buildings. Neither the guidelines nor the list guarantees that these methods are suitable for specific applications. It is the responsibility of the equipment supplier and/or equipment purchaser to ensure that any system is suitable for its particular application and that it complies with all legislation, standards, codes of practice or any other requirement.

Every effort has been made to ensure the contents of these Guidelines are accurate, however the Master Locksmiths Association does not accept any responsibility for loss arising from decisions based upon them.

I. INTRODUCTION

Theft from domestic property causes major problems for the Insurance industry and for specifiers of security products who might not be familiar with the industries involved. The reasons for these guidelines are:

- the Insurers possible requirement on a policy holder to maintain a minimum level of security to protect their premises, to use it when the premises are unattended or in part when they are occupied.
- the general obligation of householders to take reasonable security precautions for their own good.
- to provide easily understood information for the use of those not familiar with the Security or Insurance industries.

These guidelines are not intended to be applied to new construction or major refurbishment. For these applications British Standards BS 7950:1997 with Amendment 3, Specification for enhanced security performance of casement and tilt/turn windows for domestic applications and PAS 24:2012 Enhanced security performance requirements for doorsets and windows in the UK apply. These specifications are based on complete doorsets and window assemblies i.e. the door or window, including frame, hinges, locks, and fixings as a whole unit. The specifier is recommended to obtain doors and windows certified to these specifications.

Further guidance is given in BS 8220-1: Guide for security of buildings against crime – Part 1:2000 - Dwellings

Currently European specifications EN 1627-1630 also exist for the security of doors, windows and shutters. Products certified to the appropriate grades of these specifications are equally suitable.

These Guidelines assume that occupants are all able bodied. For users with disabilities, seek professional guidance before any installation.

Every attempt is made in these guidelines to be as practical as possible with recommendation or the specification of products, but there will always be occasions where alternatives will need to be sought because of the nature of a particular design, size or other feature of a door or window to be secured. In these circumstances the advice of a specialist in this field should be taken. A member of the Trade Division of The Master Locksmiths Association (denoted as "MLA approved company" and accompanied by the MLA registration number) should be contacted for such advice which should then be checked with the Insurers where applicable.

To comply with the requirements of most Insurers for thief resistant lock assemblies that necessitate the use of a key for egress, it is generally accepted that locks used on traditional external timber doors are certified to BS 3621:2007+A2:2012 Thief resistant lock assemblies – Key Egress. This indicates that the lock is part of an on-going test and audit programme to show it meets the requirements.

The MLA recommends that locks conforming to the latest version of any standard are to be used, however the MLA also recognises that insurers will on occasion accept locks, already installed that conform to earlier versions.

Where there is a requirement for means of escape (from fire) from the inside without the use of a key while maintaining security from the outside, lock assemblies to BS 8621:2007+A2:2012 Thief resistant lock assemblies – Keyless Egress should be installed.

Certifying to BS 8621 commenced in April 2005 and lock assemblies certified as complying with this Standard are listed within the links in Appendix C.

The introduction of new materials (e.g. Aluminium, PVC-U and Composite Materials) and designs used in the construction of doors and windows can make single point locking inadequate. The locks designed for these types of door are usually multi-point and therefore cannot be tested to BS 3621, BS 8621 or BS 10621. PAS 3621, PAS 8621 and PAS 10621 were published in 2011 and will provide minimum requirements for multi-point locks to be tested to. Locks produced prior to this date should have a minimum of three locking points and use a cylinder that meets the minimum requirement stated in 3 (b).

Nothing in this document or related documents shall imply that the installation of any security device will prevent unauthorised entry to a premise or that by following these guidelines insurers are obliged to issue insurance cover.

2. GENERAL CONSIDERATIONS

When considering the matter of minimum security requirements and the interpretation of these guidelines, users of these guidelines should be mindful of a number of factors:

(a) The adequacy of the door or window, frame thickness and the material quality together with the fixings of the frames to the surrounding structure might impact on the level of security provided.

(b) A degree of flexibility when imposing security requirements might, on occasions be necessary. Often, due to the nature of the door or window construction, or the material from which it is constructed, it might require the use of locks or locking devices in situations other than that for which they were intended. In such circumstances the advice of a Trade member of the Master Locksmiths Association should be sought, and written confirmation of their proposals obtained from any interested insurer.

