Introduction from Lee Wallace

Chairman of the Association of Insurance Surveyors

At a quick glance Standards, both European and British, are sometimes seen as Red Tape preventing businesses from operating in a smooth and efficient manner. Legislation and bureaucracy plays an ever increasing part in all of our lives and is often lamented. No doubt this perception of legislation emanating from Europe played a large part in the Brexit vote and the resulting upcoming conscious uncoupling for Great Britain from the European Union.

More often than not though legislation, and in particular standards, is for the benefit of businesses and consumers alike. Standards enable consumers to be sure what they are purchasing is of a sufficient quality and assists manufacturers to produce on a level playing field. Standards also enable specifiers such as architects, engineers and in particular my own line of business, Insurance, specify a standard rather than a particular product ensuring impartiality. Therefore standards are not to be feared but embraced as evidence of product suitability and professionalism, as such I would emphasise the importance of standards and strongly recommend the use by suppliers and consumers alike.

However, unfortunately a standard on its own does not necessarily ensure the quality of a product. This is because there will inevitably be some people and companies who claim to have products and services which meet a particular standard but in reality fall short, sometimes wilfully and deliberately. This is where 3rd party independent certification plays a crucial role in ensuring that the standards being claimed to be met are actually being met. Unfortunately anyone can claim to meet a standard but without 3rd party certification consumers, specifiers and competition can not be certain that corners and resultant costs have not been cut.

This is where trade associations such as the MLA are of a great help to manufacturers and consumer to check which standards they should be looking for. Furthermore

consumers can be confident that products which have been certified with Sold Secure do actually meet the claims made by manufacturers. I have always been a very big advocate of third party certification and wherever possible as a security specifier I look to specify not an individual product, but a standard and third party certification. Trade associations are there for the benefit of members and consumers and are probably not utilised enough for their expertise, advice and resources available to them. From my own personal experience the MLA have always acted quickly and professionally with any request for information and advice I have made.

Lee Wallace

Chairman of the Association of Insurance Surveyors (AiS
www.insurancesurveyors.org)

Former Chairman and current Deputy Chairman of Midland Security
and Risk Society – (www.msrs.co.uk)

Senior Account Manager at T H March and Co Ltd, specialist in jewellery
insurance to the trade and public. (www.thmarch.co.uk)

I have been in the insurance industry since leaving college 25 years ago. I started my career at Cornhill insurance for 5 years moving to T H March in 1998. Since joining TH March the specialist nature of our clients, both commercial and private, means a greater understanding of physical and electronic security is required over and above what is normally expected of insurance brokers. I have therefore been involved with the MSRS and AiS for a number of years working closely with suppliers and consumers promoting good security practice. One of the more recent projects I have undertaken involved working with the security fogging industry to develop the AiS code of Practice for the installation and servicing of security fogging systems of which the British and European standards played a heavy role.

THE CLOUD**

HOME**GUARD** *Pro*

SMART HOME SECURITY MADE SIMPLE

The **HomeGuard Pro** alert and monitoring system uses the power of the cloud for optimum simplicity and control.

Just plug in, set-up via smartphone, connect any of ERA's Wireless Accessories and you're ready to go. Get real-time alerts and view multiple HD video feeds all from within one app -Even monitor additional HomeGuard Pro systems in other locations using the same account.

Want your smart home to react when you arm or disarm? HomeGuard Pro's integration with Lightwave makes that simple too. What's more, you can always be sure you're getting the best from HomeGuard Pro because integrations and updates are streamed directly via the cloud.

No hassle, just simple, smart security.

See more about HomeGuard Pro at erahomesecurity.com

ERA

MLA Overview

The Master Locksmiths Association (MLA) is the leading trade association for the locksmithing industry. A truly not-for-profit organisation promoting the skill and integrity of its approximately 1,400 members, it was established almost 60 years ago to set and promote standards of conduct, practice and materials within locksmithing. Recognised as the authoritative body for locksmithing by the police, home office, British Standards Institute (BSI), The Risk Insight, Strategy and Control Authority - RISCAuthority (formerly IPCRes, the UK property insurers' technical group) and Building Research Establishment (BRE), the MLA also has a subsidiary company, Sold Secure, which performs certification of security products via manual attack testing.

MLA member companies, who undergo strict vetting (including criminal record checks, regular inspections to ensure quality etc.), are able to provide advice based on knowledge and experience, recommend products that are fit for purpose as well as provide professional installation and maintenance services. Details on your nearest MLA approved company can be found in the directory section of this handbook or on our website www.locksmiths.co.uk.

The MLA also provides training from its purpose built training facility based at the company headquarters (currently in Daventry but moving to larger premises in Rugby), consisting of a classroom type environment for theory work and fully equipped workshop for the hands-on practical elements (N.B. due to the content of some courses they may only be open to MLA members). Courses currently cover areas such as general locksmithing; opening; access control, safe engineering with others constantly under development.

Overview from the Managing Director

2017 was a pivotal year for the Master Locksmiths Association. Not only was MLA Expo 17 the biggest and most successful ever (more of which later), but after years of discussing and searching we have finally purchased a new property to become our new Head Quarters!

The association's move to the modular approach for locksmith training has continued to prove to be a massive success with all MLA courses running at, or close to full, capacity during the year.

Then there was the promotion. You'll see from one of the articles in this Handbook that the association's PR got the MLA (and therefore its members) in front of over 9.45 million readers during 2017 and covered both at a national and regional level. Not only did we have a phenomenal amount of media presence, but the association was also present at numerous shows throughout the year, enabling us to promote the use of MLA Approved Companies and Sold Secure approved products.

I mentioned it at the outset, but I think it's fair to say that MLA Expo 17 was somewhat of a success! You can read all about it and see plenty of professionally shot photographs from the event in the review article

So what does 2018 have in store? More hard work from the head office team is a given!

Indeed, 2018, the association's 60th year, will see the MLA move to newer, larger premises in Rugby.

The MLA needed to stay in the Midlands in order to help maximise the opportunity for members and visitors to get

to us. Good communication links (ideally just off a motorway) were paramount, but we also had to consider the specific requirements we had in terms of type of building, vicinity to accommodation, staff etc. so it wasn't a particularly easy search. Whilst I appreciate that looking for a new property isn't anything new at the MLA, indeed it was going on well before I joined, it's been the past couple of years in particular that the search has shifted up a gear with properties all around the Midlands having been looked at properties from North of Birmingham, to Warwick, Banbury, Daventry, Northampton, Rugby.... And indeed, we've been close on a couple of occasions; but Prospect Park was the only property that has ticked the most boxes whilst offering a decent price without the need for any significant re-building work and so is the one.

Our property at Woodford Halse has served us superbly well, and those who took the courageous decision to purchase the units are to be applauded. It was the right property at that time and it will certainly have helped the association take the required step up at that time and help "professionalise" the association, employing staff to help run it etc. But the time has come for the next step, and that is a move to a larger, more impressive, newer, detached building, and with Prospect Park we believe that's exactly what we've found. With the work we want to do on the new property we feel that first impressions will truly be of a 21st Century Professional Trade Association. Inviting guests from police, insurers, government etc. will allow us to show something we can be truly proud of, and it gives us the opportunity to create an industry leading training facility and world class attack test facility for Sold Secure.

From an operational point of view, bringing the 2 companies (MLA & Sold Secure) together into 1 building makes perfect sense. It allows us to share infrastructure, to cut costs (no more 2 alarm contracts, separate utility contracts....etc.) and helps improve communication. However, we will still have the confidential nature of the Sold Secure test lab which will have restricted access, so customers will have no issues with people seeing their testing or anything like that – we'll simply have far more space to do the testing in!

So we're currently busy planning all the work, designing the layout, getting quotes etc. so that work can commence with a goal of moving in by mid-2018.

Believe it or not work on Expo 19 has already started, and there'll be plenty more to do this year. The show may only come around once every 2 years, but it takes the full 2 years of planning to make it run smoothly.

Overview from the Managing Director

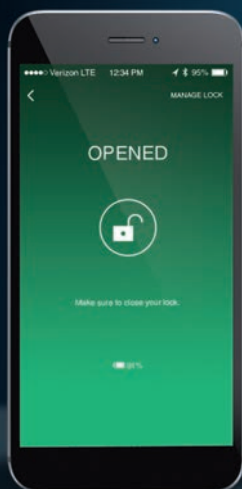

Promotion will yet again be a main feature for the association and benefit for members with more PR to be generated to promote the association and its members in the media and more exhibitions being attended.

And finally, the training on offer from the MLA will continue to be developed further. The exciting move to Rugby and the industry leading training facility that we intend to build there, will enable far more training courses to be run – so watch this space!

We look forward to yet another year of challenges and hopefully plenty of successes too!

Master Lock

MLA Member benefits

So why join the MLA? What's in it for the locksmith? As well as the training and MLA Expo mentioned elsewhere in this handbook, there are a significant (and ever growing!) number of other benefits to MLA membership. These include:-

Members Journal

All members receive the association's official magazine "KEYWAYS" as part of their membership subscriptions. This is an in-house magazine for members only, with hints, tips, new products, information on the association, meetings, exhibitions, members' letters and membership details.

Regional Meetings

Members at all levels are encouraged to attend regional meetings where they can meet their colleagues in the association, talk to experts, listen to seminars and visit small exhibitions. The MLA has recently implemented a Continued Professional Development scheme for which points can be gained by attending the training provided at these meetings.

Members Forum + Members Facebook Group

There is an interactive web based forum for MLA members to share information, ask questions and further enhance their knowledge, whilst also networking with colleagues and sharing work.

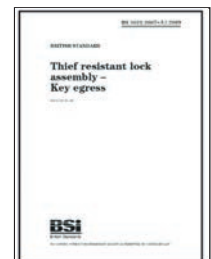

We have also recently setup a exclusive members only Facebook Group which has proved popular amongst members.

Supplier Discounts

- A number of Suppliers, including MLA affiliate members provide significant discounts on their products or special deals to MLA locksmiths, this can be anything up to 25%.
- We also have a special deal with Smartwater where a specific MLA only Home Security pack is available (at discounted rates over RRP) which when sold provide the MLA member with cash back.
- There are numerous special sections for MLA members.

Technical Assistance

- The MLA's Technical Manager is on hand to help answer any questions you may have relating to for example lock standards etc. By sitting on the various lock related working groups and British Standards Committees the technical manager has first-hand information as soon as items are discussed and provides regular feedback to members via articles in the association's journal or by presentations at regional meetings.
- A significant amount of useful information (links to useful documents etc) is available via the members section of the website.
- The MLA has also purchased access to the AIS Safe List and are able to provide cash rating info to members who ask about specific safes.

Health & Safety and HR support

- MLA Approved Companies and Affiliate members get free access to specialist support in the vital areas of H&S and Personnel law as part of their company membership subs. Personal members get discounted access to this service.

Insurance Related Benefits

- The MLA has negotiated preferential rates with a number of insurance brokers. These include specialist policies for locksmiths and discounted general policies.
- Members are also eligible for specialist healthcare cover via deals done with 2 companies
- MLA members have the option to benefit from a 30% discount over standard prices for the use of DebtorController.com, a low cost online debt collection service specifically designed to make it both easy and extremely cost-effective for businesses to secure monies owed to them using an online system that automates the process of debt recovery.

