ABS

THE ULTIMATE **DIAMOND RATED** HIGH SECURITY EURO CYLINDER

ABS was launched in 2009 and has been continually developed to meet and exceed the most robust testing standards for Euro cylinders.

With patented break secure cam technology, advanced drill, bump and pick features the ABS lock remains the only retro-fit cylinder to have successfully passed the SS312 Diamond Standard year-after-year.

No need for a security handle or guard - ABS is a quick retro-fit Euro cylinder range.

Also available in the range - ABS Thumbturns, Rim cylinder and Padlocks.

2015 - What an Interesting Year It Could Be For Locksmiths

In recent years we have seen new standards being introduced for lock and door hardware products and now legislation is being introduced in some European countries for installation, servicing and even the duplication of restricted keys. The Scandinavian countries have long been very progressive in setting out standards and education for their members and now other European countries are following their lead. More legislation and expense you might think but maybe, just maybe, it will save our profession and livelihoods from the maintenance companies and all the part time lock changers that have invaded the lock business. This is not unique to UK but is happening all over Europe where some of the ELF national locksmith associations have worked tirelessly lobbying for licensing and proper standards to be introduced to protect bona fide locksmiths.

Licensing for locks and safes has been drafted in Ireland and Finland which will be introduced this year. This will require anyone fitting, opening, servicing, changing locks and safes to have a license to do so. The license will also be required to duplicate patented, safe and transponder keys for vehicles. With support from the insurance companies, I believe this can only be a good thing for our industry at a cost of around £15 per week, it will increase business and profits along with securing the future for locksmiths and the industry in general. With knowledge of product standards /requirements and the technical ability, locksmiths will surely be the winners in a legislated industry.

ERSI (Italian locksmith Association) with the help of ELF and

other national locksmith associations including MLA, have accomplished getting Locksmithing recognised as an official profession in Italy as the locksmith profession is too small to have its own EU NACE code. As locksmiths are now formally recognised in one EU country, it is only a matter of time before other EU countries adopt it. What this means is that each new entrant into the locksmith trade will have to undergo an apprenticeship or a recognised course to practise. This will exclude new entrants into the trade just setting up without any qualifications in the future.

The ELF convention will take place in Dublin in 2015. This will include an international conference where some of the international leading figures in the lock industry will discuss future trends in our industry. Already participants from the four corners of the world have booked to attend and it will truly be an international event with locksmiths from over 50 countries expected to attend.

May I take this opportunity of wishing you and all MLA locksmiths and affiliates every success in 2015 and as members of ELF, you can be assured that me, my board and all national locksmith associations will work as hard as possible on your behalf with government bodies and manufacturers to improve your life as a locksmith. I am already looking forward to MLA Expo in Telford in October which as always will be the largest exhibition for locksmiths in Europe.

Dave O'Toole

President of the European Locksmiths Federation

Dave O'Toole has been involved in the locksmith business for 35 years. He owns and operates a retail and service locksmith business in Dublin. He is past President of the Associated Locksmiths of Ireland and has been President of the European locksmith Federation since 2005. He has received numerous awards within the locksmith industry including, MLA Chubb Award, ALOA Presidents Award, Finland's Gold Leaf Award and more recently The GPLA Award.

MLA Overview

The Master Locksmiths Association (MLA) is the leading trade association for the locksmithing industry. A truly not-for-profit organisation promoting the skill and integrity of its approximately 1,400 members, it was established over 50 years ago to set and promote standards of conduct, practice and materials within locksmithing. Recognised as the authoritative body for locksmithing by the police, home office, British Standards Institute (BSI), The Risk Insight, Strategy and Control Authority - RISCAuthority (formally IPCRes, the UK property insurers' technical group) and Building Research Establishment (BRE), the MLA also has a subsidiary company, Sold Secure, which performs certification of security products via manual attack testing.

MLA member companies, who undergo strict vetting (including criminal record checks, regular inspections to ensure quality etc.), are able to provide advice based on knowledge and experience, recommend products that are fit for purpose as well as provide professional installation and maintenance services. Details on your nearest MLA approved company can be found in the directory section of this handbook or on our website www.locksmiths.co.uk.

The MLA also provides training from its purpose built training facility based at the company headquarters in Daventry, consisting of a classroom type environment for theory work and fully equipped workshop for the hands-on practical elements (N.B. due to the content of some courses they may only be open to MLA members). Courses currently include general locksmithing; opening; access control, safe engineering and Auto Locksmithing, with others currently under development. The MLA was fundamental in the project of developing a nationally recognised qualification and formal apprenticeship for the industry and is delighted to be working with the sector skills body Skills for Security to deliver "off the job" training as part of the official locksmith apprenticeship.

Unit 1b, Spinney View, Stone Circle Road, Round Spinney, Northampton NN3 8RF

Overview from the Director of Business Development

2014 saw the launch of the long awaited apprenticeship and nationally recognised qualification with 2 intakes of students having taken residency at the MLA for their general locksmithing course and the first intake also taking their opening course (same planned for early 2015 for the 2nd intake) and there are plans for the 3rd intake to start in the new year too, so the significant investment that the MLA has put into making locksmithing a “proper job” and helping those companies who want to take on an apprentice has really proved worthwhile.

2014 also saw significant strides in promotion for MLA approved companies. Not only is there the constant presence in regional and national newspapers and stints on the radio, but the MLA web presence continues to grow significantly. Full details can be found elsewhere in this Handbook, but suffice it to say, general hits on the site, and in particular hits on the ‘find a locksmith’ pages, have increased significantly. We have also achieved ‘top 3’ Google rankings for numerous members’ pages when searching for local locksmiths. All in all, members are increasingly benefitting from their subscriptions. ‘Approved Company Membership’ has proved cost-effective for one particular member, who recently joined and within 2 months had covered the cost of their exam, joining fee and membership subscriptions; thanks to the work from their MLA webpage.

The marketing/promotion of MLA members as well as the provision of marketing materials to our members, is something that will be built on in 2015. With the retirement of Gill, the board have agreed to my suggestion that we employ a marketing officer; somebody who will help Chris on the website with the writing of content, somebody that

can up our game when it comes to social media, and somebody who can generate high quality marketing material/content not only for us but also for our members. I’m delighted to say that Guy Fox joined us in January 2015 to fulfil this role which will be another big step in the MLA’s drive to ensure members get the most from their membership subscriptions.

The modular exam has gone from strength to strength with numerous members having highlighted the fact that having the time to calm down and go through things before the actual exam element itself really helped them. It was particularly pleasing to talk to one of our Associated Locksmiths who was taking the exam as he wanted to become an approved company and benefit from the significant promotion he could see company members benefitting from. Whilst always sceptical about the “key cutting by hand” element of the BLI exam the member had persevered and learnt the skills and actually found that not only were the skills learnt useful, but they actually earned him money.

MLA Expo ’15 is just around the corner and I have to admit I’m amazed by the way stands have been selling. At the time of writing (just under a year out from the event itself) we’re already 80% sold out! Figures we’ve never seen before, and not only are so many signing up to visit but they’re also taking big stands. So it looks like the industry’s main show is going from strength to strength.

With 2014 having hopefully seen the green shoots of recovery, I doubt 2015 will be a walk in the park; plenty of hard work and effort lie ahead of us, but as I’ve said before it’s a challenge we shall relish and, as always, take head on!

Yours Sincerely

A handwritten signature in black ink that reads 'Steffan George'. The signature is written in a cursive, slightly slanted style.

Dr Steffan George

MLA Member benefits

So why join the MLA? What's in it for the locksmith? As well as the training and MLA Expo mentioned elsewhere in this handbook, there are a significant (and ever growing!) number of other benefits to MLA membership. These include:-

Members Journal

All members receive the association's official magazine "KEYWAYS" as part of their membership subscriptions. This is an in-house magazine for members only, with hints, tips, new products, information on the association, meetings, exhibitions, members' letters and membership details.

Regional Meetings

Members at all levels are encouraged to attend regional meetings where they can meet their colleagues in the association, talk to experts, listen to seminars and visit small exhibitions. The MLA has recently implemented a Continued Professional Development scheme for which points can be gained by attending the training provided at these meetings.

Members Forum

There is an interactive web based forum for MLA members to share information, ask questions and further enhance their knowledge, whilst also networking with colleagues and sharing work.

Supplier Discounts

- A number of Suppliers, including MLA affiliate members provide significant discounts on their products or special deals to MLA locksmiths, this can be anything up to 25%.
- We also have a special deal with Smartwater where a specific MLA only Home Security pack is available (at discounted rates over RRP) which when sold provide the MLA member with cash back.
- There are numerous special sections for MLA members.

Technical Assistance

- The MLA's Technical Manager is on hand to help answer any questions you may have relating to for example lock standards etc. By sitting on the various lock related working groups and British Standards Committees the technical manager has first-hand information as soon as items are discussed and provides regular feedback to members via articles in the association's journal or by presentations at regional meetings.
- A significant amount of useful information (links to useful documents etc) is available via the members section of the website.
- The MLA has also purchased access to the AIS Safe List and are able to provide cash rating info to members who ask about specific safes.

Health & Safety and HR support

- MLA Approved Companies and Affiliate members get free access to specialist support in the vital areas of H&S and Personnel law as part of their company membership subs. Personal members get discounted access to this service.

Insurance Related Benefits

- The MLA has negotiated preferential rates with a number of insurance brokers. These include specialist policies for locksmiths and discounted general policies.
- Members are also eligible for specialist healthcare cover via deals done with 2 companies
- MLA members have the option to benefit from a 30% discount over standard prices for the use of DebtorController.com, a low cost online debt collection service specifically designed to make it both easy and extremely cost-effective for businesses to secure monies owed to them using an online system that automates the process of debt recovery.
- Banking advice is available from one of the UK's leading independent banking advisors as well as independent financial advice from a leading firm of advisors.

- Discounted mortgage and pensions are available to members
- Discounted credit card processing rates are also available via 2 major suppliers. Terminals, including mobile terminals for taking payments away from the office, are available to members at discounted rates. The association also has a scheme with a 3rd supplier specifically for members maybe don't require terminals, or want only a mobile terminal to take the occasional card payments, or who don't want the high standing charges associated with credit card terminals.
- Discounted business finance is offered via the BIRA Bank. This also includes access to the BIRA clearing system, a system that helps you save time as well as bank charges by paying all your suppliers with one cheque via BIRA's clearing house.
- Asset finance is available via a partnership with a major player and this extends to enabling members to offer finance to customers for specific jobs thereby helping the customer's cash flow whilst enabling the member to be paid in full immediately.

Vehicles

- There are many vehicle related deals available to members, the main one being a range of significant discounts the MLA has negotiated with Vauxhall (on both its commercial range and cars)
- Discounted AA membership is available to members as well as special rates with Bodyshops online.

Advertising & Promotion

- As well as being advertised on the MLA's find a locksmith page, in this handbook and in the Security Industry Directory, MLA approved company members can also advertise in corporate boxes in various directories. They are also automatically entered onto a number of websites and have the option of being included in various other directories either at discounted rates or in ones which are limited to MLA members only.
- Members can benefit from a 25% discount on website creation and hosting and get a free website stats package via a deal brokered with Site Wizard.
For those who don't want a whole website then a "webvert" can be offered; a simple one page site so that you at least have a web presence with your own dedicated web domain and associated e-mail addresses
- The SoleTrader Group are offering MLA members significant discounts on websites as well as offering corporate clothing and discounted business stationery.
- Mobelio are offering MLA members discounts for mobile specific websites

Admin/Paperwork Assistance

- MLA members get discounted access to YourTradeBase software. A web based solution to help you keep on top of your paperwork, manage your workload and win more work.

Telecoms

- The MLA has teamed up with a leading Telecoms provider to offer members discounted telecoms deals for landline, mobile and broadband requirements

Training

- MLA member are eligible for a discount on the FDIS online diploma in Fire Doors
- Distance learning courses via partners covering topics such as H&S, selling skills, basic retail legislation, customer care etc.
- A specific web based distance learning platform is being launched with discounts for MLA members.
- 20% discount on Tavcom training

Others

- Discounted Holidays to Tuscany
- Health & Safety and Personnel support via various partners
- PNC Stolen Vehicle checks (via Retaina Group)
- Discounted British Standards
- Specialist Intellectual Property Rights advise and discounted rates

If you're interested in more details of any of these benefits then please contact the association on 01327 262255 or enquiries@locksmiths.co.uk

MLA Training

MLA locksmithing technical courses are taught by tutors who have a significant amount of experience to pass on to students and are all experts in their field.

The establishment of a purpose built training centre at the MLA's head office enabled the organisation of a basic training programme in 1992. This has been subsequently added to an improved to become what is now very successful training package, culminating in the BLI Exam which is renowned throughout the locksmithing industry as the only formal locksmithing exam based accreditation.

The exam itself is split into 4 parts and includes a written section on locksmithing knowledge and 3 practical parts which cover fitting, opening and cutting a key by hand.