(c) If improvements are required to the security of aluminium, PVC-U or composite material doors or windows it is stressed that this work should be undertaken by professionals. Again advice must be sought from an Approved Company Member of the Master Locksmiths Association who has experience in this type of work. Care should be taken not to breach manufacturers' warranties that might still apply.

(d) It must also be appreciated that some locks not certified to BS 3621 have in the past and could in the future be accepted by Insurers. Where this is the case, written confirmation by the Insurers of their acceptance of the product for its intended use should be obtained by the end-user. This recommendation also applies with the introduction of lock assemblies under BS 8621 and BS 10621.

(e) Insurers and specifiers should be mindful of possible conflict between occupier safety and security when the property is occupied. Careful consideration must be given

to the means of escape in the event of fire before specifying that locks should be engaged and the keys removed (using BS 3621:2007+A2 :2012 specification) before retiring for the night. Keys should be kept within easy reach of the occupant, but out of reach of an intruder.

If in doubt, consult any interested insurer and the local Fire Prevention Officer for guidance.

(f) External doors that are deemed to be used as an exit in case of an emergency should be locked in the manner specified for the final exit door, with the addition of a nightlatch that can be opened from the inside without the use of a key for use when the property is occupied. Where locks to BS 8621:2007+A2 :2012 are fitted, egress will be facilitated from the inside by the presence of the thumb turn.

(g) In blocks of flats and other buildings of multiple occupancy, the means of escape in the event of fire is an important consideration, particularly where the entrance door to the individual flat is the only means of escape. The use of Escape Locks that can be opened from the inside by a single action without the use of a key (but still retain their security from outside as described in BS 8621) is acceptable to Insurers subject to written confirmation. This type of lock will normally meet the requirements of the Building Regulations.

(h) New products may become available that conform to test procedures for security products, and carry the appropriate certification mark. When these are accepted by the organisations supporting these guidelines, and where suitable for the protection of a particular risk, their use should be encouraged.

(i) When making recommendations for the fitting of security items, consideration must be given to the type of risk involved relevant to the location of the premises. It will be necessary to increase the number of locks and fittings to doors and windows in high-risk areas. Advice should be sought from the local Crime Prevention Design Adviser, Architectural Liaison Officer, any interested insurer involved or an Approved Company Member of the Master Locksmiths Association.

(j) A list of Approved Company Members of the Master Locksmiths Association, recognisable by the logo "MLA Approved Company" is available from the Master Locksmiths Association. This list is also reproduced and updated on our website www.locksmiths.co.uk

3. MINIMUM SECURITY REQUIREMENTS

(a) Locks currently available certified to British Standard BS 3621, BS 8621 or BS 10621 should bear the standard number and the mark of the certification agency. These are listed in the web links in Appendix C. Such locks may be available in rim or mortice fixing. Locks for PVC-U and composite doors (when multi-point) should meet the minimum requirement set out in PAS 3621, PAS 8621 and

PAS 10621 published in 2011. Locks produced prior to this date should have at least three locking points and be combined with a cylinder that meets the requirements of 3(b). Locks that have been part of a PAS 24 door test are also acceptable. Written agreement for the acceptance of such locks should be obtained from the insurer by the policyholder.

(b) Lock cylinders installed before the implementation of these guidelines (November 1999) should have a minimum of five pins and an anti-drill insert. Thereafter, as a minimum requirement the cylinder shall meet the requirements of BS EN 1303:1998 Clause 6.7 Security Grade 4 (Table 10) or BS EN 1303:2005. Clause 6.8 Key related security Grade 5 (Table 9) and Clause 6.9 Attack resistance Grade 2 (Table 10). Technical specifications SS 312 and TS 007 were published in 2010 and 2011 and are to be used when doors are at risk of cylinder attack and may be a requirement by some authorities. Cylinders that are Sold Secure Diamond rated have been subject to an extensive attack test and offer a significant security upgrade to any door that requires a Euro cylinder. The Master Locksmiths Association recommends that for retro fit security upgrades, SS312 Diamond cylinders should be used as a cylinder change only solution or a TS 007 one star rated cylinder combined with a two star rated handle or a TS 007 three star rated cylinder (either TS 007 solution must achieve a total of three stars to be effective against attack).