- Banking advice is available from one of the UK's leading independent banking advisors as well as independent financial advice from a leading firm of advisors.
- Discounted mortgage and pensions are available to members
- Discounted credit card processing rates are also available via 2 major suppliers. Terminals, including mobile terminals for taking payments away from the office, are available to members at discounted rates. The association also has a scheme with a 3rd supplier specifically for members maybe don't require terminals, or want only a mobile terminal to take the occasional card payments, or who don't want the high standing charges associated with credit card terminals.
- Discounted business finance is offered via the BIRA Bank. This also includes access to the BIRA clearing system, a system that helps you save time as well as bank charges by paying all your suppliers with one cheque via BIRA's clearing house.
- Asset finance is available via a partnership with a major player and this extends to enabling members to offer finance to customers for specific jobs thereby helping the customer's cash flow whilst enabling the member to be paid in full immediately.

Vehicles

- There are many vehicle related deals available to members, the main one being a range of significant discounts the MLA has negotiated with Vauxhall (on both its commercial range and cars)
- Vehicle discounts are also available through 'Tyson Cooper' for discounts on Vauxhall, Nissan, Ford vans and company have also got Renault, Peugeot/Citroen and VW who've agreed to offer discounts.
- Discounted AA membership is available to members as well as special rates with Bodyshops online.

Advertising & Promotion

- As well as being advertised on the MLA's find a locksmith page, in this handbook and in the Security Industry Directory, MLA approved company members can also advertise in corporate boxes in various directories. They are also automatically entered onto a number of websites and have the option of being included in various other directories either at discounted rates or in ones which are limited to MLA members only.
- Members can benefit from a 25% discount on website creation and hosting and get a free website stats package via a deal brokered with Site Wizard.
For those who don't want a whole website then a "webvert" can be offered; a simple one page site so that you at least have a web presence with your own dedicated web domain and associated e-mail addresses
- The SoleTrader Group are offering MLA members significant discounts on websites as well as offering corporate clothing and discounted business stationery.
- Mobelio are offering MLA members discounts for mobile specific websites
- Sign-Up.to and 123-reg provide MLA members with 25% discount on website services and 20% discount on email marketing tools
- Which? Trusted Trader - MLA members can enjoy beneficial rates when joining.

Admin/Paperwork Assistance

- MLA members get discounted access to YourTradeBase software. A web based solution to help you keep on top of your paperwork, manage your workload and win more work.

Telecoms

- The MLA has teamed up with a leading Telecoms provider to offer members discounted telecoms deals for landline, mobile and broadband requirements

Training

- MLA member are eligible for a discount on the FDIS online diploma in Fire Doors
- Distance learning courses via partners covering topics such as H&S, selling skills, basic retail legislation, customer care etc.
- A specific web based distance learning platform is being launched with discounts for MLA members.
- 20% discount on Tavcom training

Others

- Discounted Holidays to Tuscany
- Health & Safety and Personnel support via various partners
- PNC Stolen Vehicle checks (via Retaina Group)
- Discounted British Standards
- Specialist Intellectual Property Rights advise and discounted rates

If you're interested in more details of any of these benefits then please contact the association on 01327 262255 or enquiries@locksmiths.co.uk

MLA Training

MLA locksmithing technical courses are taught by experts in the respective fields. All tutors have a significant amount of experience to pass on to students and are all experts in their field.

The establishment of a purpose-built training centre at the MLA's head office enabled the organisation of a basic training programme in 1992. This has been subsequently added to an improved to become what is now very successful training package, culminating in the BLI Exam which is renowned throughout the locksmithing industry as the only formal locksmithing exam based accreditation.

The exam itself is split into 4 parts and includes a written section on locksmithing knowledge and 3 practical parts which cover fitting, opening and cutting a key by hand.

The MLA's technical excellence in training has been recognised by the military with the awarding of preferred supplier status to the Career Transition Partnership as well as being designated an Enhanced Learning Credits scheme provider (No. 1681)

The MLA's training has also been recognised in the past by City & Guilds where we used to be an Approved Training Centre (No. 027758) offering a tailored C&G award in basic locksmithing (No. 1841) however this had to be withdrawn

as we were not "conveyor belting" enough students through to make the commercial figures C&G were looking for. During the development of the apprenticeship we also became an approved centre for the awarding body HABC (Highfield Awarding Body for Compliance) however when the details for the apprenticeship were developed it became apparent that as the MLA was providing the 2 "off the job" training courses for the apprenticeship to Skills for Security, this HABC approved centre status was no longer required.

Courses Available include:-

Technical Courses

- General Locksmithing
- Opening
- UPVC
- Safes
- Access Control
- CCTV
- Wireless Alarms
- Electrical Safety
- Fire Regs
- Asbestos Awareness

New courses are constantly under development so please contact MLA head office or visit the website for more information

Why do training courses in a particular order?

The MLA puts particular emphasis on providing high level of training in the best fashion. For this reason, unlike many other training schools we only offer opening courses to more experienced locksmiths or those who have done some general locksmithing training. The reason is to ensure a general understanding of the principles of how locks work to ensure the maximum is gained from the opening course (and the techniques learned can be implemented to the best effect)

We are also careful in what we teach to whom, requiring DBS (formerly CRB) checks to be undertaken before we will teach advanced opening techniques.

In fact the MLA is the umbrella organisation for DBS checking within the locksmithing industry, having been added to the exceptions order for the rehabilitation of offenders act back in 2009. (More information on this is available on the MLA's website)

Modular Locksmithing Training

A significant amount of work has been put in over the past few months in order to modify the MLA's training offering, not only updating it but most importantly making it modular. Having undertaken extensive research the MLA's Board of Directors and Training Committee decided to make the initial training offering (that aimed at new locksmiths or those wanting to enter the industry) modular, and to this end the initial training offering has been changed to consist of:-

- A 2 day Foundation Module
- A 1 day fitting module
- A 1 day UPVC module
- A 1 day basic opening module

Foundation Module (2 days)

- Types of locks current in use & terminology
- Cylinder Key Identification
- Pin Tumbler Mechanisms
- Cylinder Key Machine Set-up, Maintenance & Safety
- Cylinder Key cutting by machine
- Stripping rim cylinder
- Mortice key blank identification
- Lever mechanisms
- Mortice Key cutting by machine
- Mortice locks
- Lever lock key cutting by hand
- Safes (brief overview)
- Lock Opening Basics (intro to picking, wafer lock and picking open disc tumbler lock)
- Code Key cutting

Fitting Module (1 day)

- Tools for fitting
- Fitting rim nightlatch
- Fitting lever mortice lock
- Upgrading lever mortice to euro cylinder operated mortice
- Fitting secondary security devices

UPVC Module (1 day)

- Multi Point Lock ID (various locking types/mechanisms, backsets, strike plates, profiles and packing etc.)
- Toe & Heeling
- Opening Jammed Mechanisms
- Gearbox Replacement
- Hinges & Handles
- Security upgrades
- Additional security

Opening Module – Level 1 (1 day)

- Tools for opening
- Methods of entry
- Opening authority procedure
- Theory of mortice lock picking
- Picking 2 & 3 lever mortice locks
- Other opening methods for 2/3 lever locks (jigglers, overlift)
- Basic Lock Identification of non BS locks (how to)

- Theory of Mortice Lock Drilling
- ERA 5 lever padlock opening
- Theory and then practical of picking pin tumbler locks
- Theory and then practical of drilling cylinder locks
- Pick Guns
- Overview of other opening techniques (bumping, snapping, slipping, letterbox tool)

These initial modules are open to non-members however they must take the Foundation module first. MLA Members (and employees of company members) can however pick and choose what they want. Due to the nature of DBS checks only being possible on MLA members, for any non-members wanting to attend these modules then we will need them to provide us with a Basic Disclosure (available from the likes of Disclosure Scotland) which is no older than 3 months.

Further Modules

Following the success of this modular approach, the Training Committee have developed further, more advanced modules. This includes the following:-

Modern Mechanical Locksmithing – Bench Locksmithing (Half Day)

Key Machine Set-up, Calibration & Maintenance
Disassembling & Re-assemble Euro Profile Cylinders

- Methods of disassembling
- Passing
- Mastering
- Modular assembly to construct the correct size
- Re-profiling & changing cams

Workshop Tools

- Making a key horse, plug followers, gauges etc.

General Lock Repair

- H&S issues relating to hot work
- Silver soldering
- How to extend a key
- How to fit a drill pin
- How to repair a stump
- Re-springing a lever/detainer
- Repairing a gated lever

Modern Mechanical Locksmithing – Furniture Locks (Half Day)

- Lock recognition – logos, marks & shapes
- Key recognition – convenience, logos & head shape
- OEM
- Key cutting
- Lock decoding (various methodologies)
- Core removal (core removal key or bypass tool)
- Key code identification
- Master keys & pass keys
- Opening & bypass methods (incl. picking)
- Furniture lock & mechanism repair
- High security container locks
- Radial Pin Tumbler locks – opening & decoding

Modern Mechanical Locksmithing – High Street/Commercial Premises Locksmithing (Full Day)

APG Doors & Locks

- Definition
- Different types of applications
- Where & how they're fitted
- Different types of rails
- The 'Patch System' explained
- Pitfalls of removing & re-fitting
- H&S-related issues

Aluminium Doors

- Types of springs used
- Distinguishing between the side & end load, hold open & non-hold open method
- Different sizes & their applications
- Fitting
- Types of closers & pivots
- Adjusting/calibrating aluminium doors
- Types of locks & fitting them in conjunction with Access Control systems
- Specialist hardware (e.g. fire escape applications)
- H&S-related issues

Modern Mechanical Locksmithing – Opening Module (Level 2) (Lever)

Introduction

- Basics of methods of entry
- Opening authority procedure

Lever Locks

- Differences between various 5 Lever Locks
- Lock Identification
- How to open non-curtain & curtain 5 lever locks
- Background on mortice lock drilling (incl. dangers)
- How to open pre-drilled locks
- Drilling fresh open lever locks
- Intro to Non-Destructive Opening of Lever Locks (various methodologies)

Plenty of other training courses and training material are available from the MLA

Safe Course

A 2 day residential course dealing with domestic and light to medium commercial safes, covering:-

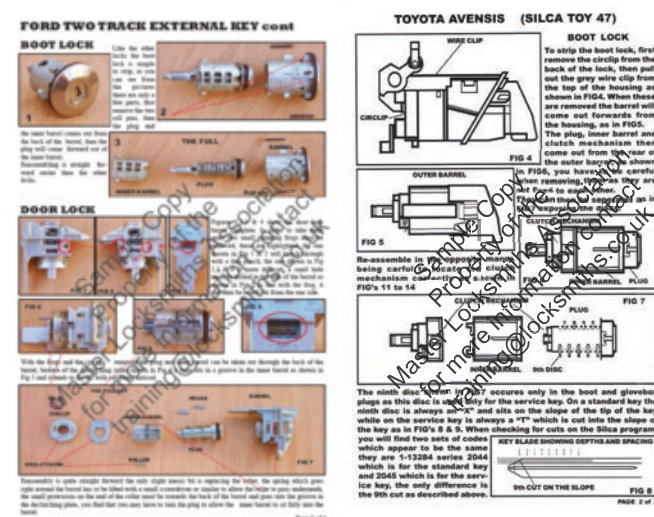

- Introduction to start at common level of knowledge.
- Overview of safe construction, locking methods and opening techniques, including wording of invoice to cover work completed.
- Drill technology including sharpening, Drill rigs type and use.
- Hardplate penetration and lock manipulation methods through drilled hole.
- Relocking devices in detail- pitfalls and rectification.
- Safe repairs following opening by penetration.
- Safe repairs and maintenance as a result of user problems excluding lock-out.
- Alter combination & cut new keys.
- Final assembly adjustments, test & hand safe back to customer.