The MLA's technical excellence in training has been recognised by the military with the awarding of preferred supplier status to the Career Transition Partnership as well as being designated an Enhanced Learning Credits scheme provider (No. 1681)

The MLA's training has also been recognised in the past by City & Guilds where we used to be an Approved Training Centre (No. 027758) offering a tailored C&G award in

basic locksmithing (No. 1841) however this had to be withdrawn as we were not "conveyor belting" enough students through to make the commercial figures for C&G. During the development of the apprenticeship we also became an approved centre for the awarding body HABC (Highfield Awarding Body for Compliance) however when the details for the apprenticeship were developed it became apparent that as the MLA is providing the 2 "off the job" training courses for the apprenticeship to Skills for Security, this HABC approved centre status was no longer required.

Courses Available include:-

Technical Courses

- General Locksmithing
- Opening
- UPVC
- Safes
- Access Control
- CCTV
- Wireless Alarms
- Electrical Safety
- Fire Regs
- Asbestos Awareness

New courses are constantly under development so please contact MLA head office or visit the website for more information

Why do courses in a particular order?

The MLA puts particular emphasis on providing high level of training in the best fashion. For this reason, unlike many other training schools we only offer opening courses to more experienced locksmiths or those who have done the general locksmithing course. The reason is to ensure a general understanding of the principles of how locks work to ensure the maximum is gained from the opening course (and the techniques learned can be implemented to the best effect)

We are also careful in what we teach to whom, requiring DBS (formally CRB) checks to be undertaken before we will teach opening techniques.

In fact the MLA is the umbrella organisation for DBS

checking within the locksmithing industry, having been added to the exceptions order for the rehabilitation of offenders act back in 2009. (More information on this is available on the MLA's website)

General Locksmithing Course

This 5 day course is aimed at people looking to join the locksmithing industry, or those who have just started out and wish to learn "best practice" from master locksmiths.

Topics covered in the General Locksmithing Course include :-

- Basic Locksmith Tools.
- Basic of Master Keying
- Blank Identification & the basic of key cutting to Pattern
- Brief History of safes & locks
- Door & Frame Construction
- Health & Safety
- Key Machine & workshop safety
- Key Procedures for Restricted & Registered Keys
- Keycutting to a: Cabinet, Mortice & Safe Lock
- Mechanical & stand-alone Digital Locks
- Mortice & Rim Lock Fitting
- Padlocks & Locking Bars.
- Principle of Lever, Disc Tumbler & Pin Tumbler mechanisms & key differs
- Product Knowledge
- Specialist Door Locks, UPVc, Aluminium & Multi-point
- Stripping & reassembling of Lever Locks & Pin Tumbler Cylinders
- Stripping a Rim Cylinder & Cutting a key by hand.
- Window & Ancillary Door Locks

Attendees on our general locksmith course also get the excellent MLA Mortice Lock Encyclopaedia.

Opening Course

This 2 day residential course aimed at Advanced Student and above and covers:-

- Theory & terminology
- Opening authority procedure
- Lock identification
- Pick making & Picking tools
- Silver Soldering Demonstration
- Opening techniques and skills demonstration for various lock types

Workshop for students to implement skills learnt [For security reasons, full details of this course are not publicised]

Students are taught to produce their own toe picks, jiggers, various bypass tools and simple 5 & 6 lever padlock picks. Various picks available for purchase are then discussed including the triple pick, 114 cam pick, Faille Safe's Securefast Pick, 2 in 1 picks, overlifters, Bob Curry's drill templates and several of Paul Sauber's bits.

Picking by hand as well as by pick gun is covered as is bumping. Lock recognition also forms a large part of the course

UPVC

This 2 day residential course covers all aspects of this increasingly popular material and therefore growing business opportunity for locksmiths.

Areas covered include:-

- Construction of profile extrusion
- Door mechanisms
- Door hinges
- Glazing doors & windows
- Opening failed/jammed door mechanisms
- Multipoint upgrading
- Inline Patio's
- Tilt & Slide Patio's
- Casement Window friction stays
- Casement Window mechanisms
- Door opening techniques

Practical sessions as well as demonstrations will also be held throughout the 2 days.

Those attending the course will also take away with them a fantastic 90 page full colour MPL ID and opening manual (laminated pages in a presentation folder) containing detailed photos of different lock cases including internal mechanisms.

Safe Course

A 2 day residential course dealing with domestic and light to medium commercial safes, covering:-

- Introduction to start at common level of knowledge.
- Overview of safe construction, locking methods and opening techniques, including wording of invoice to cover work completed.
- Drill technology including sharpening, Drill rigs type and use.
- Hardplate penetration and lock manipulation methods through drilled hole.
- Relocking devices in detail- pitfalls and rectification.
- Safe repairs following opening by penetration.
- Safe repairs and maintenance as a result of user problems excluding lock-out.
- Alter combination & cut new keys.
- Final assembly adjustments, test & hand safe back to customer.

All subjects covered will be by taught by lecture and demonstration. In the case of safe opening, students will examine safes in open state followed by practical opening of

a randomly selected safe in teams of two by drill and tool manipulation, a case of a lock-out due to relocker activated will be demonstrated.

Access Control Course

It has become increasingly important for locksmiths to be able to offer a diverse range of services. With security having an ever increasing profile now is the time to learn a new skill.

This two-day residential course will be aimed at Advanced Student & above who are new to electricity and those who wish to increase their knowledge of this very important subject.

This course covers: -

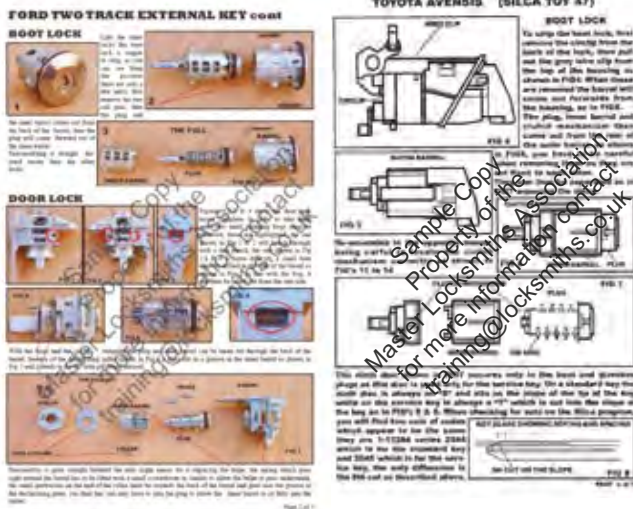

- Health & Safety in relation to Electrical Access Control
- Installation and Best Practice
- Theory of Electricity
- Product Choice
- Specification

In addition to the above items there is a hands-on workshops dealing with the practical installation of 3 different types of access control system, in order to get you confident in this field.

Auto Locksmithing detailed notes

Automotive security is becoming ever more complex, and as such the art of auto locksmithing itself is becoming more specialised with the need for modern equipment and constantly updated know-how. The MLA offers some detailed notes on locks for some of the most popular vehicles.

A bit of advice on locksmith training

Some training outfits are very bold with their statements that taking their short course will enable them to become fully trained locksmiths earning £50k + per year, but this is surely very much the exception rather than the rule? The MLA believe it's vital that the learner spends a lot of time thinking carefully about wanting to become a locksmith and does as much homework as possible. There are parts of the country that are overcrowded with locksmiths (some of whom are working part time so not necessarily needing to "make a living" from locksmithing alone and thereby doing it at unrealistic rates), whilst there are other locations that aren't as populated with locksmiths. We believe it's vital that anybody wanting to become a locksmith does as much research as possible; looking at where they'll be operating, what sort of services are required there, what the competition is like, where the gaps are in the market, what realistic set up costs are and how this compares to realistic earning potential etc. Locksmithing can be a very fulfilling and rewarding career, but it is that; a career, not a short term money making scheme. We recommend that those wanting to join the industry do it the right way, seeing it as a longer term investment, wanting to learn the right way, from the right people/organisations (we'd recommend anyone interested in learning to be a locksmith gets as many references as possible for training providers for example, where possible talk to the providers and those who've taken courses, even visit to see what the facilities are like. There's a lot of good training out there, but unfortunately a lot of very poor training too so choose wisely!)

Other Training

Other training courses are available to MLA members such as Electrical Safety (connecting to a fused spur), Abrasive Wheels, Marketing, Website effectiveness to name but a few, and we are working with our affiliate members to provide further courses in the near future.

Training is run at a regional level as well as at head office and of course at MLA Expo

The MLA sees training as a never ending activity for locksmiths, irrespective of how experienced they may be, and to promote this the association has its Continued Professional Development (CPD) scheme whereby members record the training undertaken.

Intermediate Apprenticeship in Locksmithing

The Intermediate Apprenticeship for Locksmiths is up and running.....

As you may be aware a framework has been developed for the locksmiths industry; the first ever Level 2 Locksmith Apprenticeship. The apprenticeship will be delivered through Skills for Security; with the awarding organisation HABC. This Level 2 apprenticeship has been designed with support from employers and trade bodies, in particular the MLA.

The first intake of apprentices have now completed both the 5 day general course and the 2 day opening course, and a 2nd intake have completed the 5 day general course. The opening course for the 2nd intake is due imminently (at the time of writing) and a 3rd intake will be starting shortly.

A member of Skills for Security visited the apprentices half way through the 5 day course and received great feedback from both tutors and learners. Steffan George of the MLA informed Skills for Security that he is very happy with the way the programme is running and how the learners are conducting themselves. Steffan has said that the learners have undertaken some additional training at a higher level and was very impressed with the overall outcome.

Christian Sprenger, Managing Director of HABC commented:

'Following the introduction of new standards by Skills for Security, HABC were instrumental in the development of the Apprenticeship in Locksmithing with the aim of offering a recognised standard for the industry. We're also delighted to now be working in partnership with the Master Locksmith Association to offer the HABC Level 2 Certificate in Locksmithing (QCF).'

This Apprenticeship programme is designed to equip apprentices with the skills required to work in the Locksmiths sector; it's an ideal way to lead into, or enhance a career.

The learner must achieve 41 credits to complete the Level 2 Certificate in Locksmithing; this will be combined with on

and off the job training over a minimum of a 12 month period. Learners will be required to complete a combined competency and technical qualification, functional skills and an ERR workbook.

On the job = Learning which encourages and enables the apprentice to demonstrate practical job-related skills and to practice and apply these skills in the context of the job. This type of learning will be delivered in the workplace and through practical experience of doing the job.

Off the job = Learning which encourages and enables the apprentice to develop the technical skills of the job and to develop their knowledge of theoretical concepts across a range of contexts and the wider market. This type of guided learning will be delivered away from the immediate pressures of the job. It may be delivered in the workplace, in a college or training provider premises.

Combined units (on and off the job)

Mandatory units

- Reducing the risks to health and safety at work
- Communicate effectively with others
- Conduct dynamic risk assessments during the locksmith activities
- Key System Design and Lock Assembly
- Cut and Provide Keys

Optional group A

- Prepare and maintain equipment and machines or
- Meet Customers' Needs for Locksmith Information and Advice, and
- Maintain security of customers keys and records during locksmith activities

Optional group B (any 2 of the following)

- Provide a complex quotation for security devices and door hardware
- Provide a simple quotation for security devices and door hardware
- Survey sites to collect information for the specification, installation and maintenance of security devices and door

hardware

- Diagnose and Rectify Faults on Security Devices and Door Hardware
- Open security devices to gain access to property and equipment
- Install Security Devices and Door Hardware

Functional skills (off the job)

Learners completing the apprenticeship will need to complete functional skills in English and Maths. The learner may be able to gain exemptions from this element if they hold functional skills at the required level or equivalent qualifications within the specific timeframes.

Employee Right and Responsibilities – ERR (on and off the job)

Employee Rights and Responsibilities must be covered and assessed as part of the Intermediate Level Apprenticeship in Locksmithing. Submission of the completed sign off sheet in the workbook as evidence of achievement must be provided before Skills for Security will issue a completion certificate.

Completion of this Intermediate programme supports learners in the Locksmiths sector to further their knowledge and skills giving an ideal platform to move on to more industry specific training and qualifications within the Locksmith sector.

Individuals completing the apprenticeship will be fully supported by Skills for Security to achieve their qualification. If you would like to take on an apprentice or you already have someone within your business that would benefit from completing the apprenticeship please contact the MLA or Skills for Security; we will be able to give you more details regarding the qualification and check whether you will qualify for funding.

MLA's Involvement With The Insurance Industry Continues At Pace

MLA's involvement with the insurance industry continues at pace

The MLA has for a while now been working closely with insurance companies, providing training seminars on the various lock related standards that exist and working with surveyors to help them understand what they should be specifying in order to help minimise risks etc.

Documents (for example the one shown to the right) have been provided to insurers during these seminars and have proven to be excellent guides, and very popular – with extra copies and electronic versions having been demanded after the presentations.

There were however 2 main developments in 2014 in the work the MLA does with the insurance industry.

Firstly, MLA approved companies are working closely with one particular insurance broker to help them ensure their risks are minimised by performing security surveys on properties to ensure that the insurers minimum security requirements have been met, and were they have then providing a certificate to confirm this. Only with this certificate will the theft and related areas of the insurance cover be valid.