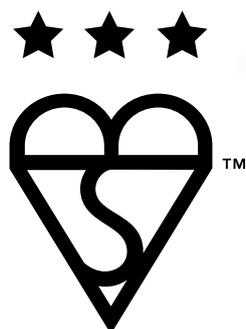

(c) Where any cylinder operated lock is used, the outside cylinder shall not protrude more than 3 mm from the face of the door or the lock furniture (handle plate or cylinder rose) where fitted. Lock furniture should be of the 'bolt through' type with the fixings being secured from the internal side only. Lock furniture should comply with BS EN 1906 Lever handles and knob furniture – Requirements and test methods – Annex A: Requirements for security lock furniture for use on burglary resistant doors – Grade 1 unless certified as a component of a door assembly satisfactorily tested to PAS 24. Lock furniture may consist of separate components of lever/knob handles on roses and cylinder roses or composite backplates. Where cylinder roses are fitted, these must provide the cylinder protection as required under BS 3621, BS 8621 or BS 10621.

(d) A limited range of other door locks, and most types of lockable bolt or window locks, are likely to be acceptable to insurers for the purpose of securing doors and windows. A proposed (to be issued in 2013) guidance document on Minimum Security Standards for Domestic Properties will provide full details. This will be available for download from www.riscauthority.co.uk

4. HINGED DOOR SECURITY

The type of lock and the position to which it is fitted on the door is dictated by the design of the door. It is therefore not possible to make specific recommendations regarding the fixing positions of additional security devices, as this will be determined by the position of the original fittings on the

THE ULTIMATE SNAP SECURE EURO CYLINDER WITH SOLD SECURE DIAMOND

**...AND A 3 STAR
TS007 BRITISH
KITEMARK**

the best snap secure lock. by far.

www.abs-secure.co.uk

door. The height at which the lock is fitted might also be determined by the level at which the user is standing when locking or unlocking the door, e.g. one or two steps below the door entry level.

For specific guidance reference should be made to BS 8220 Guide for security of buildings against crime – Part 1:200 Dwellings. However, the following is offered as a general guide:

4.1 Additional Mortice Deadlocks

Where the lock to be fitted is of the mortice type, the minimum thickness of the door to which it is being fitted must be 44 mm. The lock should be fitted approximately midway between the existing lock and the top or bottom of the door depending on which has the greatest unsecured distance, avoiding any cross rail or glazing bar joints.

4.2 Additional Mortice or Rim Security Bolts (Single Doors)

To be fitted horizontally (where possible) approximately midway between the top lock and the top of the door and the bottom lock and the bottom of the door.

Where a single lock conforming to the requirements of the insurance company is fitted, the additional bolts should be fitted approximately midway between it and the top and the bottom of the door.

Where bolts are fitted vertically they should be between 50 mm and 100 mm from the edge of the door, avoiding any joints.

For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts. Where doors do not form part of an escape route, loose key mortice bolts are suitable

4.3 Additional Mortice or Rim Security Bolts (Double Doors)

To be fitted vertically to the top and bottom of the doors between 50 mm and 100 mm from the front of the rebated edge of the door, avoiding any joints. It could be necessary to fit security bolts to the top and bottom of the first closing leaf only, if the doors are of substantial construction.

For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts on the first opening leaf, the first closing leaf being secured by loose key bolts. Where doors do not form part of an escape route loose key mortice bolts are suitable for both leaves.

4.4 Hinge Bolts and Security Hinges

Hinge bolts shall be fitted to all outward opening doors at a position of approximately a quarter of the door height from the top and bottom of the door, but not within 150 mm of the top or bottom hinges.

Hinges for use on burglar-resistant doors should comply

with BS EN 1935:2002 Annex C. These may comprise either such a design that the hinge pin can only be removed when the door is open, or alternatively, suitable composite security hinges incorporating hinge bolts within the hinge flap that enable the hinge to withstand shear loads should be considered.

4.5 Letter plates

Letter plates should be located with the aperture at least 400 mm away from any locks to stop access to the locking system through the aperture. The letter plate aperture should be in accordance with the requirements of BS EN 13724: Postal services- Apertures of private letter boxes and letter plates – Requirements and test methods Type 4 size 2 - 230 – 280 mm wide x 30 – 40 mm high. If these criteria cannot be achieved, additional measures might be needed to prevent access to door locks through the letter plate, such as the addition of internal security flaps or letter cages/internal postal boxes. Letter plates should be fitted horizontally at a height between 700 mm and 1700 mm measured from delivery floor level

Where the sole means of internally locking a door is hand (not key) operated, then it is recommended that the letter plate be omitted from the door. In this instance, alternative means for mail delivery shall be provided such as an external postal box complying with types 1, 2 or 3 of BS EN 13724:2002, in which case the aperture size will vary according to the dimensions of the postal box.