All subjects covered will be by taught by lecture and demonstration. In the case of safe opening, students will examine safes in open state followed by practical opening of a randomly selected safe in teams of two by drill and tool manipulation, a case of a lock-out due to relocker activated will be demonstrated.

Auto Locksmithing detailed notes

Automotive security is becoming ever more complex, and as such the art of auto locksmithing itself is becoming more specialised with the need for modern equipment and constantly updated know-how. The MLA offers some detailed notes on locks for some of the most popular vehicles.

Other Training

Other training courses are available to MLA members such as Electrical Safety (connecting to a fused spur), Abrasive Wheels, Marketing, Website effectiveness to name but a few, and we are working with our affiliate members to provide further courses in the near future.

Training is run at a regional level as well as at head office and of course at MLA Expo

The MLA sees training as a never-ending activity for locksmiths, irrespective of how experienced they may be, and to promote this the association has its Continued Professional Development (CPD) scheme whereby members record the training undertaken.

A bit of advice on locksmith training

Some training outfits are very bold with their statements that taking their short course will enable them to become fully trained locksmiths earning £50k + per year, but this is surely very much the exception rather than the rule? The MLA believe it's vital that the learner spends a lot of time thinking carefully about wanting to become a locksmith and does as much homework as possible. There are parts of the country that are overcrowded with locksmiths (some of

whom are working part time so not necessarily needing to "make a living" from locksmithing alone and thereby doing it at unrealistic rates), whilst there are other locations that aren't as populated with locksmiths. We believe it's vital that anybody wanting to become a locksmith does as much research as possible; looking at where they'll be operating, what sort of services are required there, what the competition is like, where the gaps are in the market, what realistic set up costs are and how this compares to realistic earning potential etc. Locksmithing can be a very fulfilling and rewarding career, but it is that; a career, not a short-term money-making scheme. We recommend that those wanting to join the industry do it the right way, seeing it as a longer-term investment, wanting to learn the right way, from the right people/organisations (we'd recommend anyone interested in learning to be a locksmith gets as many references as possible for training providers for example, where possible talk to the providers and those who've taken courses, even visit to see what the facilities are like. There's a lot of good training out there, but unfortunately a lot of very poor training too so choose wisely!)

For more info contact The MLA head office on:-

Use of Abrasive Wheels in the Workplace by John Harding MBLI

Grinding and cutting machines have long been a valuable part of the engineer's toolkit. They are capable of making otherwise long arduous tasks quick and easy thereby saving time and money; however, in untrained hands they can be highly dangerous and in far too many cases even lethal both to the operator and to unsuspecting members of the public who happen to be in the wrong place at the wrong time.

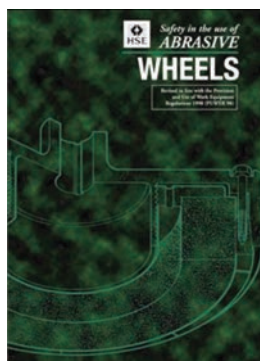

The dangers of these machines has long been recognised and training for operators has been made available for decades. The Provision and Use of Work Equipment Regulations (PUWER) came into being in 1970 but was completely revised in 1998 with various sections covering all aspects of work equipment being added at subsequent dates as deemed necessary.

It needs to be said that PUWER covers all types of work equipment where misuse of any equipment in the workplace could present a danger to the operator and/or third parties. Abrasive Wheels is one particular area where injuries have occurred on a regular basis over many years, with on average approximately 6,000 visits to A&E per annum. These injuries take many forms and differing levels of severity from minor abrasions through to fatalities most of which could be prevented by proper training and observance of basic safety rules. Where Abrasive Wheels are concerned there are constant revisions being made in an attempt to reduce the number of serious incidents that are still regularly occurring.

Documents

HSE documents relating specifically to the use of Abrasive Wheels are available for free download from the HSE website, the latest edition (pictured below) was released on 15th December 2015

Safety in the use of abrasive wheels:
Series Code HSG17

Web address:

www.hse.gov.uk/pubns/books/hsg17.htm

In addition to looking at essential training needs, the guide also focuses on details such as: wheel characteristics; safety in grinding machine operations; wheel mounting procedures and issues; guards; extra considerations for portable or hand-held grinders; and protective equipment requirements.

Regulation 9 of PUWER 1998 states:

1. Every employer shall ensure that all persons who use work equipment have received adequate training for purposes of health and safety, including training in the methods which may be adopted when using work equipment, any risks which such use may entail and precautions to be taken.
2. Every employer shall ensure that any of his employees who supervises or manages the use of work equipment has received adequate training for purposes of health and safety, including training in the methods which may be adopted when using the work equipment, any risks which such use may entail and precautions to be taken.

It is incumbent therefore on every employer whose employees use abrasive wheels, to ensure that everyone on their staff who use this equipment is properly trained and certificates of competence are obtained for each person. This also applies to the self-employed operator, in fact anyone who uses an abrasive wheel machine during the course of their work.

Abrasive Wheels Courses

To this end training courses are available across the UK and are run by a number of companies who manufacture grinding machines and/or abrasive wheels. The Master Locksmiths Association also run a comprehensive Abrasive Wheels Courses tailored to the locksmith industry. These courses are run from the training facility at Woodford Halse and, on occasions, at various locations throughout the UK.

Arrangements can be made, subject to numbers, for the MLA Abrasive Wheels tutor to visit venues across the UK and run these courses at MLA Regional meetings, and for specific companies where necessary, and supply certificates for every trained individual.

To book onto or arrange a MLA training course please contact the MLA Head Office in Woodford Halse on Tel. 01327 262255, E-mail: training@locksmiths.co.uk or access the MLA website www.locksmiths.co.uk

About John Harding

John Harding has been in engineering in a variety of disciplines since leaving school in 1959. In 1977 following a change from engineering to managing a hand tools shop in Bristol installing key cutting machines was a natural progression to an engineering background. This in turn led on to selling locks, then installing them and carrying out repairs to customers locks. The opportunity came in 1989 to buy a Keymaster franchise for Bristol which was very successful, and after 4 years running the company he took the Master Locksmiths Association (MLA) Basic locksmiths course at Woodford Halse passing the BLI exam at first attempt.

In 2010 he attended a Northern Region MLA meeting at Chester and during one of the sessions Chris Taylor stated that anyone using a grinding machine or angle grinder should attend an Abrasive Wheels Course as it was a legal requirement for anyone using such equipment in the course of their work.

This led to research as to the accuracy of that statement and the discovery that it was true so he arranged to take a course with 5 other working locksmiths from the London Region.

Following retirement from locksmithing in 2011 he then decided to progress to being a trainer for Abrasive Wheels and took the 'Train the Trainer' course at Abtec Industries in Wisbech, Cambridgeshire in 2012 and subsequently became the Abrasive Wheels Trainer exclusively for the MLA.

**ABRASIVE WHEELS
CERTIFICATION
COURSE**
 Chisel Sharpening &
Silver Soldering

Under the Provision and Use of Work Equipment Regulations 1998 (PUWER), it is a legal requirement for those involved in the use of abrasive wheels to be properly trained.

ABRASIVE WHEELS

- Preparing risk assessments
- Recognising hazards
- How to keep hazards from becoming incidents
- Proper safe storage of discs and wheels
- Understanding codes and standards on discs and wheels
- Choosing the right disc for the job
- Varying types of abrasives and how they work
- Selecting correct items of PPE
- Machine maintenance
- Disc and wheel mounting procedures

CHISEL SHARPENING

- How to re-grind a damaged chisel
- Honing the blade
- Re-hardening and tempering a chisel that has been overheated during the grinding process
- Hands on practical (bring your own chisels)

SILVER SOLDERING

- Choice of silver solders and fluxes
- How to silver solder successfully
- Hands on practical (test pieces supplied)

MLA Continues its Collaboration with the Insurance Industry

The MLA continues to work closely with insurance companies, providing training seminars on the various lock related standards that exist and working with insurance risk surveyors to help them understand what they should be specifying in order to help minimise risk. Indeed, we were delighted to have been invited down to the Association of Insurance Surveyors meeting in London in October 2017.

Documents (for example the one shown to the right) have been provided to insurers during these seminars and have proven to be excellent guides, and very popular – with extra copies and electronic versions having been requested after the presentations, as well as copies of the MLA Handbook and Sold Secure Catalogue having been distributed on USB stick.

We have also played our part in drawing attention to a fairly new set of guidance documents on physical security for homes prepared by the RISC Authority, an annually funded research scheme supported by a significant group of UK insurers that conducts research in support of the development/dissemination of best practice on the protection of property and business.

These new guidance documents are partly intended to update insurer awareness of new lock standards and types of lock best suited to different types of doors and windows, and otherwise provide related guidance to the public. They also include a 'model' Minimum Security Standard (MSS). Two of the guides are publicly available from the RISC Authority website:

1) S24: Physical Security for Homes: Guidance for Occupiers

(http://www.riscauthority.co.uk/free-document-library/RISCAuthority-Library_detail.s24-physical-security-for-homes-guidance-for-occupiers.html)

2) S25: Physical Security for Homes: Guidance for Insurers

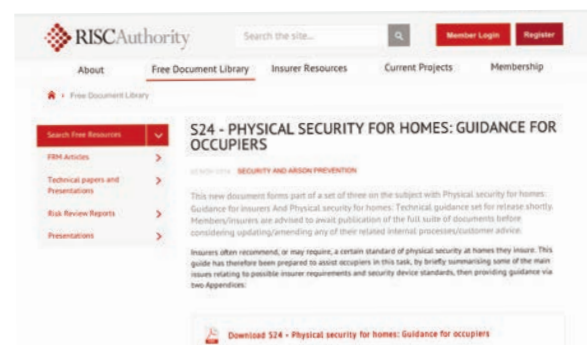

(http://www.riscauthority.co.uk/free-document-library/RISCAuthority-Library_detail.s25-physical-security-for-homes-guidance-for-insurers.html)

MLA members who are aware of the content of these two guides will be in a better position to advise their customers on how to satisfy likely/actual insurer requirements, or in cases of query/difficulty with the latter advise customers (and their insurer) of possibly acceptable/better alternatives – as may be suggested by the guides' 'model' MSS.

Note. In addition to the above, a detailed supplement to the more general insurer's guide was produced called 'Physical Security for Homes: Technical Guidance'. This is intended to aid insurer's senior staff/surveyors in reviewing the many issues that relate to the drawing up and implementation of a MSS – but access is restricted to RISC Authority members.

The occupiers' guidance document is the key public document and refers to the MLA in a number of sections, providing good promotion not only for the association but importantly for its members too.

For example: The MLA is acknowledged at the beginning of the document for the support and assistance provided in the generation of the guide.