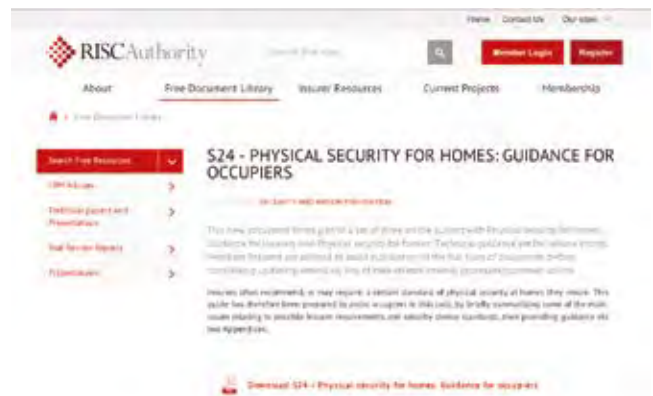

The other main development has been the generation of 3 documents by the RISC Authority, an annually funded research scheme supported by a significant group of UK insurers that conducts research in support of the development and dissemination of best practice on the protection of property and business.

We have for years had problems with members of the public ringing us saying their insurers require a BS3621 5 lever lock, but they've got a UPVC or composite door. A classic case of "computer says no". The insurance requirements were still based on wooden doors being the main. In order to address this, new insurance guidelines were required, and Richard Underwood, a senior security sur-

veyor at Aviva insurance, and member of RISC Authority took on the daunting prospect of producing them.

With the help of the MLA and various other entities, 3 documents have been produced.

- 1) Physical Security for Home: Guidance for Occupiers
- 2) Guidance for Insurance
- 3) Physical Security for Home: Technical Guidance

The first document (already available to download FOC at http://www.riscauthority.co.uk/free-document-library/search-free-resources_detail.s24-physical-security-for-homes-guidance-for-occupiers.html) is aimed at the occupier and providing generic security information and guidance.

The other 2 are specifically for insurers, one that will be available shortly as a free download, and the other, more technical one, available only to RISC Authority members.

The occupiers guidance document refers to the MLA in a number of sections and provides yet more great promotion not only for the association but importantly for MLA

members too.

The MLA is acknowledged at the beginning of the document for the support and assistance provided in the generation of the guide.

Acknowledgements

Most of the organisations mentioned within this document, and our thanks are accordingly extended to them. Particular thanks are extended to The Master Locksmiths Association (MLA), Door and Furniture Federation (DFF) and Secured by Design (SbD) who have also done to compare within the Area Agency Group (TAG), Urban and Axiom Ltd for the provision of many of the images.

This document has been developed through the DFC Authority and published by the Fire Protection Association (FPA). DFC Authority members recognise a special debt to ensure that they actively support a number of expert working groups comprising and comprising best practice for the protection of special projects in shops and the information that they supply to the end user. The handbook applies to the FPA document has been provided by the Technical Directorate of the FPA, private companies, and experts from the fire protection industry who together in the Fire Protection Association Working Group, although successful they require input from the end user. It is not intended to represent a definitive perspective, however, it is intended to provide a guide to the user. It is not intended to represent a definitive perspective, however, it is intended to provide a guide to the user. It is not intended to represent a definitive perspective, however, it is intended to provide a guide to the user.

Correct fitting of the appropriate security devices is of course paramount. You can have a very good quality and high security lock, but if it's not fitted correctly then the security it provides can be seriously adversely affected.

Get your security installed by a professional – use an MLA licensed locksmith!

The document gives the MLA as a good source of useful information. Of course there's plenty of excellent security advice on our website too!

It's great to see the use of the MLA Approved Company logo and mention of MLA members when the document talks about competent locksmiths.

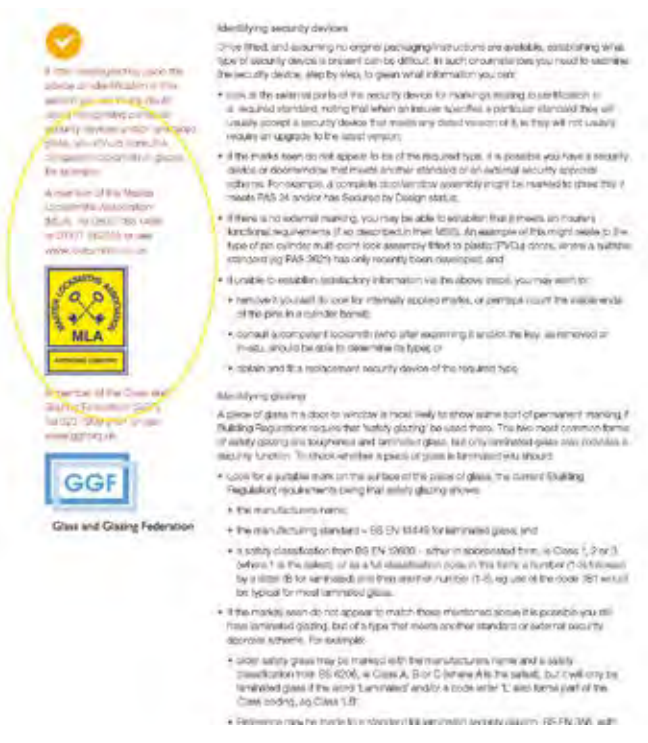

Security isn't something for DIY, rather DIFM (do it for me)!

Expert locksmiths will be able to specify, supply and fit the correct security devices.

Of course MLA Approved Company members have met the "Vetted, Inspected and Qualified" criteria that enables them to use the MLA logo with pride.

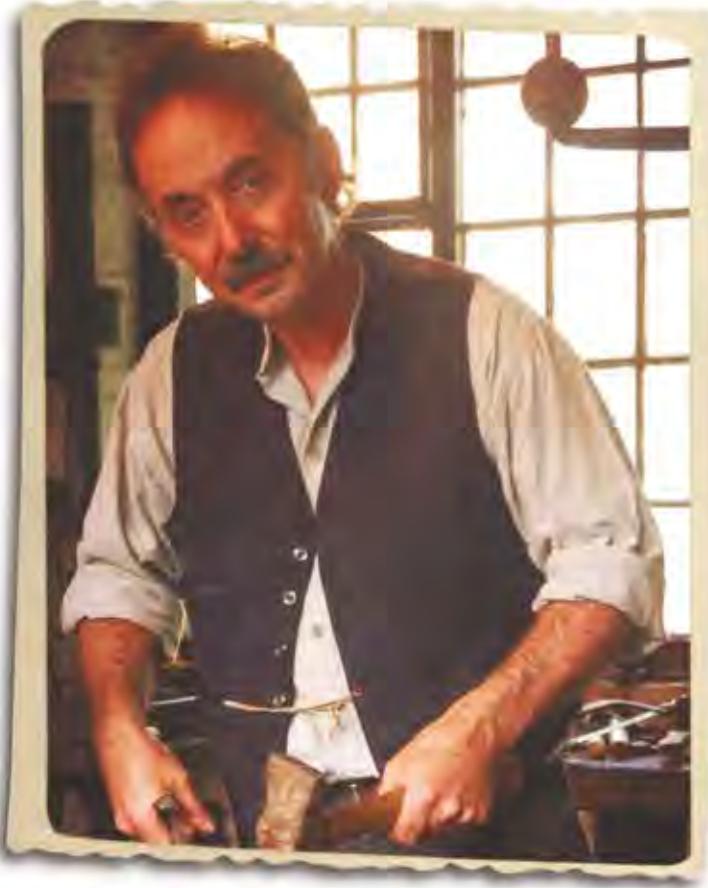

The MLA even appears in the summary of key points, where the document outlines that trade associations such as the MLA can be an excellent source of information.

Don't forget, we regularly provide useful technical seminars to police and neighbourhood & home watch network groups.

the Locksmith's House

Part of The Black Country Living Museum, The Locksmith's House in Willenhall celebrates the efforts of the small family-run lock making businesses which thrived over a century ago.

Working from the back yards of their own houses, hundreds of small family businesses evolved. A visit to the Locksmith's House demonstrates how such a business operated alongside family life and our lock display gallery offers an insight into some extraordinary locks from across the ages.

**Open for pre-booked Group and School visits only.

ERA Securing Britain's homes since 1838

ERA is a home grown British success story.

We've been designing and manufacturing door and window hardware in Willenhall, in the heart of the West Midlands, for over 175 years. With all that knowledge and experience built into our innovative products, it's no wonder ERA is the expert's choice for high quality, reliable security solutions.

For product information, advice and training, call the ERA Expert helpline on **01922 400050** or email us at **help@eraexpert.com**.

MLA EXPO - The Industry's Main Trade Show Is Back In 2015

MLA EXPO 15 SPONSORED BY
MASTER LOCKSMITHS ASSOCIATION
October 2nd - 3rd - 4th - The International Centre - Telford
ERA

Sponsored by component supplier of the year ERA, MLA Expo will be held at the Telford International Centre between the 2 – 4 October 2015. This is the 17th MLA Expo and is the largest locksmith and security exhibition in the UK attracting thousands of locksmiths and security engineers across the three-day event.

Commenting on the sponsorship, ERA's group marketing director Will Butler is confident that this support is the perfect fit with the ERA business. Will says: "the MLA Expo perfectly complements our intent to really provide support to the local locksmith not just through the sponsorship of this event but by kick-starting an installer scheme with MLA members. There's no better place to meet and talk through the key features and benefits of the scheme than at the industry event.

"2015 will be an incredibly exciting year for ERA as we develop a robust consumer campaign to drive home security enquiries to the locksmith. There will be generations of locksmiths out there that have been fitting ERA as far back as when the first lock was made in Willenhall in 1838. But in today's market it's our job to really understand the modern locksmith and develop security systems that help them broaden their services with ease and confidence."

Steffan George, director at the MLA is driving the MLA Expo event, he comments: "Without question we're delighted to secure headline sponsors for our event but what's particularly pleasing is that ERA's event support is just part of a broader campaign to support the locksmith industry – that's what our members need – tangible initiatives that drive homeowners to engage their services. We're delighted this partnership is off the ground. Exciting times ahead!" With stand sales for the 3000sqm hall standing at 80% sold

just under a year before the event it promises to be another fantastic exhibition

The Expo website has been revamped so that not only are details of previous shows now available (including details of who exhibited), but importantly more information on exhibitors is available.

The Exhibitors page has been transformed so that it has the logo for each company as the link to their own page on the site.

For more information, to find out who exhibited, then simply visit the dedicated Expo website www.locksmiths.co.uk/mla-expo

Fully Trained Engineers - Competitive rates

MLA's Modular Coaching/ BLI Exam continues to prove it's worth

As mentioned in previous handbooks, following the concern of the Training committee and the MLA Board members about there being a lot of very accomplished trading locksmiths who attend regional meetings, Expo, Wholesalers open days etc. yet are not Members of the MLA or BLI, maybe through fear of the exam, not knowing what's entailed in the exam etc. it was decided that in line with other institutions we would offer an alternative to the standard BLI exam. We would not only allow the exam to be taken in a modular fashion, thereby allowing people to take the elements they wanted, in the order they wanted and at the speed they felt comfortable with, but also introduced an some refresher coaching prior to each module, in order to help settle the candidates down and to point out exactly what the invigilator was looking for in a successful pass.

Having continued to run a number of these events, we're delighted to confirm that they seem to have really "hit the nail on the head", with a large take up and feedback from those doing it being particularly positive. The main use of it has been by those locksmiths who want to pass the exam in order to become an approved company member.

To re-cap; prior to each module the candidates are settled down with a cup of tea for an informal chat and refresher instructions/demonstrations and a lecture appertaining to the module in question with some hands on practice if applicable. A full demonstration of the key making is given and good and bad examples of the lock opening and lock fitting are shown.

After which each individual module is carried out under strict exam conditions.

Two modules are completed each day, and lunch is provided. Candidates can (and indeed in this instance did) choose to only take certain elements rather than all 4 if they so wish.

Those who have taken this route have felt that settling them down at the start and alleviating their nerves and knowing what we were looking for as a finished result were major factors in their success.

It has been particularly pleasing to see that a number of locksmiths have used this route to progress from personal/associated member up to approved company membership. The feedback has confirmed that it is the ideal way for experienced locksmiths, who just need a bit of "brushing up" on things, to take the exam so they can meet the qualified locksmith requirement for approved company membership.

So there you have it in a nut shell. If you have any doubts as to your ability to pass the exam, or concerns over what exactly is involved, then this might be the way forward for you. You can of course still sit the exam the old way if you wish but for just a few extra pounds this might be the way for you to go.

For details on how to take the exam in this fashion simply contact head office on 01327 262255 or e-mail training@locksmiths.co.uk

Air4 Remotes

*Air4 is a **versatile solution** for duplicating residential remote controls*

Suitable for barriers, gates & garage doors. Air4 allows you to duplicate with ease most remotes available on the market.

Neighbourhood & Home Watch

Another year has flown by. It gives me great pleasure to once again be able to contribute to the MLA handbook. I have previously made it very clear that I am a huge supporter of the MLA.

Last year I wrote about the production of half a million NHW stickers co-branded with the MLA. This year, I'd like to highlight the significance of 2015 for the Neighbourhood & Home Watch Network, as it will see us come to the end of our first 5 year business plan.