4.6 Stable Doors

Both halves of stable doors must be treated as separate doors.

5. WINDOW LOCKS

Where windows are not required to be opened, they may be screwed permanently shut. Security screws shall be used where this is to be done from the outside, and the heads countersunk and plugged.

The security of all ground floor and all accessible windows which are not considered as means of escape (e.g. from a flat roof) shall be considered. Openable windows that are over 600 mm high or wide should be fitted with a multi-point locking system or two window locks with removable keys. Sashes less than 600 mm need only be fitted with a single lock.

Where a lock is to be fitted to a window care must be taken to ensure that the material to which the lock is fitted does not become weakened by fitting it too close to existing fittings.

Where a window is required for emergency egress then it shall not be fitted with any type of key lockable system. In this instance the window should be fitted with laminated glass.

5.1 Louvre windows

Urgent consideration should be given to replacing louvre windows as it is difficult to achieve adequate security. If this is not possible, then all panes of glass (in louvre windows) should be securely fixed, with suitable adhesive, into their brackets or suitable grilles, bars, or shutters fitted. Louvre windows should not be installed in vulnerable locations. The use of plastic frame materials is not acceptable for a security application

5.2 Casement Windows

Where the casement window opening exceeds 600 mm, two locks are required. For side-hung casement windows over 600 mm high the additional locks should be fitted approximately quarter of the height from the top and bottom of the casement window. For top-or bottom-hung fanlights in excess of 600 mm wide, the locks should be fitted approximately one quarter of the width of the opening fanlight from either side of the sash.

5.3 Tilt/Turn Windows

Additional locks should be fitted to the bottom rail at the leading edge for security and also to prevent the accidental opening of the window in the side hung mode.

5.4 Vertical Sliding Sash Windows

Where the window opening exceeds 600 mm, the locks should be fitted on the meeting rail of the bottom sash, at approximately one quarter of the width, or on the vertical frame either side of the upper sash, directly above the meeting rail of the bottom sash.

Where there is a requirement for ventilation when the premises are occupied, vertical sliding sash windows can be provided with restricting devices suitably placed to provide a ventilation position, to allow them to be opened a maximum of 100 mm and remain secure. This is not recommended when the premises are unoccupied. The window should then be secured in the fully closed position.

6. SLIDING DOORS AND WINDOWS

All sliding doors and windows should be fitted with anti-lift devices to prevent them being removed from their tracks. Care should be taken to ensure such devices are fitted appropriately so that they do not go inside the section of the frame when the door/window is closed. Some sliding door locks have an in-built facility to prevent the door being lifted, e.g. swing hook bolts which rotate upwards to engage.

Additional locks fitted to sliding doors and windows should be fitted in such a manner as to ensure any force applied to open the door acts against the lock fixing screws.

Wherever possible, additional locks should be fitted to the top and bottom of the interlock of sliding doors and windows. However, there are some designs, which make this impractical.

Sliding doors/windows should not be secured in the ventilation position when the premises are unoccupied.

7. UP-AND-OVER DOORS

Work on improving the security of up-and-over doors should be undertaken by professionals who have experience in this type of work.

There are security locking products available for this type of door and the advice of a professional (MLA Trade Member) should be obtained prior to commencing improvements.

8. FRAME FIXING

It could be necessary in some instances to improve the strength of the fixings holding door or window frames to the fabric of the building. Due to the presence of pre-cast concrete, steel lintels or other construction details, it might not be possible to achieve the desired additional fixings to the head or sill of the frame. The type of fixings used will be determined by the material to be fixed and the material to which it is to be fixed, however frame-fixing screws and bolts are available for this purpose.

The following dimensions for the positions of additional fixings are offered as a guide.

8.1 Corner Fixings

Additional fixings made between 150 mm and 250 mm vertically and horizontally from the internal corners of the frame to be fixed.

8.2 Vertical and Horizontal Fixings

Additional fixings made at approximately 600 mm centres between the corner fixings of the frame to be fixed.