Acknowledgements

Most of the organisations mentioned within this guide have contributed in one way or another to its development and our thanks are accordingly extended to them. Particular thanks are extended to The Master Locksmiths Association (MLA), the Door and Hardware Federation (DHF) and Secured by Design (SbD) for their continued advice and input. Thanks are also due to companies within the Asda Group (Yale, Union and Adams Rite) for the provision of many of the images.

IMPORTANT NOTICE

This document has been developed through the RISC Authority and published by the Fire Protection Association (FPA). RISC Authority membership comprises a group of UK insurers that actively support a number of expert working groups developing and promoting best practice for the protection of people, property, business and the environment from loss due to fire and other risks. The technical expertise for this document has been provided by the Technical Directorate of the FPA, external to the RISC Authority.

The FPA has made extensive efforts to check the accuracy of the information and advice contained in this document and it is believed to be accurate at the time of printing. However, the FPA makes no guarantee, representation or warranty (express or implied) as to the accuracy or completeness of any information or advice contained in this document. All advice and recommendations are presented in good faith on the basis of information, knowledge and technology as at the date of publication of this document.

at the user's own risk. Anyone considering using or implementing any recommendation or advice within this document should rely on his or her own personal judgement or, as appropriate, seek the advice of a competent professional and rely on that professional's advice. Nothing in this document replaces or excludes (nor is intended to replace or exclude) entry or in part, mandatory and/or legal requirements however arising (including without prejudice to the generality of the foregoing any such requirements for maintaining health and safety in

It's great to see the use of the MLA Approved Company logo and mention of MLA members when the document talks about competent locksmiths.

Security isn't something for DIY, rather DIFM (do it for me)! Expert locksmiths will be able to specify, supply and fit the correct security devices.

Of course MLA Approved Company members have met the "Vetted, Inspected and Qualified" criteria enabling them to use the MLA logo with pride.

Identifying security devices

Once fitted, and assuming no original packaging/instructions are available, establishing what type of security device is present can be difficult. In such circumstances you need to examine the security device, step by step, to glean what information you can:

- look at the external parts of the security device for markings relating to certification to a required standard; noting that when an insurer specifies a particular standard they will usually accept a security device that meets any dated version of it, ie they will not usually require an upgrade to the latest version;
- if the marks seen do not appear to be of the required type, it is possible you have a security device or door/window that meets another standard or an external security approval scheme. For example, a complete door/window assembly might be marked to show that it meets PAS 24 and/or has Secured by Design status;
- if there is no external marking, you may be able to establish that it meets an insurers functional requirements (if so described in their MSS). An example of this might relate to the type of an cylinder multi-point lock assembly fitted to plastic (PVCU) doors, where a suitable standard (eg PAS 3621) has only recently been developed; and
- if unable to establish satisfactory information via the above steps, you may wish to:
 - remove it yourself (to look for internally applied marks, or perhaps count the visible ends of the pins in a cylinder barrel);
 - consult a competent locksmith (who after examining it and/or the key, as removed or in-situ, should be able to determine its type); or
 - obtain and fit a replacement security device of the required type.

Identifying glazing

A piece of glass in a door or window is most likely to show some sort of permanent marking if Building Regulations require that 'safety glazing' be used there. The two most common forms of safety glazing are toughened and laminated glass, but only laminated glass also provides a security function. To check whether a piece of glass is laminated you should:

- Look for a suitable mark on the surface of the piece of glass, the current (Building Regulation) requirements being that safety glazing shows:
 - the manufacturer's name;
 - the manufacturing standard – BS EN 14449 for laminated glass; and
 - a safety classification from BS EN 12600 – either in abbreviated form, ie Class 1, 2 or 3 (where 1 is the safest), or as a full classification code in this form: a number (1-3) followed by a letter (B for laminated) and then another number (1-3), eg use of the code '1B1' would be typical for most laminated glass.
- If the mark(s) seen do not appear to match those mentioned above it is possible you still have laminated glazing, but of a type that meets another standard or external security approval scheme. For example:
 - older safety glass may be marked with the manufacturer's name and a safety classification from BS 6206, ie Class A, B or C (where A is the safest), but it will only be laminated glass if the word 'laminated' and/or a code letter 'L' also forms part of the Class coding, eg Class 'LB'.
 - Alternatively you may have a standard for laminated security glazing, BS EN 1562, with

The MLA appears in the 'summary of key points', where the document outlines that trade associations, such as the MLA, can be an excellent source of information.

4 Summary

FAQ

Where else can I go to for home security advice?

Your insurer or bodies such as the Master Locksmiths Association (MLA), Secured by Design and the Door and Hardware Federation (DHF)

When considering whether or not your home has a reasonable level of physical security in place, there are an ever expanding number of issues to consider, eg a variety of door/window types, new standards and Building Regulations—plus the related interpretations of them made by bodies that may have been involved in 'approving' new homes, eg the National House Builders Council (NHBC) and Secured by Design (SBD).

Whilst this task can seem complicated, armed with a little background knowledge (as contained in this guide) and by reference to the 'model' MSS, and perhaps other sources of home security advice, it can be undertaken in a methodical manner—and any necessary improvements then more confidently made.

If you are at all unsure how to proceed, and particularly where your insurer is applying a compulsory MSS, do seek their advice and, as appropriate, that of a competent locksmith and/or glazier.

Summary of Key Points

<p>Insurers often recommend, or may require, a certain standard of physical security at homes they insure</p>	<p>• Insurer's expectations are usually outlined in a document/policy condition typically referred to as a 'Minimum Security Standard' (MSS), or a similar term. This will identify the doors and windows that need to be secured at the perimeter of your home and specify the recommended/required security devices. It may also set out when the devices need to be used.</p>
<p>Carefully establish your current security level</p>	<p>• It can be difficult to determine exactly what level of security you already have, and in particular how it may comply with, or deviate from, an insurer's MSS. However, by making a systematic assessment using this guide, you should feel more confident in both undertaking the task and in reaching a reliable conclusion.</p>
<p>Ensure any replacement/ additional doors/windows and security devices are of good quality</p>	<p>• If buying new doors/windows or security devices, always give preference to those having independent 'certification' or 'approval' to a relevant standard.</p>
<p>Safe means of escape and good security are not incompatible</p>	<p>• Any possible conflict between the need to maintain good security whilst still permitting quick emergency escape for occupants, can be minimised by careful selection of security devices—and ensuring that any keys to them are removed and kept securely nearby, in a place where they can't be seen or reached by a person outside your home, e.g. via perimeter glazing or letter flaps.</p>
<p>You may need to seek out more information/guidance</p>	<p>• Help and advice is often available from insurers, but can also be sourced from trade and other bodies, eg the Master Locksmiths Association or Secured by Design. It may also be available from your local police crime prevention team and/or a neighbourhood watch group.</p>
<p>Routinely use all security devices to avoid being 'caught out' by intruders</p>	<p>• Opportunists taking advantage of unsecured doors/windows are the cause of many thefts from homes, so it is vital that all vulnerable doors/windows are kept secure whenever your home is unattended—even for a short time, for example when you may be in your garden.</p>

Correct fitting of the appropriate security devices is of course paramount. You can have a very good quality and high security lock, but if it's not fitted correctly then the security it provides can be seriously adversely affected.

of certain types of security devices. In all cases of query concerning Building Regulations and possible means of escape via a suitable security devices, refer to your local authority Planning/Building Control department for further advice.

8. Ensure correct fitting

New doors/windows and security devices should be fitted as per the manufacturer's advice. If this isn't readily available, then security devices should be fitted in a conventional position, ie for single point door locks, at or near the mid point of the door's opening edge, and for other devices as per the advice contained in the 'model' MSS.

In all cases of doubt, refer to a competent locksmith, eg a member of the Master Locksmiths Association (MLA).

Note

Whilst many security devices are suitable for self fitting, the wrong one fitted to the wrong door/window in the wrong way may result in poor security, and may even damage or weaken a door/window. In this regard, a particular area of difficulty can be retrofitting extra security devices to plastic doors/windows – with all their different profiles/internal construction and fittings, and sometimes also retrofitting to metal ones. As such, this is a job often best entrusted to a competent locksmith.

Get your security installed by a professional – use an MLA licensed locksmith!

The document notes the MLA as a good source of useful information.

Of course there's plenty of excellent security advice on our website too!

MLA Expo 2017 Review

MLA Expo 17 - Locksmithing industry's biggest trade exhibition proves to be "the best yet"

The Master Locksmiths Association were delighted to report record attendance at its trade exhibition for the locksmithing and physical security industry.

The bi-annual event, which was staged in October 2017 in Halls 1 & 2 of the International Centre in Telford, had a footfall of 2,309 visitors – 50.3% up on the previous expo in 2015.

In addition, 393 staff from 106 exhibitors from all over the world, including China, Russia and New Zealand were also at the event to showcase the latest security products and services, as well as having a chance to discuss industry trends and take part in training courses.

The attendance figures, provided by third party visitor registration company QRS, show that MLA Expo, which was being held for the 19th time, was not only the biggest and most successful MLA Expo since it was first held 35 years ago, but, according to some visitors is now the largest trade exhibition for the locksmithing industry in the world.

MLA Managing Director Dr Steffan George said: "We were expecting Expo to be big; having taken the step of expanding in to 2 halls we were delighted with the number of exhibitors who signed up seeing the show completely sold out. The key however is of course getting visitors there, and with 700 visitors walking through the doors within the first 3 hours of the show being open, we were ecstatic to get excellent feedback from exhibitors who couldn't believe how busy the show was.

"Joining up with our colleagues at the Auto Locksmiths Association (ALA) and creating "The Garage"; the area dedicated to auto locksmithing where all auto related suppliers were based seemed to work really well. "Class leading training continued to be available at the show and will no doubt have attracted a lot of people to visit.

Training at this year's event included safe lock picking, lock decoding and picking, social media marketing, "how to think like a burglar" (to improve surveying skills), vehicle locks & cloning, electronics, access control and abrasive wheel certification to name but a few.

"MLA Expo is a truly global exhibition involving people from

across the wider locksmithing industry, and that was proved once again. Total overseas visitor numbers almost doubled, splitting this down further, just over 90% more visitors came from Europe as did in 2015. It provides a fantastic opportunity for locksmith and security companies and professionals from around the world to come together, network and find out about the latest innovations in the industry. It is the perfect occasion for manufacturers and suppliers to showcase their products and services, network, share knowledge and make new contacts.

"Feedback from exhibitors and visitors alike was phenomenal, with a number commenting on how it had been their best show ever. This sort of feedback makes all the hard work involved in putting the show together worthwhile. We'd like to thank all the exhibitors, Expo sponsors Brisant Secure, Garage Sponsors Silca, our friends and colleagues at the ALA, all the tutors and most of all everyone who visited. We look forward to announcing details for MLA Expo '19 shortly."

3 awards were given out at the MLA Expo; Best Stand was won by APECS, Most Creative Stand was won by Burg Wächter whilst Best Product was won by Sashstop, as judged by MLA board members who are working locksmiths. Our heartfelt congratulations go to them all on their well-deserved win.

The event also saw a Gala Dinner arranged by MLA Board Member Terry Watts on the Saturday night, with a mix of a pre-dinner drinks reception, excellent food and entertainment with a great time being had by all.