We have been consulting stakeholders, partners and members for many months in order to help us create our new one which will take us from 2015-2020. We held a National Collaborative Stakeholders Event in London on the 19th November with the aim of gathering key national partners and stakeholders.

This event comprised of a number of workshops - three main themes were identified that we wanted to get feedback on. These were the prevention of crime, the effective use of resources and stronger neighbourhoods. These themes helped to form the workshops during the event.

We were thrilled that the Master Locksmiths Association was represented at the event. We recognise the value of our

partnership with the MLA and were keen to ensure you had the opportunity to provide input as to what our main priorities for the next 5 years should be.

We also continue to promote the MLA's services on our national website (www.ourwatch.org.uk), which receives around 25,000 hits every month from NHW members, police staff and the general public.

Finally, I'd like to take this opportunity to wish all MLA members a prosperous 2015. I think it is essential that both of our organisations continue to maintain a close relationship through the implementation of our new business plan. After all, both of our organisations ultimately want to make communities safer.

Jim Maddan OBE
Chair, Neighbourhood & Home Watch Network

Introducing the latest performance high security padlocks from Mul-T-Lock The NE Series

MUL-T-LOCK®

www.mul-t-lockpadlocks.co.uk

Security related standards overview

At any given time there are approximately 30,000 standards within the UK and many more European standards being used covering a wide range of products and services. Standards are under constant review to make sure they are relevant and do not contradict each other. Standards provide the test criteria for independent test houses (such as Sold Secure) to accredit products and confirm they have been manufactured to a minimum requirement. The following overview is a breakdown of locksmith related standards (not exclusively) that people working within the industry should at least be aware of and ideally know what standards apply and when.

Standard Number

BS 3621 2007 + A2:2012

Title: Thief Resistant Lock Assembly. Key Egress

The original lock standard first drafted in the 1960's and still the base for all of the lock standards that are cross referenced in it. 3621 was intended for 5 lever mortice locks fitted to wooden doors and is intended to be used on domestic properties. The key-key application of this locking device makes it unsuitable for properties with single exits. The latest version was amended in 2012 to satisfy legal issues within the wording of the document. The UK was able to retain the following BS standards because of the GVA that was not included in BS EN 12209 and BS EN 1303 however BS 3621 was brought into line with 12209 and 1303 in 2004.

BS 8621 2007 + A2:2012

Title: Thief Resistant Lock Assembly. Keyless Egress

Introduced in 2004, 8621 has the same test criteria as 3621 but is intended for use on locking devices that require no key to achieve egress. Single exit and multiple occupancy dwellings require keyless egress as per fire regulations. The 2012 amendments were as per 3621.

BS 10621 2007 + A2:2012

Title: Thief Resistant Lock Assembly. Dual Mode

Introduced in 2007, 10621 also has the same test criteria as 3621 and is a hybrid of the two previous standards. 10621 locks should not be used in single exit dwellings because of the entrapment possibilities. Amendments made in 3621 and 8621 in 2012 are mirrored here.

BS EN 12209 2003

Title: Building Hardware- Locks and Latches- Mechanically Operated Locks, Latches and Locking Plates-Requirements and Test Methods

This European standard covers requirements and test methods for all types of mechanical lock or latch (including associated or separately supplied locking plates), intended for use on pedestrian doors in buildings but excludes electro-mechanically operated locks and striking plates, multi-point locks and their locking plates, locks for windows, padlocks, locks for safes, furniture locks and prison locks. This standard is in harmony with the *621 series of standards apart from the GVA that is unique to the UK.

BS EN 1303 2005

Title: Cylinders for Locks-Requirements and Test Methods

This European standard introduced in 2005 is for cylinders only. The test methods are in line with the *621 series of standards except for the GVA.

PAS 24 2012

Title: Enhanced Security Performance Requirements for Doorsets and Windows in the UK.

Adapted with input from Secure by Design, PAS 24 is intended to provide the minimum requirements for whole door sets in new build dwellings. PAS 24 takes into consideration all aspects of a door including fixings and hinges etc. The lock requirements cross reference to 3621, 8621 etc. PAS 24 was rewritten to include BS 7950 in 2012.

PAS 3621:2011

Title: Multipoint locking assemblies - Keyed egress

A family of standards that mirrors BS 3621 but for multipoint locks.

PAS 8621:2011

Title: Multipoint locking assemblies - Keyless egress

PAS 10621: 2011

Title: Multipoint locking assemblies - Dual mode egress

BS EN 1125:2008

Title: Building Hardware. Panic Exit Devices Operated by a Horizontal Bar, for use on Escape Routes. Requirements and Test Methods

Experience relating to escape from buildings and general safety have made it desirable that doors at exits in public buildings, places of entertainment, shops etc., should be fitted with panic devices operated by a horizontal bar. The emphasis for products covered by this standard is on safe exit rather than security.

BS EN 179: 2008

Title: Building Hardware. Emergency Exit Devices Operated by a Lever Handle or Push Pad, for use on Escape Routes. Requirements and Test Methods

This standard covers devices to be used in emergency situations where people are familiar with the emergency exit and its hardware and therefore a panic situation is most unlikely to develop. Lever handle operated escape mortice locks or push pads may therefore be used.

BS8607:2014

Mechanically operated push button locksets

Published in 2014 following information from Secured by Design that push button locksets were being used on some new build apartments. There are 4 levels of security that can be tested to and the highest level (4 or 4AL) is intended to confirm that a push button lockset is at least as secure as a BS 3621 lock.

BS EN 12320: 2012

Title: Building Hardware, Padlocks and Padlock Fittings.

This European standard specifies performance requirements and describes test methods for strength, security, functions and corrosion of padlocks and padlock fittings used in building applications, but excluding cables and chains.

Requirements which relate to security are classified in six grades, based on performance tests that simulate attack. This standard now contains an attack test with a limited tool list based on 3,5 and 10 minutes.

BS EN 14450:2005

Title: Secure storage units. Requirements, classification and methods of test for resistance to burglary. Secure safe cabinets

This European standard specifies performance requirements and describes test methods for strength and security functions of secure safe cabinets to S1 and S2.

BS EN 14846:2008

Building Hardware – Locks and Latches – Electromechanically Operated Locks and Striking Plates

BS EN 1627 – 1630: 2011

Pedestrian doorsets, windows, curtain walling, grilles and shutters. Burglar resistance.

Sold Secure

Sold Secure is an independent test house that has its own test specifications based on the standards listed (sometimes using several standards in one specification). Sold Secure has 40+ specifications that are constantly reviewed by industry stakeholders and is recognised by Police groups (ACPO), Insurers and other test houses. Some of the locksmith related specifications include:

SS 301: 2008– Specification for Mechanical Security Systems for Domestic Buildings

SS 303: 2013 – Specification for high Security Padlocks

SS 304: 2008– Specification for Domestic Safes

SS 306: 2008 – Specification for Mechanical, Domestic Door and Window Security Systems

SS 308: 2008 – Specification for Mechanical, Commercial Doors and Window Security Systems

SS 312: 2014– Specification for Cylinders for Locks

A revised Diamond level that tests cylinders against snapping. Secure by Design recommend SS 312 Diamond cylinders. SS 312 is a stand alone cylinder test that improves security just by changing the cylinder.

SS 314: 2009 – Specification for Security Cabinets

DHF Technical specifications**TS 003: 2012**

Title: Door chains and limiters

Published in 2012 this specification gives a simple pass/ fail test for loads on door chains and restrictors. It replaces a very complicated test specification that was very costly to achieve and therefore manufacturers chose not to use it. The rewrite happened in late 2012 and product should begin to be tested to it in the near future.

TS 007: 2014

Title: Enhanced security performance requirements for replacement cylinders and or associated security furniture

A DHF technical specification that tests for security of cylinders or a combination of security handles and cylinders together. A star rated system that needs three stars for the minimum requirement can be achieved with either a three star rated cylinder or a one star rated cylinder and two star rated handle.

TS 008: 2012

Title: Enhanced security and general requirements for letter plate assemblies and slide through boxes

A totally new test specification that does not replace an existing specification. This specification provides a means of evaluation against opportunistic attack and employs human intervention testing.

TS 009: 2012

Title: Enhanced security and general requirements for letter box assemblies that are free standing or surface mounted and where mail is retrieved from the same side as delivery

This is also a new test specification that provides a means of evaluation against opportunistic attack to try and prevent the contents/ letter box being removed and assess the product against potential arson attack.

TS 621 2011

Title: Thief Resistant Electromechanically Operated Lock Assemblies

A technical specification that describes performance requirements for single or multipoint thief resistant electromechanical lock assemblies including the lock interface, striking plate, fixing screws, fitting instructions and where appropriate, cylinders and protective furniture.

Other standards used for reference

BS 5357. Code of practice for installation of security glazing

BS 5544. Specification for anti-bandit glazing (glazing resistant to manual attack)

BS 6206. Specification for impact performance requirements for flat safety glass and safety plastics for use in buildings

BS 6262 Part 4 Glazing in buildings – Safety related to human impact.

BS 7950. Specification for enhanced security performance of casement and tilt/turn windows for domestic applications (now included in PAS 24 for the UK).

BS 8213-4 Windows, doors and roof lights Part 4. Code of practice for the installation of replacement windows and doorsets in dwellings

BS 8220-1 Guide for security of buildings against crime – Part 1. Dwellings

BS EN 1906 Building hardware – Lever handles and knob furniture – Requirements and test methods

BS EN 1935 Building hardware- Single-axis hinges – Requirements and test methods

BS EN 13724 Postal services – Apertures of private letter plates – Requirements and test methods

Locksmith related standards in development (titles and numbers to be confirmed)

MLA 2014 PR Review

2014 was another highly successful year for the MLA and its far-reaching PR campaign. We significantly ramped up promotion for our members and have continued to convey the benefits of using MLA members to the general public and business audiences.

Our PR team generated coverage on behalf of association members worth more than £197,000, reaching over 4.3 million people around the country.

Regular activity included reaching homeowners through advice columns and press releases aimed at the national consumer press and key regional newspapers. Advisory articles were featured in national consumer publications such as The Times, The Independent and House Beautiful, as well as specialist national magazines such as Completion Magazine and Property Investor News.

Meanwhile, our regular security columns appeared in regional publications across the UK, as a result of the useful tips they gave consumers and our PR team's strong relationships with local journalists. The columns featured in all corners of the UK, including The Edinburgh Evening News, The Lincolnshire Echo, The Birmingham Post, The Manchester Evening News, The Newcastle Journal, The Southern Reporter and The Nottingham Post. In addition to providing security advice, the columns direct readers towards their local MLA members and the MLA website.

The MLA was also promoted across a wide range of industry sectors as part of our PR campaign, with articles and comments featuring in publications and websites representing residential property, facilities management, hospitality, leisure and more. Football and Stadium Management, Property Professional, Facilities Management Journal, The English Home and Hotel Owner were just some of the media outlets to carry advice and information from the MLA last year.

Our partnership with The Neighbourhood and Home Watch Network was continued for the second year in a row in 2014. We teamed up with the organisation once more to print and distribute half a million jointly branded stickers, which carried the MLA's website address and telephone number to homes across the UK.

We were also pleased to be able to support members that reached key business milestones this year, such as major anniversaries, by working with them to secure coverage in their local press.

This significant amount of PR is just one of the many benefits of being an MLA Approved Company, and something which we will continue to build on during 2015.

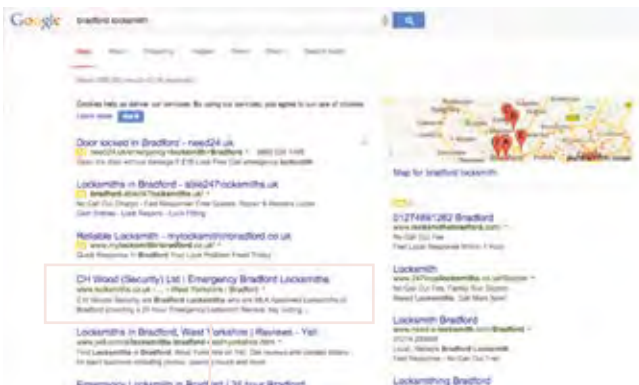

MLA's Online Presence Goes Into Overdrive

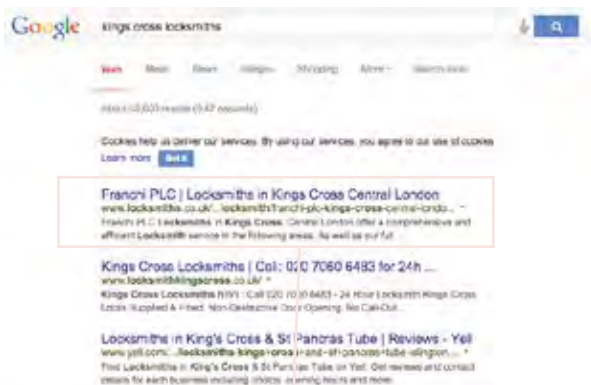

The recruitment of Chris Churchill as a permanent employee during 2014 helped take the MLA's website to the next level. MLA approved company members have seen their online presence increase and quality improve significantly, with a number of members MLA pages now ranking in the top 3 positions on Google.