For greater detail of improved fixings, reference should be made to BS 8213: Part 4:1990 Windows, doors and roof lights – Code of practice for the installation of replacement windows and doorsets in dwellings

9. GLASS AND GLAZING

As far as security is concerned the main consideration is the ease with which glass can be broken to provide access to window or door hardware. The glazing specification chosen should meet the design and performance requirements of BS 6262:1982 Part 4 Glazing in buildings – Safety related to human impact. For those installations where a higher degree of “security” is needed the glazing should be in accordance with BS 5357 Code of practice for installation of security glazing

There are three main types of glass. These are:

9.1 Annealed glass

Annealed glass consists of, float, sheet, cast (patterns) and wired glass. It breaks easily and when broken forms large sharp fragments. While wired glass can be fractured, it will act as a barrier but only until the wire mesh in the glass is sheared.

The application of an appropriate plastics film can increase the resistance of annealed glass to penetration

9.2 Toughened glass

Toughened glass, (tempered glass), is an annealed glass, except wired glass, that has been subjected to a heating and rapid cooling process that imparts a greater strength to the material. It is resistant to impact by blunt objects but can be fractured by penetration of the surface compressive layer. When fractured, the glass will not act as a barrier. In buildings it is usually found in 'risk areas' which include doors and adjacent windows, low windows, bathrooms, landings etc. Typically toughened glass is around eight times stronger than annealed glass but when it breaks it forms a multitude of small fragments. It is also vulnerable to breakage with a sharp point such as a centre punch.

Due to the method in which it breaks, toughened glass offers very little security. Its value is as a safety glass.

9.3 Laminated glass

Laminated glass consists of two or more layers of annealed glass bonded together by means of transparent plastic (poly vinyl butate - PVB) interlayers. When the glass is attacked the glass layers fracture but remain in place, held by the PVB interlayer. Thus laminated glass offers both increased security and safety over annealed glass. Typical laminated glass found in domestic buildings consists of two layers of glass and one interlayer to a total thickness of 6.4 mm (soon to increase to 6.8 mm). However, the number of glass layers and interlayers can be increased to provide enhanced security such that, eventually, bullet-proof glass can be produced.

The most common failure mechanism of laminated glass is for it to 'balloon' and fall out of the frame under repeated impacts. However, the time taken for this gives an enhanced level of security over other types of glass

9.4 Double glazing

Double glazing can be in the form of:-

1. insulating glass units i.e. two or more panes of glass hermetically sealed at their perimeter. These provide the intruder with two or more panes to break.

2. double windows i.e. two separate single glazed windows in the same opening. These assemblies provide a similar deterrent but only if the inner window is secured.

9.5 Plastics glazing material

Plastics glazing sheet material consists of either a single sheet or combination of sheets laminated together. The performance of these materials is dependent on the polymer type, thickness, and support condition. The advice of the manufacturer should be sought in respect of their security and fire resistance performance, as appropriate.

9.6 Glazing

All glass or plastics glazing sheet material should be secured to the window or door structure in such a manner that it cannot be easily removed from the outside.

10. GLOSSARY

Anti-lift device. Device which prevents a door or window from being lifted in its aperture, where this lifting would decrease the effectiveness of a lock or enable the door/window to be removed.

Barrel bolt. Surface mounted fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening. The shoot is provided with a knob, loose key or similar for operation by hand.

Bolt (1). Movable part of a lock or latch that usually engages a component fixed to a frame and is withdrawn into the case,

Bolt (2). Fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the sliding part being provided with a knob, loose key or similar for operation. It may be surface mounted, or morticed.

Certified. A product subjected to a testing and ongoing audit programme by a MLA approved organisation.

Deadlock. Lock that contains only a deadbolt.

Escape lock. Deadlock that can be opened (even when locked) from the inside by a single action without use of a key.

Escutcheon. Surround with a shaped hole, with or without a pivoted cover plate, primarily to protect the door leaf from abrasion damage caused by key insertion. This could be for decorative purposes or to increase the security of the locking device.

Flush bolt. Recessed (flush) fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the moving part being provided with a lever, slide bar or knob.

Hasp and staple Two-piece fastening for doors which can be secured by a padlock. The hasp could be attached to a fixed or swivel bar.

Hinge bolt. Fixed projection on the hinge side of the door or window. The projection engages into a keep when the door or window is closed. Also known as dog bolt

Latch. Self engaging device, usually operable from both sides, which holds a door or window in the closed position and is released by hand without the use of a key.