The MLA's charity raffle also took place with prizes very kindly donated by Brisant Secure, Aldridge Security, ABUS, Abloy, Burton Safes and Keyprint. Thanks to them and the generosity of those in attendance £3100 was raised for the charity of choice of the event which was Cancer Research. Pictures can be found below of the prize donors getting their certificate of recognition.

Numerous Industry awards were also given out at the dinner. Firstly the ALA gave a special award to Tim Hart in recognition for all the work he put in to help with the event. Ron Cliff was next up being awarded honorary membership of the MLA thanks to his significant contribution to the association over the years. The Chubb Award and the Nigel Rose Bowl were also given out at the Gala Dinner - for more info on these two see page 35

Some Pictures from MLA Expo

Certificates of appreciation for raffle prize donations

Sid Owen was then announced as the winner of the Nigel Rose Bowl due to him having had the best BLI Exam results during the previous year. The final award was the Chubb Award; this most prestigious and well recognised award within the industry is bestowed by the board of directors of the MLA on the person they feel has done the most to further the locksmithing profession in the previous year. The recipient in 2017 was John Harding, some prize donations

IN COLLABORATION WITH

BLI Exam - Standard or Modular Coaching Route 2018

Take the BLI exam 2 ways; either all in one go, or try the MLA's Modular Coaching route

The BLI exam is arguably the best recognised exam based proof of competence in the industry. It is for this reason that it is one of the criteria for achieving the MLA's Approved Company Status

The Exam consists of 4 parts; one written (to cover general locksmith knowledge) and 3 practical (fitting a Euro Mortice lock, opening a British Standard 5 lever lock and cutting a key by hand).

There are however 2 ways of taking the BLI Exam.

The first is to blitz it all in one day; come to the MLA's head office facility and do all 4 modules in a single day. This option provides a way for those who want to minimise the amount of time spent away from work but is quite an intensive day to say the least.

The other option is the "Modular Coaching BLI Exam", which continues to prove its worth with excellent feedback from those who've taken the exam via this route.

This route was developed following the concern of the Training committee and the MLA Board members about there being a lot of very accomplished trading locksmiths who attend regional meetings, MLA Expo, Wholesalers open days etc. yet are not Members of the MLA or BLI, and that this may be through fear of the exam, not knowing what's entailed in the exam etc. It was therefore decided that in line with other institutions we would offer an alternative to the standard BLI exam. We would not only allow the exam to be taken in a modular fashion, thereby allowing people to take the elements they wanted, in the order they wanted and at the speed they felt comfortable with, but also introduced an some refresher coaching prior to each module, in order to help settle the candidates down and to point out exactly

what the invigilator was looking for in a successful pass.

Having continued to run quite a large number of these events, we're delighted to confirm that they continue to work very well, with a large take up, feedback from those doing it being particularly positive and pass rates continuing to be high (without lowering the criteria!). The main use of it has been by those locksmiths who want to pass the exam in order to become an approved company member.

To re-cap; prior to each module the candidates are settled down with a cup of tea for an informal chat and refresher instructions/demonstrations and a lecture appertaining to the module in question with some hands on practice if applicable. A full demonstration of the key making is given and good and bad examples of the lock opening and lock fitting are shown.

After which each individual module is carried out under strict exam conditions.

Two modules are completed each day, and lunch is provided. Candidates can (and indeed in this instance did) choose to only take certain elements rather than all 4 if they so wish. Those who have taken this route have felt that settling them down at the start and alleviating their nerves and knowing what we were looking for as a finished result were major factors in their success.

It has been particularly pleasing to see the number of locksmiths who have used this route to progress from personal/associated member up to approved company membership. The feedback has confirmed that it is the ideal way for experienced locksmiths, who just need a bit of "brushing up" on things, to take the exam so they can meet the qualified locksmith requirement for approved company membership.

For details on how to take the BLI exam simply contact head office on 01327 262255 or e-mail training@locksmiths.co.uk

Security related standards overview

At any given time there are approximately 30,000 standards within the UK and many more European standards being used covering a wide range of products and services. Standards are under constant review to make sure they are relevant and do not contradict each other. Standards provide the test criteria for independent test houses (such as Sold Secure) to accredit products and confirm they have been manufactured to a minimum requirement. The following overview is a breakdown of locksmith related standards (not exclusively) that people working within the industry should at least be aware of and ideally know what standards apply and when.

Standard Identification Number

BS 3621:2017

Title: Thief Resistant Lock Assembly. Key Egress

The original lock standard first drafted in the 1960's and still the base for all of the lock standards that are cross referenced in it. 3621 was intended for 5 lever mortice locks fitted to wooden doors and is intended to be used on domestic properties. The key-key application of this locking device makes it unsuitable for properties with single exits. The latest version was amended in 2012 to satisfy legal issues within the wording of the document. The UK was able to retain the following BS standards because of the GVA that was not included in BS EN 12209 and BS EN 1303 however BS 3621 was brought into line with 12209 and 1303 in 2004.

BS 8621:2017

Title: Thief Resistant Lock Assembly. Keyless Egress

Introduced in 2004, 8621 has the same test criteria as 3621 but is intended for use on locking devices that require no key to achieve egress. Single exit and multiple occupancy dwellings require keyless egress as per fire regulations. The 2012 amendments were as per 3621.

BS 10621:2017

Title: Thief Resistant Lock Assembly. Dual Mode

Introduced in 2007, 10621 also has the same test criteria as 3621 and is a hybrid of the two previous standards. 10621 locks should not be used in single exit dwellings because of the entrapment possibilities. Amendments made in 3621 and 8621 in 2012 are mirrored here.

BS EN 12209:2016

Title: Building Hardware- Locks and Latches- Mechanically Operated Locks, Latches and Locking Plates-Requirements and Test Methods

This European standard covers requirements and test methods for all types of mechanical lock or latch (including associated or separately supplied locking plates), intended for use on pedestrian doors in buildings but excludes electro-mechanically operated locks and striking plates, multi-point locks and their locking plates, locks for windows, padlocks, locks for safes, furniture locks and prison locks. This standard is in harmony with the *621 series of standards apart from the GVA that is unique to the UK.

BS EN 1303:2015

Title: Cylinders for Locks-Requirements and Test Methods

This European standard introduced in 2005 is for cylinders only. The test methods are in line with the *621 series of standards except for the GVA.

PAS 24:2016

Title: Enhanced Security Performance Requirements for Doorsets and Windows in the UK.

Adapted with input from Secure by Design, PAS 24 is intended to provide the minimum requirements for whole door sets in new build dwellings. PAS 24 takes into consideration all aspects of a door including fixings and hinges etc. The lock requirements cross reference to 3621, 8621 etc. PAS 24 was rewritten to include BS 7950 in 2012.

PAS 3621:2011

Title: Multipoint locking assemblies - Keyed egress

A family of standards that mirrors BS 3621 but for multipoint locks.

PAS 8621:2011

Title: Multipoint locking assemblies - Keyless egress

PAS 10621:2011

Title: Multipoint locking assemblies - Dual mode egress

BS EN 1125:2008

Title: Building Hardware. Panic Exit Devices Operated by a Horizontal Bar, for use on Escape Routes. Requirements and Test Methods

Experience relating to escape from buildings and general safety have made it desirable that doors at exits in public buildings, places of entertainment, shops etc., should be fitted with panic devices operated by a horizontal bar. The emphasis for products covered by this standard is on safe exit rather than security.

BS EN 179:2008

Title: Building Hardware. Emergency Exit Devices Operated by a Lever Handle or Push Pad, for use on Escape Routes. Requirements and Test Methods

This standard covers devices to be used in emergency situations where people are familiar with the emergency exit and its hardware and therefore a panic situation is most unlikely to develop. Lever handle operated escape mortice locks or push pads may therefore be used.

BS8607:2014+AI:2016

Mechanically operated push button locksets

Published in 2014 following information from Secured by Design that push button locksets were being used on some new build apartments. There are 5 levels of security that can be tested to and the highest levels (4 or 5) is intended to confirm that a push button lockset is at least as secure as a BS 3621 lock.

BS EN 12320:2012

Title: Building Hardware, Padlocks and Padlock Fittings.

This European standard specifies performance requirements and describes test methods for strength, security, functions and corrosion of padlocks and padlock fittings used in building applications, but excluding cables and chains.

Requirements which relate to security are classified in six grades, based on performance tests that simulate attack. This standard now contains an attack test with a limited tool list based on 3,5 and 10 minutes.

BS EN 14450:2017

Title: Secure storage units. Requirements, classification and methods of test for resistance to burglary. Secure safe cabinets

This European standard specifies performance requirements and describes test methods for strength and security functions of secure safe cabinets to S1 and S2.

BS EN 14846:2008

Building Hardware – Locks and Latches – Electromechanically Operated Locks and Striking Plates

BS EN 1627 – 1630: 2011

Pedestrian doorsets, windows, curtain walling, grilles and shutters. Burglar resistance.

Sold Secure

Sold Secure is an independent test house that has its own test specifications based on the standards listed (sometimes using several standards in one specification). Sold Secure has 40+ specifications that are constantly reviewed by industry stakeholders and is recognised by Police groups (ACPO), Insurers and other test houses. Some of the locksmith related specifications include:

SS 301:2008– Specification for Mechanical Security Systems for Domestic Buildings

SS 303:2013 – Specification for high Security Padlocks

SS 304:2008– Specification for Domestic Safes

SS 306: 2008 – Specification for Mechanical, Domestic Door and Window Security Systems

SS 308:2008 – Specification for Mechanical, Commercial Doors and Window Security Systems

SS 312:2015– Specification for Cylinders for Locks

A revised Diamond level that tests cylinders against snapping. Secure by Design recommend SS 312 Diamond cylinders. SS 312 is a stand alone cylinder test that improves security just by changing the cylinder.

SS 314:2009 – Specification for Security Cabinets

DHF Technical specifications

TS 003:2012

Title: Door chains and limiters

Published in 2012 this specification gives a simple pass/ fail test for loads on door chains and restrictors. It replaces a very complicated test specification that was very costly to achieve and therefore manufacturers chose not to use it. The rewrite happened in late 2012 and product should begin to be tested to it in the near future.

TS 007:2014+AI:2015

Title: Enhanced security performance requirements for replacement cylinders and or associated security furniture

A DHF technical specification that tests for security of cylinders or a combination of security handles and cylinders together. A star rated system that needs three stars for the minimum requirement can be achieved with either a three star rated cylinder or a one star rated cylinder and two star

rated handle.

TS 008:2015 +CI:2016 WORK IN HAND

Title: Enhanced security and general requirements for letter plate assemblies and slide through boxes

A totally new test. This specification provides a means of evaluation against opportunistic attack and employs human intervention testing.

TS 009:2012

Title: Enhanced security and general requirements for letter box assemblies that are free standing or surface mounted and where mail is retrieved from the same side as delivery

This is also a new test specification that provides a means of evaluation against opportunistic attack to try and prevent the contents/ letter box being removed and assess the product against potential arson attack.

TS 621:2011

Title: Thief Resistant Electromechanically Operated Lock Assemblies

A technical specification that describes performance requirements for single or multipoint thief resistant electromechanical lock assemblies including the lock interface, striking plate, fixing screws, fitting instructions and where appropriate, cylinders and protective furniture.