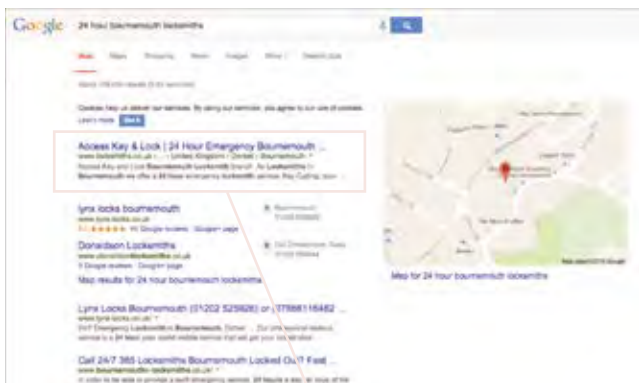

Members Pages Ranking 1st On Google

Ranking 1st for 'Bradford Locksmith'

Ranking 1st for 'Kings Cross Locksmiths'

Ranking 1st for '24 Hour Bournemouth Locksmiths'

The find a locksmith functionality has been added to the service pages, meaning when people search for a particular locksmith service (e.g. Auto, or Safes) then they can find a suitable MLA locksmith direct from that page.

Service Page With Find a Locksmith Functionality Now Added

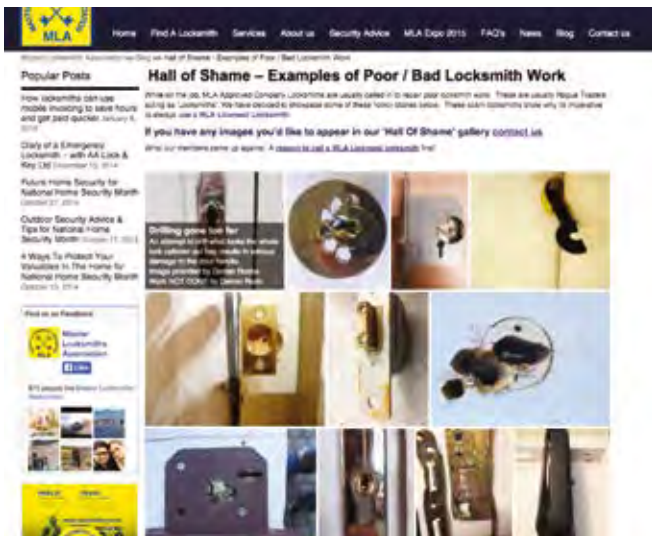

In addition to this content has continued to be added to provide users with useful security advice.

On the "find a locksmith" aspect, in order to minimise load time and therefore help address bounce rate, the system now works out where the search is being made from (when using a landline) and on the find a locksmith map only shows local members (when no search criteria are entered). Company logos have continued to be added to help with company branding and help each company stand out in the list below the map.

To provide members with even more promotion the "Interview with a Locksmith" feature has continued and we've added other features to our blog such as "a day in the life of" etc. This has proved very popular and we look forward to covering all our approved companies with this in the future.

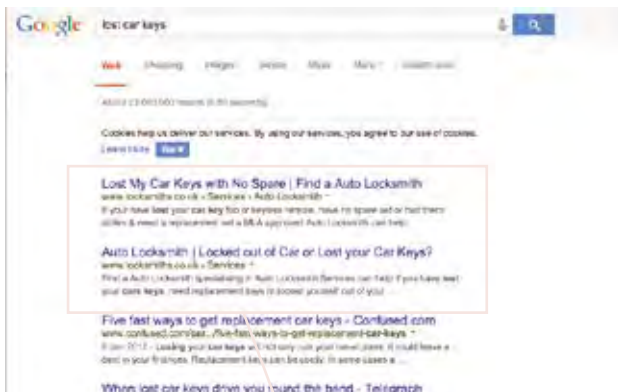

The “hall of shame” continues to prove immensely popular, where jobs that locksmiths have come across that aren’t quite what they should be are shown. Yet more reasons to make sure you choose a local, vetted, inspected and qualified locksmith!

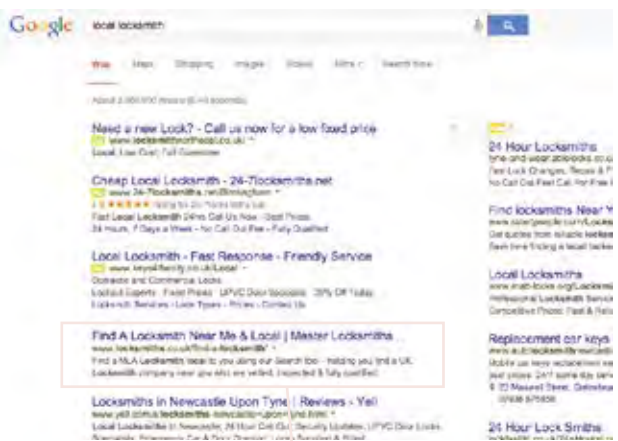

Ranking 1st On Google For Popular Locksmith Related Searches

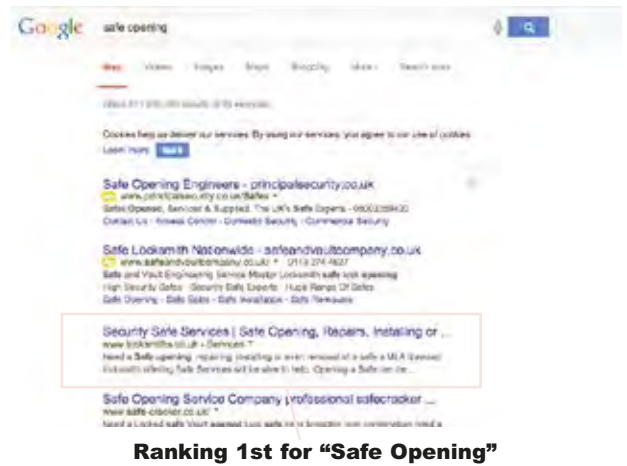

The site continues to improve its ranking for certain topics whilst maintaining its particularly highly search rankings for numerous terms such as....

Ranking 1st & 2nd for “Lost Car Keys”

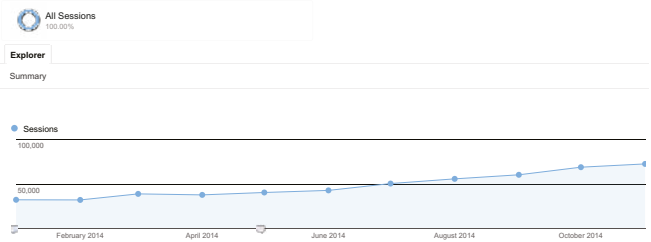

Ranking 1st for “Local Locksmith”

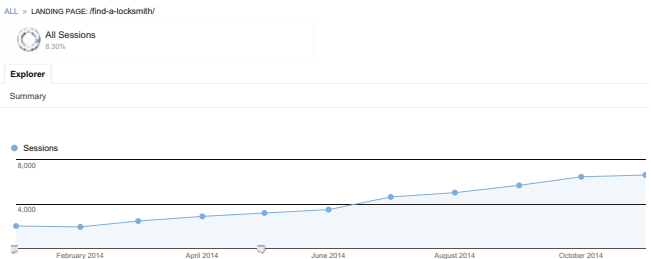

Ranking 1st for “Safe Opening”

The work on the site has been so successful that overall hits on the site are double what they were 12 months ago for unique visitors. This increase rises to over 200% for the find a locksmith page, and we’re delighted to see members pages as a whole getting 20,000 visits per month.

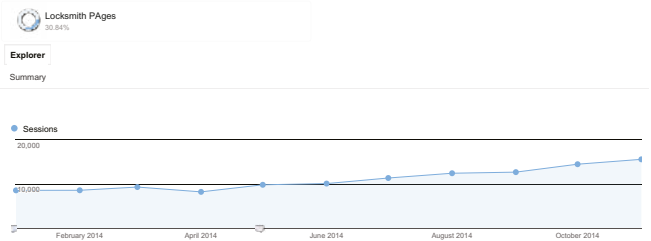

Overall Website Increase of 100%

Find a Locksmith Page 200% Increase

Members Pages 100% Increase

Things never stand still for long though when it comes to SEO and the digital promotion side of things, and we’re delighted to say that 2015 will see plenty more work being done on behalf of members. The main aspect being the development and launch of a new mobile specific site where the find a locksmith functionality will be optimised and made easier to use by those viewing the site on a mobile device.

Chubb Award & Nigel Rose Bowl 2014

MLA Awards

The MLA's Annual Banquet was once again held at the Western Region, this time taking place in Basingstoke. An excellent event as usual; it included a full schedule of training, a small exhibition area, the renowned and hard fought lock picking contest (well done to Mete Hilmi for winning that!) as well as the MLA's national AGM on the Sunday

At the Saturday evening meal the MLA's 2 prestigious prizes were awarded.

Firstly the Chubb Award, Sponsored by Mul-T-Lock UK. This most prestigious and well recognised award within the industry, is bestowed by the board of directors of the MLA on the person they feel has done the most to further the locksmithing profession in the previous year. The recipient in 2014 was Lewis Beadle, a man who not only serves as a current lock tester, but who has also spent time on the board of directors and served a tester for Sold Secure.

The photo below shows the award being presented to Lewis by Dion McAllister, Mul-T-Lock Vice President Export West Europe.

Then there was the Nigel Rose Bowl.

This award is for the person with the highest marks in the BLI exam. This year saw Andy Kennedy win the coveted prize.

As Nigel unfortunately couldn't make the event the actual presentation itself took place at the Northern Region meeting later in the year. The photo below shows the award being handed over to the well deserving Andy by Nigel Rose of Nigel Rose Marketing Services.

Congratulations to them both from all of us at the MLA.

Licensing the Professional Locksmith

The Master Locksmiths Association (MLA) is the leading Trade Association for the locksmithing industry.

In the absence of Government based licensing (meaning that anyone can call themselves a locksmith), the MLA can provide you with peace of mind through it's licensing scheme.

MLA licensed locksmith companies, who undergo strict vetting (including criminal record checks, regular inspections to ensure quality etc), are able to provide advice based on knowledge and experience, recommend products that are fit for purpose as well as provide professional installation and maintenance services.

The key to your security needs.

Find your nearest MLA approved locksmith by contacting the Association:

Tel: **0800 783 1498** · Fax: **01327 262539**

Web: **www.locksmiths.co.uk**

E-mail: **enquiries@locksmiths.co.uk**

The benefits of using an MLA licensed locksmith

- Leading Trade Association for the locksmithing industry
 - Not-for-profit organisation
 - Established over 50 years ago
 - Nationwide Membership
 - Promotes standards of conduct, practice and materials within locksmithing
 - Provides peace of mind to the end customer through it's licensing scheme, in the absence of Government based licensing
 - Following a change to the law on the vetting of locksmiths implemented thanks to a campaign by the MLA, the only way for locksmiths to get standard Criminal Record disclosures is via Master Locksmiths Association membership
 - Various discounts available from participating MLA members (see website homepage for more information)
 - Standards are kept high by employment of qualified locksmiths, strict vetting and regular inspections. Training is also provided by the Association to ensure members are constantly up to date with the latest industry developments
 - Recognised as the authoritative body for locksmithing by:
 - Police
 - Home Office
 - British Standards Institute (BSI)
 - RISC Authority (formerly IPCRes, the UK property insurers' technical group)
 - Building Research Establishment (BRE)
 - MLA licensed locksmith companies are able to provide:
 - Advice based on knowledge and experience
 - Recommend products that are fit for purpose
 - Provide professional installation and maintenance services
 - A pricing policy to ensure fair and transparent prices are quoted before work commences
 - Channels of arbitration exist to fully investigate any complaints or disputes, should they arise, and the MLA advises or takes any necessary action depending on the outcome
 - Look out for the MLA Approved Company Logo
- Visit www.locksmiths.co.uk or call **0800 783 1498** to find out the details of your nearest MLA licensed locksmith.

Sold Secure, one of the leading suppliers of test and certification services for security related products, is delighted to sponsor this leaflet. Working with companies world-wide, we assess products to see whether strict performance criteria are met and where applicable allow the use of the coveted Sold Secure approved logo. When choosing your security products be sure to ask your MLA licensed locksmith if there is a Sold Secure approved product suitable for your particular needs.

MLA Guidelines for minimum security for domestic property

I. ACKNOWLEDGEMENTS

The Master Locksmiths Association is grateful to the following organisations for their support and assistance in drawing up these guidelines:

- Association of Chief Police Officers (ACPO) (Project & Design Group-Technical Committee).
- British Hardware Federation
- Builders' Merchants Federation (BMF)
- Chief Fire Officers Association (CFOA)
- Door and Hardware Federation (incorporating Door and Shutter Manufacturer's Association and Association of Building Hardware Manufacturers).
- Glass and Glazing Federation (GGF)
- Guild of Architectural Ironmongers (GAI)
- Home Office Scientific Development Branch (HOSDB)
- RISC Authority (UK insurers technical advice body)
- Lloyds
- Sold Secure (part of MLA Group)

Note: These Guidelines give a general description of security for domestic buildings. Neither the guidelines nor the list guarantees that these methods are suitable for specific applications. It is the responsibility of the equipment supplier and/or equipment purchaser to ensure that any system is suitable for its particular application and that it complies with all legislation, standards, codes of practice or any other requirement.