Lock. Fastener that combines within one case a latch operated by a handle and a deadbolt which secures the door or window in the closed position

Mortice lock/bolt. Lock/bolt where its body is fitted in a mortice cut into the closing edge of the door or window.

Multi-point lock. Lock that has a latch bolt and a number of other bolts positioned remote from the lock case but connected by rods, which are thrown by means of a single action.

Night latch. Latch with a single bevel latch bolt that is operated internally by a knob and externally by a key which automatically engages when the door is shut.

Night vent or ventilation position. Position in which the door or window can be secured whilst slightly ajar. This usually offers only limited security.

Padbar A device spanning the full width of the door opening with supporting brackets or staples fixed to the frame and secured by a padlock

Padbolt/padlock bolt. Door bolt which can be secured in the locked position by means of a padlock.

Rim lock/bolt. Lock/bolt for fixing on the face of a door or window.

Security bolt. Mortice or barrel bolt which can only be withdrawn by the use of a key.

Security screw. Screw designed so that it either cannot be removed when fixed or which requires a restricted access tool to remove it.

Strike plate. Flat metal plate, appropriate to the latch or lock, fixed to a frame to engage a bolt(s).

Throw - bolts with linear movement - Distance that the dead bolt travels from the fore end of the lock in an outward direction under the action of a key, measured perpendicular to the fore end.

Throw - hook bolts with arcuate movement. - Distance from the tip of the bolt travels from the unlocked to the locked position measured parallel to the fore end of the lock.

II. STANDARDS

The following standards are referred to in the text. The latest version of the standard shall be used.

BS 3621. Thief resistant lock assemblies – Key egress.

BS 5357. Code of practice for installation of security glazing.

BS 5544. Specification for anti-bandit glazing (glazing resistant to manual attack).

TS 621. Thief resistant electromechanically operated lock assemblies.

BS 6206. Specification for impact performance requirements for flat safety glass and safety plastics for use in buildings.

BS 6262. Part 4 Glazing in buildings – Safety related to

human impact.

BS 7950. Specification for enhanced security performance of casement and tilt/turn windows for domestic applications.

BS 8213-4. Windows, doors and roof lights Part 4. Code of practice for the installation of replacement windows and doorsets in dwellings.

BS 8220-1. Guide for security of buildings against crime – Part 1. Dwellings.

BS 8621. Thief resistant lock assemblies – Keyless egress.

BS 10621. Thief resistant lock assemblies – Dual mode.

PAS 24. Enhanced security performance requirements for doorsets and windows in the UK.

PAS 3621. Multi point locking assemblies – keyed egress.

PAS 8621. Multi point locking assemblies – keyless egress.

PAS 10621. Multi point locking assemblies – dual mode.

BS EN 12209. Building hardware – locks and latches.

BS EN 1303. Building hardware - Cylinders for locks.

BS EN 1906. Building hardware – Lever handles and knob furniture.

BS EN 1935. Building hardware- Single-axis hinges.

BS EN 12320. Building hardware - Padlocks and padlock fittings.

BS EN 13724. Postal services – Apertures of private letter plates.

EN 1627-1630. Windows, doors, shutters - Burglar resistance.

SS 306 Sold Secure Specification for Mechanical, Domestic Door Security Systems.

SS 312 Sold Secure Specification for Cylinders for Locks

DHF TS 007 Enhanced Security Performance Requirements for Replacement Cylinders and/or Associated Security Furniture

APPENDIX A

Specification of acceptable hardware

A) All doors Hinge bolts or security hinges with protection from hinge pin removal on all outward opening doors.

B) All doors A lock certified to BS 3621, BS 8621 and BS 10621 together with its approved striking or box plate and

accessories as tested.

C) All doors An acceptable alternative lock with the lock manufacturers approved striking or box plate and accessories as approved by the Insurers.

D) Single door A multi-point lock system with a minimum of three horizontal locking points with Pedestrian a central bolt (minimum throw 13 mm) and two dead or hook bolts garage (minimum throw 20 mm). All locked simultaneously by one operation of the doors key. Alternatively a multi-point lock certified to Sold Secure specification SS306.

E) Sliding Anti-lift devices

F) Sliding Main locking system plus key operated patio door lock or security bolts (minimum throw 9 mm) at the interlock at bottom of the door and if practical at the top of the door. Alternatively a patio bar.