Other standards used for reference

BS 5357. Code of practice for installation of security glazing

MLA 2017 PR Review

In 2017, the MLA continued its successful Public Relations (PR) campaigns, promoting the benefits of MLA membership and providing security advice to businesses and the wider public alike.

Over the course of the year, our PR team reached in excess of 9.9 million people, up 32% from last year, with an independently accredited AVE value in excess of £335,860. As part of our PR strategy we have used significant news moments, such as the publication of national crime statistics to secure comment and security advice from the MLA in national and regional press. Comment from the MLA on topical issues such as the dangers of online retailers selling low cost lock picking kits, has also been secured throughout the year in titles such as the BBC, the Sun and the Times.

We continue to spread the word of the MLA to the business community and individual professions and have targeted a number of specialist audiences over the course of the year, including facilities management, education, farming and agriculture, equestrian, retail and commercial businesses. In-depth advisory articles, often authored on behalf of the MLA, have appeared in titles including FMUK (Facilities Management UK), Professional Heating & Plumbing magazine, Professional Builder, Professional Building Merchant, Electrical Trade magazine, Building for Education and Independent Education Today.

We have continued to communicate with home owners and landlords through regional and national press. Articles featured in well-known papers including The Yorkshire Post, the Sheffield Telegraph, The Press & Journal and The Telegraph & Argus, Burton Mail and consumer magazine such as titles Real Homes.

Each month we have issued an advisory column tailored to suit the time of year or a particular event, for example, providing security advice to householders on how they can upgrade their security over the summer months, top tips for safeguarding buildings over the Christmas period and security advice for carers on safeguarding the homes of relatives and loved ones to coincide with Carers week. One such advice piece on security guidance for Carers was secured in Yours magazine, with a readership of over 255,000.

Over the year the PR team has also worked closely with online estate agents, insurance and consumer advice titles such as LV= to secure advisory blog-post style articles from the MLA. One such article in uSwitch had a readership of over 827,000.

Every article published includes details of where you could find an MLA accredited locksmith and highlights the benefits of using an MLA approved member.

Looking ahead, there is lots of planned activity in the pipeline to ensure we continue to highlight the benefits of MLA membership, raise awareness of the importance of using MLA accredited locksmiths and help tackle topical security issues facing the industry in the year ahead - 2018 promises to be an exciting year!

How to keep your home and secure this sun

By Paula Oldfield
paula.oldfield@thelocal.co.uk
01234 123456

As the summer holiday approaches and temperatures rise, many families in Burton and South Derbyshire will be looking forward to a carefree getaway.

However, leaving your home unoccupied for so long is a concern for many homeowners.

Shockingly, there was an estimated 485,000 cases of domestic burglary reported across the country last year.

A leading locksmith company has issued advice to homeowners in the area on how to keep their homes safe and secure when going away on holiday in the coming weeks and months.

With 529 reports of theft being recorded in Burton between January 2016 and January 2017, the Master Locksmiths Association (MLA) has shared top tips on how to safeguard your home from burglars when embarking on a much-needed summer vacation.

Homeowners are encouraged to check all doors and windows are securely locked and all locks are fitted and functioning - a necessary requirement for claiming insurance.

Store all valuables, such as jewellery, tablets and other gadgets which could attract an opportunistic thief, out of sight.

Better still, lock them in a professionally specified and installed safe.

Timed outdoor lighting can

Top tips on keeping out thieves

With the welcoming of a new year comes a chance to drop bad habits and reflect upon your choices for the year ahead. Many will focus on health, happiness and ambitions but one resolution that should be on top of everyone's list is how to improve their home security.

To kick-start this, the Master Locksmiths Association (MLA) has issued a few useful tips which will help to keep you, your family and your home safe throughout 2018 and beyond.

Make sure it looks like someone is in. During the working week a lot of houses are easy targets for burglars. Use simple (and free) devices such as timer lights or a fake TV so your property appears occupied at all times.

Always ensure your house is properly secured and all doors and windows are locked. Take time to review your locks. Have they been changed since you moved in? Are they up to insurance standard and correctly fitted and functioning?

Secure your letterbox.

the lock), and consider getting a letterbox cover or letter lock fitted to restrict any unwanted access.

- Secure your keys. If you have a so called "keyless" vehicle, i.e. one where you don't physically use a key to open and start it, then consider storing your keys in a specially protected bag or box (acting as a Faraday Cage) so as to not enable thieves to capture the signal from outside and be able to steal your vehicle.
- Out of sight, is out of mind. If you haven't drawn your curtains or blinds then remember your possessions are on display for the world to see.
- Keep on top of things. Home maintenance is vital - any kind of rubbish-disposal like broken window frames, rusty locks, damaged garden gates and cracked panes of glass all act as red flags to thieves.

The MLA is recognised as the authoritative body for locksmithing by the police and all of our members undergo strict vetting, including criminal record checks.

Keeping loved ones safe and secure

Two million people aged 75 and over live alone in the UK, according to an Age UK report, and home security is something which worries carers a great deal - especially if they are caring from a distance.

The Master Locksmiths Association wants to raise awareness among carers about the need to balance security with safety for vulnerable homeowners.

In Stafford George, managing director of the Master Locksmiths Association, says it's important to ensure a vulnerable person is safe and secure in their home if they are unable to answer the door, but also that access can still be gained in an emergency and on a day-to-day basis.

Make security user-friendly - those with impaired strength or eyesight problems may struggle with locking up or using handles. Key barriers - plastic handles designed to attach to a key at one end and a rubber handle at the other - provide a better grip. Remote locking, similar to a car's central locking system, allows people to secure their property from a distance.

Dr Stefan George, of the Master Locksmiths Association, who has issued advice to householders.

Spate of burglaries sparks new warning

Unlucky 13
hotlist for 1
Greenford ranks high in

A LOCKSMITH has issued advice to homeowners after Greenford was named the 13th most popular burglary spot in the UK.

The area in Ealing recorded a spike in burglaries between last year and 2016, according to a report by the Home Office.

Dr Stefan George, for the MLA, said: "It takes us to all to lock at your current risk level where you can apply a few changes to improve your home."

"The issue is rarely at the top of the list but some simple changes can make a big difference in preventing a burglary. When the house is

Secure your letterbox.

CARERS IN TOUCH

Beloved engineer Arthur Watson has very special memories of his diamond wedding party but sadly, diversity afterwards.

His much-loved wife, Betty, died.

Now when Arthur is feeling low, he looks back at the day when he and Betty celebrated 60 years of marriage and remembers the happy times they shared.

Arthur recently joined the Yours Forget Me Not group and says the support of family and friends have helped him to face life again.

Arthur, who has one daughter and two grandchildren, says he "talks" to Betty's photo every day. "I keep myself busy and find that talking to other people who understand my feelings really helps," he says.

You can join too...

Carers in Touch and the Forget Me Not Group for those who have lost a loved one, are free to join. Write to Rose Social, Yours, Media House, Lynchwood, Peterborough, PE2 6EA. Email: carersinfo@yoursmedia.co.uk

Please include your full name and address (and email if you have one), a few personal details about your situation, family interests and a contact telephone number and I will be in touch soon.

MLA Promotion

The MLA has helped people in UK feel safer in their homes for 60 years this year. By promoting the vetted, inspected and qualified locksmiths from the industry who agree with the motto of "Skill and Integrity", the merits of the association have been recognised by authorities such as the Police, Insurers, Neighbourhood Watch, governmental websites, training websites and many others.

Over the past few years, The MLA has enjoyed recommendations from all of the above, a fact that strengthens our credibility and capabilities.

The authorities' guidance regarding the use of locksmiths was summed up as follows: if you need a locksmith that is well trained, trustworthy and capable to do the job, then Master Locksmith Association will be the place to go to.

MLA recommended by Police

What do the Police and MLA have in common? Both work towards offering people across UK the feeling of safety and security, therefore our association is highly recommended on the authorities' websites in articles related to crime and theft reduction:

Police Scotland:

Secure your Home

- Consult the manufacturer/supplier before attempting to fit any extra locks to double glazed windows or doors.
- Windows should have internal beading to avoid the glass being removed from the outside. Some systems which have external beading are secure because the glass is adhered to the frame or secured by special tamper-proof clips. This can be checked by consulting the manufacturer.
- New / replacement windows should be manufactured and installed to PAS 024:2016 or equivalent, which indicates set specific standards of design and security for windows.

Don't let thieves steal the spring in your step

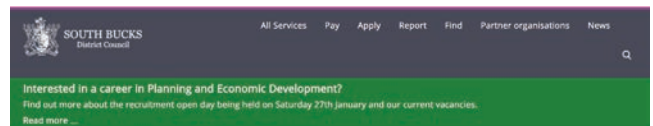

Published Tuesday, 9th May 2017

Most importantly, check whether you have secure locks on your external doors. If you haven't asked for specific safety measures on your locks, it is likely you will have the most common lock, the euro cylinder lock, which is vulnerable to burglaries. No matter how expensive your door is or how many locking points there are, criminals can still enter your property by breaking or snapping the lock.

For little cost, you can change your lock to a snap and bump safe lock to increase your home's security. Ask for the TS007 lock. If you are unsure about what type of lock you have, [contact an approved locksmith](#) or the door manufacturer or supplier.

Chubb Award & Nigel Rose Bowl 2017

MLA Awards

2017 saw the MLA's awards presented at the Gala Dinner at MLA Expo in Telford.

Firstly the Chubb Award.

This most prestigious and well recognised award within the industry, is bestowed by the board of directors of the MLA on the person they feel has done the most to further the locksmithing profession in the previous year. The recipient in 2017 was John Harding, someone who has not only served time on the boards of both the MLA and Sold Secure, but is also an MLA inspector and also the tutor for our Abrasive Wheels course. Pictured below is John being presented his award by MLA Chairman Roger Barratt.

Then there was the Nigel Rose Bowl.

This award is for the person with the highest marks in the BLI exam. This year saw Sid Owen of S O Safe Services in Worthing win the coveted prize.

The photo below shows the award being handed over to the well deserving Sid by Nigel Rose himself.

Congratulations to them both from all of us at the MLA.

Licensing the Professional Locksmith

The Master Locksmiths Association (MLA) is the leading Trade Association for the locksmithing industry.

In the absence of Government based licensing (meaning that anyone can call themselves a locksmith), the MLA can provide you with peace of mind through it's licensing scheme.

MLA licensed locksmith companies, who undergo strict vetting (including criminal record checks, regular inspections to ensure quality etc), are able to provide advice based on knowledge and experience, recommend products that are fit for purpose as well as provide professional installation and maintenance services.

The key to your security needs.