Every effort has been made to ensure the contents of these Guidelines are accurate, however the Master Locksmiths Association does not accept any responsibility for loss arising from decisions based upon them.

I. INTRODUCTION

Theft from domestic property causes major problems for the Insurance industry and for specifiers of security products who might not be familiar with the industries involved. The reasons for these guidelines are:

- the Insurers possible requirement on a policy holder to maintain a minimum level of security to protect their premises, to use it when the premises are unattended or in part when they are occupied.
- the general obligation of householders to take reasonable security precautions for their own good.
- to provide easily understood information for the use of those not familiar with the Security or Insurance industries.

These guidelines are not intended to be applied to new construction or major refurbishment. For these applications British Standards BS 7950:1997 with Amendment 3, Specification for enhanced security performance of casement and tilt/turn windows for domestic applications and PAS 24:2012 Enhanced security performance requirements for doorsets and windows in the UK (the latest version of PAS 24 includes the requirements of BS 7950) apply. These specifications are based on complete doorsets and window assemblies i.e. the door or window, including frame, hinges, locks, and fixings as a whole unit. The specifier is recommended to obtain doors and windows certified to these specifications.

Further guidance is given in BS 8220-1: Guide for security of buildings against crime – Part 1:2000 - Dwellings

Currently European specifications EN 1627-1630 also exist for the security of doors, windows and shutters. Products certified to the appropriate grades of these specifications are equally suitable.

These Guidelines assume that occupants are all able bodied. For users with disabilities, seek professional guidance before any installation.

Every attempt is made in these guidelines to be as practical as possible with recommendation or the specification of products, but there will always be occasions where alternatives will need to be sought because of the nature of a particular design, size or other feature of a door or window to be secured. In these circumstances the advice of a specialist in this field should be taken. A member of the Trade Division of The Master Locksmiths Association (denoted as "MLA approved company" and accompanied by the MLA registration number) should be contacted for such advice which should then be checked with the Insurers where applicable.

To comply with the requirements of most Insurers for thief resistant lock assemblies that necessitate the use of a key for egress, it is generally accepted that locks used on traditional external timber doors are certified to BS 3621:2007+A2:2012 Thief resistant lock assemblies – Key Egress. This indicates that the lock is part of an on-going test and audit programme to show it meets the requirements.

The MLA recommends that locks conforming to the latest version of any standard are to be used, however the MLA also recognises that insurers will on occasion accept locks, already installed that conform to earlier versions.

Where there is a requirement for means of escape (from fire) from the inside without the use of a key while maintaining security from the outside, lock assemblies to BS 8621:2007+A2:2012 Thief resistant lock assemblies – Keyless Egress should be installed.

Certifying to BS 8621 commenced in April 2005 and lock assemblies certified as complying with this Standard are listed within the links in Appendix C.

The introduction of new materials (e.g. Aluminium, PVC-U and Composite Materials) and designs used in the construction of doors and windows can make single point locking inadequate. The locks designed for these types of door are usually multi-point and therefore cannot be tested to BS 3621, BS 8621 or BS 10621. PAS 3621, PAS 8621 and PAS 10621. Locks produced prior to this date should have a minimum of three locking points and use a cylinder that meets the minimum requirement stated in 3 (b).

Nothing in this document or related documents shall imply that the installation of any security device will prevent unauthorised entry to a premise or that by following these guidelines insurers are obliged to issue insurance cover.

2. GENERAL CONSIDERATIONS

When considering the matter of minimum security requirements and the interpretation of these guidelines, users of these guidelines should be mindful of a number of factors:

(a) The adequacy of the door or window, frame thickness and the material quality together with the fixings of the frames to the surrounding structure might impact on the level of security provided.

(b) A degree of flexibility when imposing security requirements might, on occasions be necessary. Often, due to the nature of the door or window construction, or the material from which it is constructed, it might require the use of locks or locking devices in situations other than that for which they were intended. In such circumstances the advice of a Trade member of the Master Locksmiths Association should be sought, and written confirmation of their proposals obtained from any interested insurer.

(c) If improvements are required to the security of aluminium, PVC-U or composite material doors or windows it is stressed that this work should be undertaken by professionals. Again advice must be sought from an Approved Company Member of the Master Locksmiths Association who has experience in this type of work. Care should be taken not to breach manufacturers' warranties that might still apply.

(d) It must also be appreciated that some locks not certified to BS 3621 have in the past and could in the future be accepted by Insurers. Where this is the case, written confirmation by the Insurers of their acceptance of the product for its intended use should be obtained by the end-user. This recommendation also applies with the introduction of lock assemblies under BS 8621 and BS 10621.

(e) Insurers and specifiers should be mindful of possible conflict between occupier safety and security when the property is occupied. Careful consideration must be given to the means of escape in the event of fire before specifying that locks should be engaged and the keys removed (using

BS 3621:2007+A2 :2012 specification) before retiring for the night. Keys should be kept within easy reach of the occupant, but out of reach of an intruder.

If in doubt, consult any interested insurer and the local Fire Prevention Officer for guidance.

(f) External doors that are deemed to be used as an exit in case of an emergency should be locked in the manner specified for the final exit door, with the addition of a nightlatch that can be opened from the inside without the use of a key for use when the property is occupied. Where locks to BS 8621:2007+A2 :2012 are fitted, egress will be facilitated from the inside by the presence of the thumb turn.

(g) In blocks of flats and other buildings of multiple occupancy, the means of escape in the event of fire is an important consideration, particularly where the entrance door to the individual flat is the only means of escape. The use of Escape Locks that can be opened from the inside by a single action without the use of a key (but still retain their security from outside as described in BS 8621) is acceptable to Insurers subject to written confirmation. This type of lock will normally meet the requirements of the Building Regulations.

(h) New products may become available that conform to test procedures for security products, and carry the appropriate certification mark. When these are accepted by the organisations supporting these guidelines, and where suitable for the protection of a particular risk, their use should be encouraged.

(i) When making recommendations for the fitting of security items, consideration must be given to the type of risk involved relevant to the location of the premises. It will be necessary to increase the number of locks and fittings to doors and windows in high-risk areas. Advice should be sought from the local Crime Prevention Design Adviser, Architectural Liaison Officer, any interested insurer involved or an Approved Company Member of the Master Locksmiths Association.

(j) A list of Approved Company Members of the Master Locksmiths Association, recognisable by the logo "MLA Approved Company" is available from the Master Locksmiths Association. This list is also reproduced and updated on our website www.locksmiths.co.uk

3. MINIMUM SECURITY REQUIREMENTS

(a) Locks currently available certified to British Standard BS 3621, BS 8621 or BS 10621 should bear the standard number and the mark of the certification agency. These are listed in the web links in Appendix C. Such locks may be available in rim or mortice fixing. Locks for PVC-U and composite doors (when multi-point) should meet the minimum requirement set out in PAS 3621, PAS 8621 and PAS 10621 published in 2011. Locks produced prior to this date should have at least three locking points and be

combined with a cylinder that meets the requirements of 3(b). Locks that have been part of a PAS 24 door test are also acceptable. Written agreement for the acceptance of such locks should be obtained from the insurer by the policyholder.

(b) Lock cylinders installed before the implementation of these guidelines (November 1999) should have a minimum of five pins and an anti-drill insert. Thereafter, as a minimum requirement the cylinder shall meet the requirements of BS EN 1303:1998 Clause 6.7 Security Grade 4 (Table 10) or BS EN 1303:2005. Clause 6.8 Key related security Grade 5 (Table 9) and Clause 6.9 Attack resistance Grade 2 (Table 10). Technical specifications SS 312 and TS 007 were published in 2010 and 2011 and are to be used when doors are at risk of cylinder attack and may be a requirement by some authorities. Cylinders that are Sold Secure Diamond rated have been subject to an extensive attack test and offer a significant security upgrade to any door that requires a Euro cylinder. The Master Locksmiths Association recommends that for retro fit security upgrades, SS312 Diamond cylinders should be used as a cylinder change only solution or a TS 007 one star rated cylinder combined with a two star rated handle or a TS 007 three star rated cylinder (either TS 007 solution must achieve a total of three stars to be effective against attack).

(c) Where any cylinder operated lock is used, the outside cylinder shall not protrude more than 3 mm from the face of the door or the lock furniture (handle plate or cylinder rose) where fitted. Lock furniture should be of the 'bolt through' type with the fixings being secured from the internal side only. Lock furniture should comply with BS EN 1906 Lever handles and knob furniture – Requirements and test methods – Annex A: Requirements for security lock furniture for use on burglary resistant doors – Grade 1 unless certified as a component of a door assembly satisfactorily tested to PAS 24. Lock furniture may consist of separate components of lever/knob handles on roses and cylinder roses or composite backplates. Where cylinder roses are fitted, these must provide the cylinder protection as required under BS 3621, BS 8621 or BS 10621.

(d) A limited range of other door locks, and most types of lockable bolt or window locks, are likely to be acceptable to insurers for the purpose of securing doors and windows. A proposed (to be issued in 2013) guidance document on Minimum Security Standards for Domestic Properties will provide full details. This will be available for download from www.riscauthority.co.uk

4. HINGED DOOR SECURITY

The type of lock and the position to which it is fitted on the door is dictated by the design of the door. It is therefore not possible to make specific recommendations regarding the fixing positions of additional security devices, as this will be determined by the position of the original fittings on the door. The height at which the lock is fitted might also be determined by the level at which the user is standing when

locking or unlocking the door, e.g. one or two steps below the door entry level.

For specific guidance reference should be made to BS 8220 Guide for security of buildings against crime – Part 1:200 Dwellings. However, the following is offered as a general guide:

4.1 Additional Mortice Deadlocks

Where the lock to be fitted is of the mortice type, the minimum thickness of the door to which it is being fitted must be 44 mm. The lock should be fitted approximately midway between the existing lock and the top or bottom of the door depending on which has the greatest unsecured distance, avoiding any cross rail or glazing bar joints.

4.2 Additional Mortice or Rim Security Bolts (Single Doors)

To be fitted horizontally (where possible) approximately midway between the top lock and the top of the door and the bottom lock and the bottom of the door.

Where a single lock conforming to the requirements of the insurance company is fitted, the additional bolts should be fitted approximately midway between it and the top and the bottom of the door.

Where bolts are fitted vertically they should be between 50 mm and 100 mm from the edge of the door, avoiding any joints.

For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts. Where doors do not form part of an escape route, loose key mortice bolts are suitable

4.3 Additional Mortice or Rim Security Bolts (Double Doors)

To be fitted vertically to the top and bottom of the doors between 50 mm and 100 mm from the front of the rebated edge of the door, avoiding any joints. It could be necessary to fit security bolts to the top and bottom of the first closing leaf only, if the doors are of substantial construction.

For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts on the first opening leaf, the first closing leaf being secured by loose key bolts. Where doors do not form part of an escape route loose key mortice bolts are suitable for both leaves.

4.4 Hinge Bolts and Security Hinges

Hinge bolts shall be fitted to all outward opening doors at a position of approximately a quarter of the door height from the top and bottom of the door, but not within 150 mm of the top or bottom hinges.

Hinges for use on burglar-resistant doors should comply with BS EN 1935:2002 Annex C. These may comprise either such a design that the hinge pin can only be removed when

the door is open, or alternatively, suitable composite security hinges incorporating hinge bolts within the hinge flap that enable the hinge to withstand shear loads should be considered.

4.5 Letter plates

Letter plates should be located with the aperture at least 400 mm away from any locks to stop access to the locking system through the aperture. The letter plate aperture should be in accordance with the requirements of BS EN 13724: Postal services- Apertures of private letter boxes and letter plates – Requirements and test methods Type 4 size 2 - 230 – 280 mm wide x 30 – 40 mm high. If these criteria cannot be achieved, additional measures might be needed to prevent access to door locks through the letter plate, such as the addition of internal security flaps or letter cages/internal postal boxes. Letter plates should be fitted horizontally at a height between 700 mm and 1700 mm measured from delivery floor level

Where the sole means of internally locking a door is hand (not key) operated, then it is recommended that the letter plate be omitted from the door. In this instance, alternative means for mail delivery shall be provided such as an external postal box complying with types 1, 2 or 3 of BS EN 13724:2002, in which case the aperture size will vary according to the dimensions of the postal box.

4.6 Stable Doors

Both halves of stable doors must be treated as separate doors.

5. WINDOW LOCKS

Where windows are not required to be opened, they may be screwed permanently shut. Security screws shall be used where this is to be done from the outside, and the heads countersunk and plugged.

The security of all ground floor and all accessible windows which are not considered as means of escape (e.g. from a flat roof) shall be considered. Openable windows that are over 600 mm high or wide should be fitted with a multi-point locking system or two window locks with removable keys. Sashes less than 600 mm need only be fitted with a single lock.