G) Sliding A hook lock certified to BS 3621 or BS 8621 together with its approved striking plate and accessories as tested

H) Sliding A multi-point lock system with a minimum of three horizontal locking points Incorporating hook bolts (minimum throw 20 mm) and/or vertical shoot bolts (minimum throw 14 mm) locking into the head and sill of the door frame. All locked simultaneously by one operation of the key. Alternatively a multi-point lock certified to Sold Secure specification SS 306

J) Double doors The main locking system plus 2 key-operated rim or mortice security bolts 2nd closing leaf (minimum throw 14 mm) (casement doors)

L) Double doors Two key operated rim or mortice security bolts (minimum throw 14 mm) 1st closing leaf (casement doors) Windows

M) Double doors Two flush bolts (minimum throw 14 mm) mounted on door edge and 1st closing leaf concealed when doors are closed

N) Double doors- A multi-point lock system with a minimum of three locking points with a central 2nd closing leaf bolt (minimum throw 13 mm) and two dead or hook bolts locking into the head and sill of the door frame (minimum throw 14 mm). All locked simultaneously by one operation of the key. Or a multi-point lock certified to Sold Secure specification SS 306

P) Windows A window lock with removable key

Q) Windows A substantial locking handle with removable key

S) Windows A multi-point locking system with removable key

T) Doors A door-set certified to PAS 24 or ENV 1627 class 2

U) Windows A window certified to BS 7950 or ENV 1627 class 2

V) Doors to A heavy duty padbar bolted to the door and frame and fitted with a padlock outbuildings and fittings certified to EN 12320 Grade 3

APPENDIX B

Hardware required to be fitted (as listed in Appendix A)

Hinged final exit door A plus B, C or D, or T

Other single hinged external doors A plus B, C or D, plus L (2 off), or T

Pedestrian doors on garages and domestic A plus B, C, D or V, or T outbuildings

Double doors (1st closing door) A plus L (2 off) or M (2 off)

Double doors (2nd closing door) A plus B, J or N

Sliding doors E plus F C, G, or H

Louvre Windows See text

Accessible windows and ground floor L, P, Q, S or U openings (But not emergency egress windows)

A sash less than 600 mm in width or height requires a minimum of one locking point. For all other sashes a minimum of two locking points is required

Licensing the Professional Locksmith

The Master Locksmiths Association (MLA) is the leading Trade Association for the locksmithing industry.

In the absence of Government based licensing (meaning that anyone can call themselves a locksmith), the MLA can provide you with peace of mind through it's licensing scheme.

MLA licensed locksmith companies, who undergo strict vetting (including criminal record checks, regular inspections to ensure quality etc), are able to provide advice based on knowledge and experience, recommend products that are fit for purpose as well as provide professional installation and maintenance services.

The key to your security needs.

Find your nearest MLA approved locksmith by contacting the Association:

Tel: **0800 783 1498** · Fax: **01327 262539**

Web: **www.locksmiths.co.uk**

E-mail: **enquiries@locksmiths.co.uk**

MLA Approved Company Sector

The Master Locksmiths Association was first conceived in 1957 and was the idea of the Chubb Lock Company and one or two London Locksmiths. The prime mover was Mr. Steve Fallshaw, then a locksmith in The Barbican, who became its first Chairman when it was formally founded early in 1958. The original sixteen members decided the new 'association' should be known as The Greater London Master Locksmiths Association (GLMLA).

By the end of the first decade it had grown nationally with a wide distribution of members from all parts of the United Kingdom. At this time it elected its first national President namely Mr. Steve Stephens of Oxford. The association by now included members from overseas and a healthy growth has been maintained, we now number almost 1500 members in all sectors.

In the early 90's the association restructured to meet modern demands, retaining its title Master Locksmiths Association (MLA) it formed three sectors. They are the 'British Locksmiths Institute' (BLI) for its individual members' skill qualifications, 'Guild of Keycutters' for all producers of keys wishing to comply to standards and 'Approved Company' for trading companies. The fourth 'Affiliates' sector remained unchanged and represents the manufacturers' and suppliers to our industry.

Aims of the Approved Company Sector

Companies and locksmiths trading in their own right, with retail premises or operating as a mobile locksmithing business, join the MLA Approved Company sector. It is this sector of the Association that trades directly with the public and private sectors in the High Street and through Yellow Pages, and other advertising media.