Find your nearest MLA approved locksmith by contacting the Association:

Tel: **0800 783 1498** · Fax: **01327 262539**

Web: **www.locksmiths.co.uk**

E-mail: **enquiries@locksmiths.co.uk**

The benefits of using an MLA licensed locksmith

- Leading Trade Association for the locksmithing industry
 - Not-for-profit organisation
 - Established over 50 years ago
 - Nationwide Membership
 - Promotes standards of conduct, practice and materials within locksmithing
 - Provides peace of mind to the end customer through it's licensing scheme, in the absence of Government based licensing
 - Following a change to the law on the vetting of locksmiths implemented thanks to a campaign by the MLA, the only way for locksmiths to get standard Criminal Record disclosures is via Master Locksmiths Association membership
 - Various discounts available from participating MLA members (see website homepage for more information)
 - Standards are kept high by employment of qualified locksmiths, strict vetting and regular inspections. Training is also provided by the Association to ensure members are constantly up to date with the latest industry developments
 - Recognised as the authoritative body for locksmithing by:
 - Police
 - Home Office
 - British Standards Institute (BSI)
 - RISC Authority (formerly IPCRes, the UK property insurers' technical group)
 - Building Research Establishment (BRE)
 - MLA licensed locksmith companies are able to provide:
 - Advice based on knowledge and experience
 - Recommend products that are fit for purpose
 - Provide professional installation and maintenance services
 - A pricing policy to ensure fair and transparent prices are quoted before work commences
 - Channels of arbitration exist to fully investigate any complaints or disputes, should they arise, and the MLA advises or takes any necessary action depending on the outcome
 - Look out for the MLA Approved Company Logo
- Visit www.locksmiths.co.uk or call **0800 783 1498** to find out the details of your nearest MLA licensed locksmith.

Sold Secure, one of the leading suppliers of test and certification services for security related products, is delighted to sponsor this leaflet. Working with companies world-wide, we assess products to see whether strict performance criteria are met and where applicable allow the use of the coveted Sold Secure approved logo. When choosing your security products be sure to ask your MLA licensed locksmith if there is a Sold Secure approved product suitable for your particular needs.

I. ACKNOWLEDGEMENTS

The Master Locksmiths Association is grateful to the following organisations for their support and assistance in drawing up the original guidelines:

- Association of Chief Police Officers (ACPO) (Project & Design Group-Technical Committee)
- British Hardware Federation
- Builders' Merchants Federation (BMF)
- Chief Fire Officers Association (CFOA)
- Door and Hardware Federation (incorporating Door and Shutter Manufacturer's Association and Association of Building Hardware Manufacturers).
- Glass and Glazing Federation (GGF)
- Guild of Architectural Ironmongers (GAI)
- Home Office Scientific Development Branch (HOSDB)
- RISC Authority (UK insurers technical advice body)
- Lloyds
- Sold Secure (part of MLA Group)

Note: These Guidelines give a general description of security for domestic buildings. Neither the guidelines nor the list guarantees that these methods are suitable for specific applications. It is the responsibility of the equipment supplier and/or equipment purchaser to ensure that any system is suitable for its particular application and that it complies with all legislation, standards, codes of practice or any other requirement.

Every effort has been made to ensure the contents of these Guidelines are accurate, however the Master Locksmiths Association does not accept any responsibility for loss arising from decisions based upon them.

I. INTRODUCTION

Theft from domestic property causes major problems for the Insurance industry and for specifiers of security products who might not be familiar with the industries involved. The reasons for these guidelines are:

- the Insurers possible requirement on a policy holder to maintain a minimum level of security to protect their premises, to use it when the premises are unattended or in part when they are occupied.
- the general obligation of householders to take reasonable security precautions for their own good.
- to provide easily understood information for the use of those not familiar with the Security or Insurance industries.

These guidelines are not intended to be applied to new construction or major refurbishment. For these applications PAS 24:2016 Enhanced security performance requirements for doorsets and windows in the UK (the latest version of PAS 24 includes the requirements of BS 7950) apply. These specifications are based on complete doorsets and window assemblies i.e. the door or window, including frame, hinges, locks, and fixings as a whole unit. The specifier is recommended to obtain doors and windows certified to these specifications.

Further guidance is given in BS 8220-1: Guide for security of buildings against crime – Part 1:2000 - Dwellings

Currently European specifications EN 1627-1630 also exist for the security of doors, windows and shutters. Products certified to the appropriate grades of these specifications are equally suitable.

These Guidelines assume that occupants are all able bodied. For users with disabilities, seek professional guidance before any installation.

Every attempt is made in these guidelines to be as practical as possible with recommendation or the specification of products, but there will always be occasions where alternatives will need to be sought because of the nature of a particular design, size or other feature of a door or window to be secured. In these circumstances the advice of a specialist in this field should be taken. A member of the Trade Division of The Master Locksmiths Association (denoted as "MLA approved company" and accompanied by the MLA registration number) should be contacted for such advice which should then be checked with the Insurers where applicable.

To comply with the requirements of most Insurers for thief resistant lock assemblies that necessitate the use of a key for egress, it is generally accepted that locks used on traditional external timber doors are certified to BS 3621:2007+A2:2012 Thief resistant lock assemblies – Key Egress. This indicates that the lock is part of an on-going test and audit programme to show it meets the requirements.

The MLA recommends that locks conforming to the latest version of any standard are to be used, however the MLA also recognises that insurers will on occasion accept locks, already installed that conform to earlier versions.

Where there is a requirement for means of escape (from fire) from the inside without the use of a key while maintaining security from the outside, lock assemblies to BS 8621:2007+A2:2012 Thief resistant lock assemblies – Keyless Egress should be installed.

Certifying to BS 8621 commenced in April 2005 and lock assemblies certified as complying with this Standard are listed within the links in Appendix C.

The introduction of new materials (e.g. Aluminium, PVC-U

and Composite Materials) and designs used in the construction of doors and windows can make single point locking inadequate. The locks designed for these types of door are usually multi-point and therefore cannot be tested to BS 3621, BS 8621 or BS 10621. PAS 3621, PAS 8621 and PAS 10621. Locks produced prior to this date should have a minimum of three locking points and use a cylinder that meets the minimum requirement stated in 3 (b).

Nothing in this document or related documents shall imply that the installation of any security device will prevent unauthorised entry to a premise or that by following these guidelines insurers are obliged to issue insurance cover.

2. GENERAL CONSIDERATIONS

When considering the matter of minimum security requirements and the interpretation of these guidelines, users of these guidelines should be mindful of a number of factors:

(a) The adequacy of the door or window, frame thickness and the material quality together with the fixings of the frames to the surrounding structure might impact on the level of security provided.

(b) A degree of flexibility when imposing security requirements might, on occasions be necessary. Often, due to the nature of the door or window construction, or the material from which it is constructed, it might require the use of locks or locking devices in situations other than that for which they were intended. In such circumstances the advice of a Trade member of the Master Locksmiths Association should be sought, and written confirmation of their proposals obtained from any interested insurer.

(c) If improvements are required to the security of aluminium, PVC-U or composite material doors or windows it is stressed that this work should be undertaken by professionals. Again advice must be sought from an Approved Company Member of the Master Locksmiths Association who has experience in this type of work. Care should be taken not to breach manufacturers' warranties that might still apply.

(d) It must also be appreciated that some locks not certified to BS 3621 have in the past and could in the future be accepted by Insurers. Where this is the case, written confirmation by the Insurers of their acceptance of the product for its intended use should be obtained by the end-user. This recommendation also applies with the introduction of lock assemblies under BS 8621 and BS 10621.

(e) Insurers and specifiers should be mindful of possible conflict between occupier safety and security when the property is occupied. Careful consideration must be given to the means of escape in the event of fire before specifying that locks should be engaged and the keys removed (using BS 3621:2007+A2:2012 specification) before retiring for the

night. Keys should be kept within easy reach of the occupant, but out of reach of an intruder.

If in doubt, consult any interested insurer and the local Fire Prevention Officer for guidance.

(f) External doors that are deemed to be used as an exit in case of an emergency should be locked in the manner specified for the final exit door, with the addition of a nightlatch that can be opened from the inside without the use of a key for use when the property is occupied. Where locks to BS 8621:2007+A2 :2012 are fitted, egress will be facilitated from the inside by the presence of the thumb turn.

(g) In blocks of flats and other buildings of multiple occupancy, the means of escape in the event of fire is an important consideration, particularly where the entrance door to the individual flat is the only means of escape. The use of Escape Locks that can be opened from the inside by a single action without the use of a key (but still retain their security from outside as described in BS 8621) is acceptable to Insurers subject to written confirmation. This type of lock will normally meet the requirements of the Building Regulations.

(h) New products may become available that conform to test procedures for security products, and carry the appropriate certification mark. When these are accepted by the organisations supporting these guidelines, and where suitable for the protection of a particular risk, their use should be encouraged.

(i) When making recommendations for the fitting of security items, consideration must be given to the type of risk involved relevant to the location of the premises. It will be necessary to increase the number of locks and fittings to doors and windows in high-risk areas. Advice should be sought from the local Crime Prevention Design Adviser, Architectural Liaison Officer, any interested insurer involved or an Approved Company Member of the Master Locksmiths Association.

(j) A list of Approved Company Members of the Master Locksmiths Association, recognisable by the logo "MLA Approved Company" is available from the Master Locksmiths Association. This list is also reproduced and updated on our website www.locksmiths.co.uk

3. MINIMUM SECURITY REQUIREMENTS

(a) Locks currently available certified to British Standard BS 3621, BS 8621 or BS 10621 should bear the standard number and the mark of the certification agency. These are listed in the web links in Appendix C. Such locks may be available in rim or mortice fixing. Locks for PVC-U and composite doors (when multi-point) should meet the minimum requirement set out in PAS 3621, PAS 8621 and PAS 10621 published in 2011. Locks produced prior to this date should have at least three locking points and be combined with a cylinder that meets the requirements of

3(b). Locks that have been part of a PAS 24 door test are also acceptable. Written agreement for the acceptance of such locks should be obtained from the insurer by the policyholder.

(b) Lock cylinders installed before the implementation of these guidelines (November 1999) should have a minimum of five pins and an anti-drill insert. Thereafter, as a minimum requirement the cylinder shall meet the requirements of BS EN 1303:2015. Clause 6.8 Key related security Grade 5 (Table 9) and Clause 6.9 Attack resistance Grade 2 (Table 10). BS EN 1303:2015 was published in July 2015 and tested cylinders will begin to be marked with this date. Technical specifications SS 312 and TS 007 were published in 2010 and 2011 and are to be used when doors are at risk of cylinder attack and may be a requirement by some authorities. Cylinders that are Sold Secure Diamond rated have been subject to an extensive attack test and offer a significant security upgrade to any door that requires a Euro cylinder. The Master Locksmiths Association recommends that for retro fit security upgrades, SS312 Diamond cylinders should be used as a cylinder change only solution or a TS 007 one star rated cylinder combined with a two star rated handle or a TS 007 three star rated cylinder (either TS 007 solution must achieve a total of three stars to be effective against attack).

(c) Where any cylinder operated lock is used, the outside cylinder shall not protrude more than 3 mm from the face of the door or the lock furniture (handle plate or cylinder rose) where fitted. Lock furniture should be of the 'bolt through' type with the fixings being secured from the internal side only. Lock furniture should comply with BS EN 1906 Lever handles and knob furniture – Requirements and test methods – Annex A: Requirements for security lock furniture for use on burglary resistant doors – Grade 1 unless certified as a component of a door assembly satisfactorily tested to PAS 24. Lock furniture may consist of separate components of lever/knob handles on roses and cylinder roses or composite backplates. Where cylinder roses are fitted, these must provide the cylinder protection as required under BS 3621, BS 8621 or BS 10621.