Where a lock is to be fitted to a window care must be taken to ensure that the material to which the lock is fitted does not become weakened by fitting it too close to existing fittings.

Where a window is required for emergency egress then it shall not be fitted with any type of key lockable system. In this instance the window should be fitted with laminated glass.

5.1 Louvre windows

Urgent consideration should be given to replacing louvre windows as it is difficult to achieve adequate security. If this

is not possible, then all panes of glass (in louvre windows) should be securely fixed, with suitable adhesive, into their brackets or suitable grilles, bars, or shutters fitted. Louvre windows should not be installed in vulnerable locations. The use of plastic frame materials is not acceptable for a security application

5.2 Casement Windows

Where the casement window opening exceeds 600 mm, two locks are required. For side-hung casement windows over 600 mm high the additional locks should be fitted approximately quarter of the height from the top and bottom of the casement window. For top-or bottom-hung fanlights in excess of 600 mm wide, the locks should be fitted approximately one quarter of the width of the opening fanlight from either side of the sash.

5.3 Tilt/Turn Windows

Additional locks should be fitted to the bottom rail at the leading edge for security and also to prevent the accidental opening of the window in the side hung mode.

5.4 Vertical Sliding Sash Windows

Where the window opening exceeds 600 mm, the locks should be fitted on the meeting rail of the bottom sash, at approximately one quarter of the width, or on the vertical frame either side of the upper sash, directly above the meeting rail of the bottom sash.

Where there is a requirement for ventilation when the premises are occupied, vertical sliding sash windows can be provided with restricting devices suitably placed to provide a ventilation position, to allow them to be opened a maximum of 100 mm and remain secure. This is not recommended when the premises are unoccupied. The window should then be secured in the fully closed position.

6. SLIDING DOORS AND WINDOWS

All sliding doors and windows should be fitted with anti-lift devices to prevent them being removed from their tracks. Care should be taken to ensure such devices are fitted appropriately so that they do not go inside the section of the frame when the door/window is closed. Some sliding door locks have an in-built facility to prevent the door being lifted, e.g. swing hook bolts which rotate upwards to engage.

Additional locks fitted to sliding doors and windows should be fitted in such a manner as to ensure any force applied to open the door acts against the lock fixing screws.

Wherever possible, additional locks should be fitted to the top and bottom of the interlock of sliding doors and windows. However, there are some designs, which make this impractical.

Sliding doors/windows should not be secured in the ventilation position when the premises are unoccupied.

7. UP-AND-OVER DOORS

Work on improving the security of up-and-over doors should be undertaken by professionals who have experience in this type of work.

There are security locking products available for this type of door and the advice of a professional (MLA Trade Member) should be obtained prior to commencing improvements.

8. FRAME FIXING

It could be necessary in some instances to improve the strength of the fixings holding door or window frames to the fabric of the building. Due to the presence of pre-cast concrete, steel lintels or other construction details, it might not be possible to achieve the desired additional fixings to the head or sill of the frame. The type of fixings used will be determined by the material to be fixed and the material to which it is to be fixed, however frame-fixing screws and bolts are available for this purpose.

The following dimensions for the positions of additional fixings are offered as a guide.

8.1 Corner Fixings

Additional fixings made between 150 mm and 250 mm vertically and horizontally from the internal corners of the frame to be fixed.

8.2 Vertical and Horizontal Fixings

Additional fixings made at approximately 600 mm centres between the corner fixings of the frame to be fixed.

For greater detail of improved fixings, reference should be made to BS 8213: Part 4:1990 Windows, doors and roof lights – Code of practice for the installation of replacement windows and doorsets in dwellings

9. GLASS AND GLAZING

As far as security is concerned the main consideration is the ease with which glass can be broken to provide access to window or door hardware. The glazing specification chosen should meet the design and performance requirements of BS 6262:1982 Part 4 Glazing in buildings – Safety related to human impact. For those installations where a higher degree of “security” is needed the glazing should be in accordance with BS 5357 Code of practice for installation of security glazing

There are three main types of glass. These are:

9.1 Annealed glass

Annealed glass consists of, float, sheet, cast (patterns) and wired glass. It breaks easily and when broken forms large sharp fragments. While wired glass can be fractured, it will act as a barrier but only until the wire mesh in the glass is sheared.

The application of an appropriate plastics film can increase the resistance of annealed glass to penetration

9.2 Toughened glass

Toughened glass, (tempered glass), is an annealed glass, except wired glass, that has been subjected to a heating and rapid cooling process that imparts a greater strength to the material. It is resistant to impact by blunt objects but can be fractured by penetration of the surface compressive layer. When fractured, the glass will not act as a barrier. In buildings it is usually found in 'risk areas' which include doors and adjacent windows, low windows, bathrooms, landings etc. Typically toughened glass is around eight times stronger than annealed glass but when it breaks it forms a multitude of small fragments. It is also vulnerable to breakage with a sharp point such as a centre punch.

Due to the method in which it breaks, toughened glass offers very little security. Its value is as a safety glass.

9.3 Laminated glass

Laminated glass consists of two or more layers of annealed glass bonded together by means of transparent plastic (poly vinyl butate - PVB) interlayers. When the glass is attacked the glass layers fracture but remain in place, held by the PVB interlayer. Thus laminated glass offers both increased security and safety over annealed glass. Typical laminated glass found in domestic buildings consists of two layers of glass and one interlayer to a total thickness of 6.4 mm (soon to increase to 6.8 mm). However, the number of glass layers and interlayers can be increased to provide enhanced security such that, eventually, bullet-proof glass can be produced.

The most common failure mechanism of laminated glass is for it to 'balloon' and fall out of the frame under repeated impacts. However, the time taken for this gives an enhanced level of security over other types of glass

9.4 Double glazing

Double glazing can be in the form of:-

1. Insulating glass units i.e. two or more panes of glass hermetically sealed at their perimeter. These provide the intruder with two or more panes to break

2. Double windows i.e. two separate single glazed windows in the same opening. These assemblies provide a similar deterrent but only if the inner window is secured.

9.5 Plastics glazing material

Plastics glazing sheet material consists of either a single sheet or combination of sheets laminated together. The performance of these materials is dependent on the polymer type, thickness, and support condition. The advice of the manufacturer should be sought in respect of their security and fire resistance performance, as appropriate.

9.6 Glazing

All glass or plastics glazing sheet material should be secured to the window or door structure in such a manner that it cannot be easily removed from the outside.

10. GLOSSARY

Anti-lift device. Device which prevents a door or window from being lifted in its aperture, where this lifting would decrease the effectiveness of a lock or enable the door/window to be removed.

Barrel bolt. Surface mounted fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening. The shoot is provided with a knob, loose key or similar for operation by hand.

Bolt (1). Movable part of a lock or latch that usually engages a component fixed to a frame and is withdrawn into the case,

Bolt (2). Fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the sliding part being provided with a knob, loose key or similar for operation. It may be surface mounted, or morticed.

Certified. A product subjected to a testing and ongoing audit programme by a MLA approved organisation.

Deadlock. Lock that contains only a deadbolt.

Escape lock. Deadlock that can be opened (even when locked) from the inside by a single action without use of a key.

Escutcheon. Surround with a shaped hole, with or without a pivoted cover plate, primarily to protect the door leaf from abrasion damage caused by key insertion. This could be for decorative purposes or to increase the security of the locking device.

Flush bolt. Recessed (flush) fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the moving part being provided with a lever, slide bar or knob.

Hasp and staple Two-piece fastening for doors which can be secured by a padlock. The hasp could be attached to a fixed or swivel bar.

Hinge bolt. Fixed projection on the hinge side of the door or window. The projection engages into a keep when the door or window is closed. Also known as dog bolt

Latch. Self-engaging device, usually operable from both sides, which holds a door or window in the closed position and is released by hand without the use of a key.

Lock. Fastener that combines within one case a latch operated by a handle and a deadbolt which secures the door or window in the closed position

Mortice lock/bolt. Lock/bolt where its body is fitted in a mortice cut into the closing edge of the door or window.

Multi-point lock. Lock that has a latch bolt and a number of other bolts positioned remote from the lock case but connected by rods, which are thrown by means of a single action.

Night latch. Latch with a single bevel latch bolt that is operated internally by a knob and externally by a key which automatically engages when the door is shut.

Night vent or ventilation position. Position in which the door or window can be secured whilst slightly ajar. This usually offers only limited security.

Padbar A device spanning the full width of the door opening with supporting brackets or staples fixed to the frame and secured by a padlock

Padbolt/padlock bolt. Door bolt which can be secured in the locked position by means of a padlock.

Rim lock/bolt. Lock/bolt for fixing on the face of a door or window.

Security bolt. Mortice or barrel bolt which can only be withdrawn by the use of a key.

Security screw. Screw designed so that it either cannot be removed when fixed or which requires a restricted access tool to remove it.

Strike plate. Flat metal plate, appropriate to the latch or lock, fixed to a frame to engage a bolt(s).

Throw - bolts with linear movement - Distance that the dead bolt travels from the fore end of the lock in an outward direction under the action of a key, measured perpendicular to the fore end.

Throw - hook bolts with arcuate movement. - Distance from the tip of the bolt travels from the unlocked to the locked position measured parallel to the fore end of the lock.

II. STANDARDS

The following standards are referred to in the text. The latest version of the standard shall be used.

BS 3621. Thief resistant lock assemblies – Key egress.

BS 5357. Code of practice for installation of security glazing.

BS 5544. Specification for anti-bandit glazing (glazing resistant to manual attack).

TS 621. Thief resistant electromechanically operated lock assemblies.

BS 6206. Specification for impact performance requirements for flat safety glass and safety plastics for use in buildings.

BS 6262. Part 4 Glazing in buildings – Safety related to human impact.

BS 7950. Specification for enhanced security performance of casement and tilt/turn windows for domestic applications.

BS 8213-4. Windows, doors and roof lights Part 4. Code of practice for the installation of replacement windows and doorsets in dwellings.

BS 8220-1. Guide for security of buildings against crime – Part 1. Dwellings.

BS 8621. Thief resistant lock assemblies – Keyless egress.

BS 10621. Thief resistant lock assemblies – Dual mode.

PAS 24. Enhanced security performance requirements for doorsets and windows in the UK.

PAS 3621. Multi point locking assemblies – keyed egress.

PAS 8621. Multi point locking assemblies – keyless egress.

PAS 10621. Multi point locking assemblies – dual mode.

BS EN 12209. Building hardware – locks and latches.

BS EN 1303. Building hardware - Cylinders for locks.

BS EN 1906. Building hardware – Lever handles and knob furniture.

BS EN 1935. Building hardware- Single-axis hinges.

BS EN 12320. Building hardware - Padlocks and padlock fittings.

BS EN 13724. Postal services – Apertures of private letter plates.

BS EN 1627-1630. Windows, doors, shutters - Burglar resistance.

SS 306 Sold Secure Specification for Mechanical, Domestic Door Security Systems.

SS 312 Sold Secure Specification for Cylinders for Locks

DHFTS 007 Enhanced Security Performance Requirements for Replacement Cylinders and/or Associated Security Furniture

APPENDIX A

Specification of acceptable hardware

A) All doors Hinge bolts or security hinges with protection from hinge pin removal on all outward opening doors.

B) All doors A lock certified to BS 3621, BS 8621 and BS 10621 together with its approved striking or box plate and accessories as tested.

C) All doors An acceptable alternative lock with the lock manufacturers approved striking or box plate and accessories as approved by the Insurers.

D) Single door A multi-point lock system with a minimum of three horizontal locking points with Pedestrian a central bolt (minimum throw 13 mm) and two dead or hook bolts garage (minimum throw 20 mm). All locked simultaneously by one operation of the doors key. Alternatively a multi-point lock certified to Sold Secure specification SS306.

E) Sliding Anti-lift devices

F) Sliding Main locking system plus key operated patio door lock or security bolts (minimum throw 9 mm) at the interlock at bottom of the door and if practical at the top of the door. Alternatively a patio bar.