The Approved Companies inspectorate means the MLA can demonstrate that all Company Members are meeting high standards. Each company is inspected on a regular basis, thus ensuring that its members and their operatives maintain standards in workmanship and administration. Also members are expected to conform to legal requirements and that customer charters exist to service customer satisfaction.

Inspections have the effect of making locksmithing companies more accountable for their daily operations. Approved Company members are made aware that the MLA considers that training is also a valuable means to maintaining standards. Training is offered at the purpose built, state of the art training facility at the MLA's Head Office in Daventry.

Continued growth of the Approved Companies ensures that the MLA can offer a national network of locksmiths and the Associations head office in Daventry refers enquirers to their nearest approved company. A National 0800 number enables potential customers to find the nearest member quickly or check those companies displaying the MLA logo are bona fide members.

The Logo depicted here is the one that is advertised by an approved company on their premises, vehicles and stationery, confirming to the public the standards expected of them.

Channels of arbitration exist to fully investigate any complaints or disputes, should they arise, and the MLA advises or takes any necessary action. The Board of Directors continually looks at consumer matters and advises members when appropriate.

The Approved Company sectors operates schemes whereby discounts may be available to policyholders of most well known insurance companies and they provide the service behind many major help-lines.

The Master Locksmiths Association "Approved Company" helpline is available to locate your nearest locksmith: — 0800 783 1498 or alternatively you can visit our website www.locksmiths.co.uk where you find you local MLA locksmith using the integrated search functionality.

YOUR SECURITY IN YOUR CONTROL

Mul-T-Lock CLIQ Remote allows you to program keys from the other side of the World!

And closer to home, it allows you to program keys without the need to return to a central administration point.

With a full remote audit trail available, and the benefit of wirefree installation* Mul-T-Lock CLIQ Remote is the ideal solution for security upgrades where access control flexibility is required along with the highest level of key control and mechanical locking.

- Encrypted electro-mechanical key and locks
- Full audit trail in key and lock
- No power source at doors required
- No hard wiring*
- Quick to implement

- 1. Remove your old cylinder or padlock**
- 2. Install a Mul-T-Lock CLIQ replacement**
- 3. You're now access controlled**

Upgrading to Mul-T-Lock CLIQ is as easy as 1, 2, 3!

Wall programmers require a 12V DC power supply and network connection

MUL-T-LOCK®

The ABS Snap Secure lock features a unique patented system that ensures if the lock is snapped it locks the cam into position within the lock case to provide a secure and effective barrier against entry.

ABS was one of the first to be accredited with the TS007 (three star) British Standard and the new SS312 Sold Secure Diamond Grade and also has Secured by Design accreditation. ABS is the only retro-fit euro-cylinder to hold all of these standards.

2012 saw a huge demand for ABS as national media coverage on the BBC News at 10 highlighted that 'lock snapping' has become a preferred method of forced entry and the police have urged the public to consider a review of their home security.

Insurance companies have also now started to warn the public about the problem with standard euro cylinders. Hopefully this will continue throughout 2013 and security advice featuring the new standards will be updated in policy booklets.

This year we look forward to supporting and working with more Locksmiths to further develop the ABS range and improve on what we have achieved so far.

We've now launched a great range of point of sale material that offers something completely unique in the market place. We have a video display unit that shows how ABS

effectively blocks out an intruder and how it is completely different from a standard lock.

We've also got the ideal 'Locksmith Companion' demo flight case to help when you're out and about. This holds all the tools and marketing materials necessary to promote ABS.

We will also continue to provide more marketing support to help locksmiths develop their websites and marketing plans throughout 2013.

If you'd like more information or would like us to demonstrate the ABS lock to you please contact us on:

01484 711700 or visit www.abs-secure.co.uk

SMART ACCESS

**Smartair Wireless is easy to install
and provides easy upgrade of existing
access systems.**

Smartair Wireless is a convenient, easy to install, wire-free battery operated electronic security handle set operated by card or fob, which can be retro fitted to work with a variety of standard mortice lock cases.

By utilising the wireless hub it is possible to connect the doors to your computer via the existing computer network, enabling you to receive audit trails, delete and add users and open and close doors all in real time. Functions as a standard access control system with the convenience of reduced wiring.

The ideal solution for locksmiths!