G) Sliding A hook lock certified to BS 3621 or BS 8621 together with its approved striking plate and accessories as tested

H) Sliding A multi-point lock system with a minimum of three horizontal locking points Incorporating hook bolts (minimum throw 20 mm) and/or vertical shoot bolts (minimum throw 14 mm) locking into the head and sill of the door frame. All locked simultaneously by one operation of the key. Alternatively a multi-point lock certified to Sold Secure specification SS 306

J) Double doors The main locking system plus 2 key-operated rim or mortice security bolts 2nd closing leaf (minimum throw 14 mm) (casement doors)

L) Double doors Two key operated rim or mortice security bolts (minimum throw 14 mm) 1st closing leaf (casement doors) Windows

M) Double doors Two flush bolts (minimum throw 14 mm) mounted on door edge and 1st closing leaf concealed when doors are closed

N) Double doors- A multi-point lock system with a minimum of three locking points with a central 2nd closing leaf bolt (minimum throw 13 mm) and two dead or hook bolts locking into the head and sill of the door frame (minimum throw 14 mm). All locked simultaneously by one operation of the key. Or a multi-point lock certified to Sold Secure specification SS 306

P) Windows A window lock with removable key

Q) Windows A substantial locking handle with removable key

S) Windows A multi-point locking system with removable key

T) Doors A door-set certified to PAS 24

U) Windows A window certified to PAS 24

V) Doors to A heavy duty padbar bolted to the door and frame and fitted with a padlock outbuildings and fittings certified to EN 12320 Grade 3

APPENDIX B

Hardware required to be fitted (as listed in Appendix A)

Hinged final exit door A plus B, C or D, or T

Other single hinged external doors A plus B, C or D, plus L (2 off), or T

Pedestrian doors on garages and domestic A plus B, C, D or V, or T outbuildings

Double doors (1st closing door) A plus L (2 off) or M (2 off)

Double doors (2nd closing door) A plus B, J or N

Sliding doors E plus F C, G, or H

Louvre Windows See text

Accessible windows and ground floor L, P, Q, S or U openings (But not emergency egress windows)

A sash less than 600 mm in width or height requires a minimum of one locking point. For all other sashes a minimum of two locking points is required

MLA Code of Practice

OBJECTS

The Objects of the Association shall be as stated in the Memorandum and Articles of the Association.

The following is a summary of some of these objects:

- a) To protect, preserve, promote and represent persons, firms or bodies engaged in the locksmithing industry.
- b) To advance education and training.
- c) To agree standards of conduct, practice and materials.
- d) To maintain a high standard by members for the protection of the public at large.
- e) To enable the Association to attain a recognised status.
- f) To prescribe, regulate and conduct examinations and to charge fees, award qualifications.
- g) To carry on business as technical locksmiths, security consultants, specialist wholesalers, retailers and dealers in locksmithing tools, equipment and members' services.
- h) To apply for, purchase or otherwise acquire patents and licences.
- i) To produce, publish and distribute a journal.
- j) Co-operate with any body for the purpose of promoting the association.
- k) To purchase or lease property and/or rights for the purpose of the association.
- l) To do all such other things as are incidental to the attainment and furtherance of the said objects or any of them.

CODE OF ETHICS

To assist the achievement of the above Objectives, Each member of the Association, by his acceptance and continued membership thereof, shall be deemed to have subscribed to the following:

- 1) To pursue his activities, conforming to professional standards and maintaining high ideals of personal honesty and integrity.
- 2) To abide by the policies and codes of practice of the Association, as established from time to time.
- 3) To analyse impartially and to the best of his ability, security problems receiving his attention and to advance the best possible solution for the protection of his clients.
- 4) To conduct himself in a dignified manner and to refrain from using improper or unprofessional methods in furthering his business.
- 5) To co-operate in advancing the best interests of the locksmithing and keycutting industry, always ready to apply his special knowledge, skill and training for the use and improvement and betterment of his profession.

- 6) To encourage and promote loyalty in his profession by acting in a fair, reasonable and business-like manner in any dealings, especially those with any fellow member

INTRODUCTION

MLA Approved Companies' management and staff should provide products and services with skill and integrity. They should give all end-users the benefit of their experience in all aspects of security products and their applications.

There are five main areas of locksmithing services and the following codes are intended to clearly state a company's obligation to identify and interpret the requirements of the customer and to provide a fair and honest service to meet those requirements.

The codes also highlight specific exceptions that can occur due to the technical nature of some aspects of locksmithing and it is considered by the MLA to be fair that customers are made aware of these exceptions.

It is essential that the customer understands that the service or product does meet with their requirements and that they are aware of the costs or charges, either in writing or verbally and that they are also aware (if applicable) of the likelihood of any additional costs.

Certain lock and key systems are protected by law and replacement or extra keys will not be duplicated without the correct authorisation procedure. The company is obliged to operate these procedures to comply with law and in the best public interests.

INSTALLATIONS

MLA Approved Companies will be inspected periodically to stringent standards. Companies are dedicated to provide skilled and accurate workmanship, and are positively encouraged to maintain standards in Training, Equipment and Best Practices.

All companies must be properly insured to carry out security installations on, or to, a customer's premises.

Exceptions will occur if any alteration, amendment, removal or reinstallation is attempted by any persons other than the original installing company. This also applies if any undue wear and tear, abuse or act of vandalism is apparent.

If product failure or faulty workmanship causes a Lock-Out the company may reserve the right to ascertain the cause and carry out any appropriate rectification, also to make

charges where applicable, having advised the customer. Liability is limited to replacement value only of the same or similar equivalent product and in all cases limited to the guarantee periods.

VOLUNTARY CODE OF PRACTICE FOR CUTTING VEHICLE KEYS

This code suggests that you ask the customer to fill in the appropriate form and prove their identity under the following circumstances:

1. If a customer produces a vehicle part, for example - a door lock, petrol cap or ignition barrel.
2. If a customer provides a key number.

Customers should be asked to fill in the form and prove identity before you cut the key or order the key from a supplier.

The form can also be used in the case of key duplication when the member is uncertain that the customer is the rightful owner of the car.

If a member has regular customers that produce parts to cut keys for, it is recommended that the member has a brief record showing the date each key was cut and the registration number of the car.

It is the company's responsibility to get a form completed by the customer even if a key is ordered from one of the service providers; they will assume you have completed the formalities.

CODE OF PRACTICE FOR THE DUPLICATION AND/OR SUPPLY OF KEYS

This Code of Practice is effective from 1 January 2000 and supersedes all previous instructions/directions.

SECTION ONE - SCOPE

The Code of Practice shall apply to the duplication and/or supply of keys, whether on manufacturers original blanks or substitute blanks available from any legal source.

NOTE: It is expected that members, when asked to duplicate and/or supply keys, will (1) uphold the integrity of the Association and (2) protect themselves against the possibility of claims for damages by an authorised keyholder, should the member duplicate and/or supply a key to an unauthorised person.

SECTION TWO - PROHIBITED KEYS

Members are advised that it is illegal to duplicate keys which are protected by a current Patent and should never knowingly duplicate keys in contravention of the above.

SECTION THREE - DUPLICATION OF KEYS

These instructions apply to the duplication of keys, whether by hand or by machine, or cut to code, and/or supply of keys of the following types:

- (1) All keys identifiable as safe keys.
- (2) Master keys, Sub-Master keys, Sub-Grand Master keys and Grand Master keys.
- (3) Any key cut on a Restricted or Special Section profile blank and known to be used for master suites, restricted or registered keys.

SECTION FOUR - AUTHORITY TO DUPLICATE

The duplication and/or supply of such keys must only be carried out against a properly completed authorisation, such as the MLA "Authorisation for the Supply of Keys" form.

Alternatively, a properly constituted written customer's authorisation is acceptable. This must be on headed notepaper or a customer's order form, detailing the following:

- (a) Name, address and telephone number of the owner.
- (b) Name and address of the member requested to duplicate and/or supply the keys.
- (c) Quantity and type of key(s) to be supplied.
- (d) Markings (if any) to be put on such keys.
- (e) The signature of the owner or his representative, with the name also printed in capital letters and the signatory's position within the organisation.
- (f) Date of order.

A member requested to duplicate and/or supply such keys must be satisfied beyond all reasonable doubt as to the authenticity of both the authorisation presented and the identity of the person presenting the authorisation.

In the event of any doubt whatsoever, it is the responsibility of the member being requested to duplicate and/or supply security keys to check with the owner as defined, the authenticity of such an authorisation and to check the credentials of the individual presenting same. Full details of such investigations must be retained for a period of not less than two years.

SECTION FIVE - RECORDS

All members duplicating and/or supplying such keys must keep, for a period of not less than two years, all authorisation forms and letters. These are to be made available:

- (a) To the MLA Council upon request, to ensure that these instructions are being upheld or to assist in investigating complaints.
- (b) To a manufacturer of such keys, to prove that these instructions are being upheld and to assist in investigating complaints.
- (c) To an officer of the Police Force, Military Police, Customs and Excise, Inland Revenue or any similar authority acting in the investigation of crime.

SECTION SIX - CONTROL OF KEY BLANKS

Blanks for keys of a restricted section profile must be kept separately from standard blanks.

Under no circumstances may any restricted section profile blanks be altered to fit another section, nor may any blank be knowingly altered to fit a cylinder which the member believes to be of a restricted type. There are no exceptions to this rule.

Under no circumstances are blanks for security keys to be disposed of or sold to any third party without an official authorisation requesting such blanks and a copy of the owner's authorisation for the duplication of such keys.

CODE OF PRACTICE FOR OPENING & GAINING ENTRY TO BUILDINGS, VEHICLES & CONTAINERS

THIS CODE OF PRACTICE IS EFFECTIVE FROM 1 OCTOBER 1996 AND SUPERSEDES ALL PREVIOUS INSTRUCTION/DIRECTIONS.

SECTION ONE - SCOPE

The Code of Practice shall apply to any requests within a trading arrangement to open or effect entry into or onto all types of buildings sites, or property including vehicles, all types of containers, safes, cash boxes, cabinets and desks, any type of lockable or security devices.

SECTION TWO - PROOF OF AUTHORITY

Commercial or Industrial Premises

Proof of authority must consist of the following

- a) Official Order or Letter of Authority stating clearly the date, the address at which the service is required with precise instructions of the service required and who the authorised site contact will be.
- b) Faxed Authority as in (a) above.

Private Dwellings

One or more of the following:

- a) Driving Licence showing address of premises.
- b) Passport or other acceptable means of identity or
- c) Neighbour identification.
- d) Police presence.

Vehicles

One or more of the following:

- a) Driving Licence showing home address quoted
- b) Passport or other acceptable means of identity or
- c) Vehicle registration documents.
- d) Police or road Association presence.

There are 4 other sections which deal with advice to members on how to verify the customers authority to request this service. It is therefore inappropriate to disclose these security measures. Any person having need of this information may apply to the MLA's Head Office stating the reason for the request.

SAFELOCK
SYSTEMS

Safelock Systems Ltd is a supplier of high quality and high security Safelocks to the trade, stocking a range of mechanical and electronic Safelocks from leading manufacturers including LAGARD, KABA, Tecnosicurezza, Wittkopp, STB and Stuv.

Safelock Systems can respond quickly to orders, and prides itself on aftersales care and technical support.

Please visit our new website www.safelocksystems.com where you can find complete information about the products we sell, or contact us on 020 8949 1005, email sales@safelocksystems.com

MLA Approved Company Sector

The Master Locksmiths Association was first conceived in 1957 and was the idea of the Chubb Lock Company and one or two London Locksmiths. The prime mover was Mr. Steve Fallshaw, then a locksmith in The Barbican, who became its first Chairman when it was formally founded early in 1958. The original sixteen members decided the new 'association' should be known as The Greater London Master Locksmiths Association (GLMLA).

By the end of the first decade it had grown nationally with a wide distribution of members from all parts of the United Kingdom. At this time it elected its first national President namely Mr. Steve Stephens of Oxford. The association by now included members from overseas and a healthy growth has been maintained, we now number almost 1500 members in all sectors.

In the early 90's the association restructured to meet modern demands, retaining its title Master Locksmiths Association (MLA) it formed three sectors. They are the 'British Locksmiths Institute' (BLI) for its individual members' skill qualifications, 'Guild of Keycutters' for all producers of keys wishing to comply to standards and 'Approved Company' for trading companies. The fourth 'Affiliates' sector remained unchanged and represents the manufacturers' and suppliers to our industry.

Aims of the Approved Company Sector

Companies and locksmiths trading in their own right, with retail premises or operating as a mobile locksmithing business, join the MLA Approved Company sector. It is this sector of the Association that trades directly with the public and private sectors in the High Street and through Yellow Pages, and other advertising media.

The Approved Companies inspectorate means the MLA can demonstrate that all Company Members are meeting high standards. Each company is inspected on a regular basis, thus ensuring that its members and their operatives maintain standards in workmanship and administration. Also members are expected to conform to legal requirements and that customer charters exist to service customer satisfaction.

Inspections have the effect of making locksmithing companies more accountable for their daily operations. Approved Company members are made aware that the MLA considers that training is also a valuable means to maintaining standards. Training is offered at the purpose built, state of the art training facility at the MLA's Head Office in Daventry.

Continued growth of the Approved Companies ensures that the MLA can offer a national network of locksmiths and the Associations head office in Daventry refers enquirers to their nearest approved company. A National 0800 number enables potential customers to find the nearest member quickly or check those companies displaying the MLA logo are bona fide members.

The Logo depicted here is the one that is advertised by an approved company on their premises, vehicles and stationery, confirming to the public the standards expected of them.

Channels of arbitration exist to fully investigate any complaints or disputes, should they arise, and the MLA advises or takes any necessary action. The Board of Directors continually looks at consumer matters and advises members when appropriate.

The Approved Company sectors operates schemes whereby discounts may be available to policyholders of most well known insurance companies and they provide the service behind many major help-lines.

The Master Locksmiths Association "Approved Company" helpline is available to locate your nearest locksmith: — 0800 783 1498 or alternatively you can visit our website www.locksmiths.co.uk where you find you local MLA locksmith using the integrated search functionality.