(d) A limited range of other door locks, and most types of lockable bolt or window locks, are likely to be acceptable to insurers for the purpose of securing doors and windows. A proposed (issued in 2013) guidance document on Minimum Security Standards for Domestic Properties will provide full details. This will be available for download from www.riscauthority.co.uk

4. HINGED DOOR SECURITY

The type of lock and the position to which it is fitted on the door is dictated by the design of the door. It is therefore not possible to make specific recommendations regarding the fixing positions of additional security devices, as this will be determined by the position of the original fittings on the door. The height at which the lock is fitted might also be determined by the level at which the user is standing when

locking or unlocking the door, e.g. one or two steps below the door entry level.

For specific guidance reference should be made to BS 8220 Guide for security of buildings against crime – Part 1:200 Dwellings. However, the following is offered as a general guide:

4.1 Additional Mortice Deadlocks

Where the lock to be fitted is of the mortice type, the minimum thickness of the door to which it is being fitted must be 44 mm. The lock should be fitted approximately midway between the existing lock and the top or bottom of the door depending on which has the greatest unsecured distance, avoiding any cross rail or glazing bar joints.

4.2 Additional Mortice or Rim Security Bolts (Single Doors)

To be fitted horizontally (where possible) approximately midway between the top lock and the top of the door and the bottom lock and the bottom of the door.

Where a single lock conforming to the requirements of the insurance company is fitted, the additional bolts should be fitted approximately midway between it and the top and the bottom of the door.

Where bolts are fitted vertically they should be between 50 mm and 100 mm from the edge of the door, avoiding any joints.

For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts. Where doors do not form part of an escape route, loose key mortice bolts are suitable

4.3 Additional Mortice or Rim Security Bolts (Double Doors)

To be fitted vertically to the top and bottom of the doors between 50 mm and 100 mm from the front of the rebated edge of the door, avoiding any joints. It could be necessary to fit security bolts to the top and bottom of the first closing leaf only, if the doors are of substantial construction.

For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts on the first opening leaf, the first closing leaf being secured by loose key bolts. Where doors do not form part of an escape route loose key mortice bolts are suitable for both leaves.

4.4 Hinge Bolts and Security Hinges

Hinge bolts shall be fitted to all outward opening doors at a position of approximately a quarter of the door height from the top and bottom of the door, but not within 150 mm of the top or bottom hinges.

Hinges for use on burglar-resistant doors should comply with BS EN 1935:2002 Annex C. These may comprise either such a design that the hinge pin can only be removed when

the door is open, or alternatively, suitable composite security hinges incorporating hinge bolts within the hinge flap that enable the hinge to withstand shear loads should be considered.

4.5 Letter plates and boxes

Letter plates fitted to doors could comply with BS EN 13724: Postal services. Secure letter plates and boxes can be tested to TS 008: 2012 and TS 009: 2012. TS 008 is quoted in PAS 24 and prevents invasive attack such as fishing.

4.6 Stable Doors

Both halves of stable doors must be treated as separate doors.

5. WINDOW LOCKS

Where windows are not required to be opened, they may be screwed permanently shut. Security screws shall be used where this is to be done from the outside, and the heads countersunk and plugged.

The security of all ground floor and all accessible windows which are not considered as means of escape (e.g. from a flat roof) shall be considered. Openable windows that are over 600 mm high or wide should be fitted with a multi-point locking system or two window locks with removable keys. Sashes less than 600 mm need only be fitted with a single lock.

Where a lock is to be fitted to a window care must be taken to ensure that the material to which the lock is fitted does not become weakened by fitting it too close to existing fittings.

Where a window is required for emergency egress then it shall not be fitted with any type of key lockable system. In this instance the window should be fitted with laminated glass.

5.1 Louvre windows

Urgent consideration should be given to replacing louvre windows as it is difficult to achieve adequate security. If this is not possible, then all panes of glass (in louvre windows) should be securely fixed, with suitable adhesive, into their brackets or suitable grilles, bars, or shutters fitted. Louvre windows should not be installed in vulnerable locations. The use of plastic frame materials is not acceptable for a security application

5.2 Casement Windows

Where the casement window opening exceeds 600 mm, two locks are required. For side-hung casements windows over 600 mm high the additional locks should be fitted approximately quarter of the height from the top and bottom of the casement window. For top-or bottom-hung fanlights in excess of 600 mm wide, the locks should be fitted approximately one quarter of the width of the opening fanlight from either side of the sash.

6 Good Reasons To Select

ISEO®

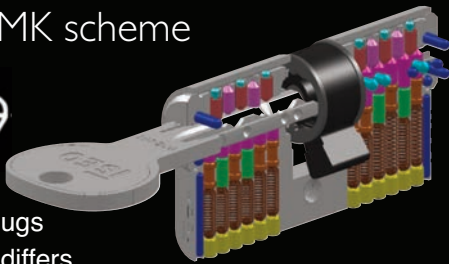

- 1 Respected & Established Brand
- 2 European Manufacturer
- 3 Certified Kite Mark** Assurance (**F6 Extra, R11, R50)
- 4 Comprehensive Ranges
- 5 Serviceable Parts Available
- 6 Competitive Pricing

For the larger MK scheme

R11

- 11 pins
- Brass body and plugs
- over 1 million key differs
- Stainless steel pins and brass pick resistant drivers
- Drill resistant pin in cylinder body and plug
- Nickel silver keys
- Available KD, KA & MK

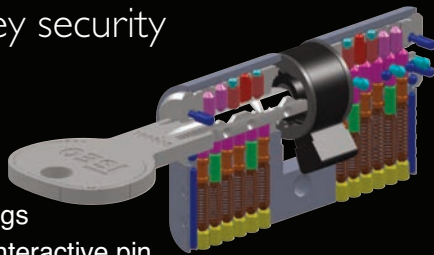

For patented key security

R50

- 11 pins
- Brass body and plugs
- Patented key and interactive pin
- Stainless steel pins and brass pick resistant drivers
- Drill resistant pin in cylinder body and plug
- Nickel silver keys
- Available KD, KA & MK

For a versatile solution on panic exits

ISEO PANIC HARDWARE

- CE marked
- Easy to install
- Fully reversible
- No exposed moving rods or linkages
- Attractive design with rounded edges for safer usage
- External access devices* are supplied with cylinder

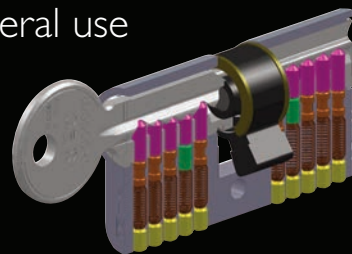

*External access devices sold separately.

*External devices are compatible with most Euro single 3010 cylinders

For everyday general use

F5

- 5 pins
- Brass body and plugs
- Sintered Steel cam
- Brass pins and pick resistant drivers
- Phosphor bronze driver springs
- Nickel plated brass keys
- Available KD, KA & MK

For everyday key security

R6

- 6 pins
- Brass body and plugs
- Stainless steel driver pins
- Stainless steel pins and brass pick resistant drivers
- Drill resistant pin in cylinder body
- Nickel plated brass keys
- Available KD, KA & MK

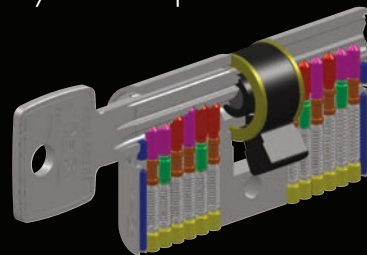

For excellent security & bump resistance

F6+

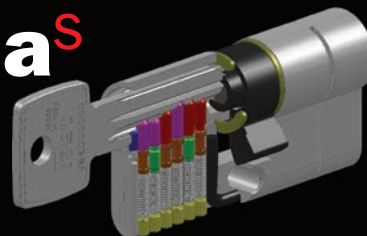

- 6 pins
- Brass body and plugs
- Bump resistant
- Anti-drill protection
- Brass pins and pick resistant drivers
- Nickel plated brass keys
- Available KD, KA & MK

For enhanced security & bump resistance

F6 Extra^S

- 6 pins
- Brass body and plugs
- Bump resistant
- Anti-drill protection and sacrificial break slot
- Brass pins and pick resistant drivers
- Nickel plated brass keys
- Available KD, KA & MK

5.3 Tilt/Turn Windows

Additional locks should be fitted to the bottom rail at the leading edge for security and also to prevent the accidental opening of the window in the side hung mode.

5.4 Vertical Sliding Sash Windows

Where the window opening exceeds 600 mm, the locks should be fitted on the meeting rail of the bottom sash, at approximately one quarter of the width, or on the vertical frame either side of the upper sash, directly above the meeting rail of the bottom sash.

Where there is a requirement for ventilation when the premises are occupied, vertical sliding sash windows can be provided with restricting devices suitably placed to provide a ventilation position, to allow them to be opened a maximum of 100 mm and remain secure. This is not recommended when the premises are unoccupied. The window should then be secured in the fully closed position.

6. SLIDING DOORS AND WINDOWS

All sliding doors and windows should be fitted with anti-lift devices to prevent them being removed from their tracks. Care should be taken to ensure such devices are fitted appropriately so that they do not go inside the section of the frame when the door/window is closed. Some sliding door locks have an in-built facility to prevent the door being lifted, e.g. swing hook bolts which rotate upwards to engage.

Additional locks fitted to sliding doors and windows should be fitted in such a manner as to ensure any force applied to open the door acts against the lock fixing screws.

Wherever possible, additional locks should be fitted to the top and bottom of the interlock of sliding doors and windows. However, there are some designs, which make this impractical.

Sliding doors/windows should not be secured in the ventilation position when the premises are unoccupied.

7. UP-AND-OVER DOORS

Work on improving the security of up-and-over doors should be undertaken by professionals who have experience in this type of work.

There are security locking products available for this type of door and the advice of a professional (MLA Trade Member) should be obtained prior to commencing improvements.

8. FRAME FIXING

It could be necessary in some instances to improve the strength of the fixings holding door or window frames to the fabric of the building. Due to the presence of pre-cast concrete, steel lintels or other construction details, it might not be possible to achieve the desired additional fixings to the head or sill of the frame. The type of fixings used will be determined by the material to be fixed and the material to which it is to be fixed, however frame-fixing screws and bolts

are available for this purpose.

The following dimensions for the positions of additional fixings are offered as a guide.

8.1 Corner Fixings

Additional fixings made between 150 mm and 250 mm vertically and horizontally from the internal corners of the frame to be fixed.

8.2 Vertical and Horizontal Fixings

Additional fixings made at approximately 600 mm centres between the corner fixings of the frame to be fixed.

For greater detail of improved fixings, reference should be made to BS 8213: Part 4:2016 Windows, doors and roof lights – Code of practice for the installation of replacement windows and doorsets in dwellings

9. GLASS AND GLAZING

As far as security is concerned the main consideration is the ease with which glass can be broken to provide access to window or door hardware. The glazing specification chosen should meet the design and performance requirements of BS 6262:2005 Part 4 Glazing in buildings – Safety related to human impact. For those installations where a higher degree of “security” is needed the glazing should be in accordance with BS 5357 Code of practice for installation of security glazing

There are three main types of glass. These are:

9.1 Annealed glass

Annealed glass consists of, float, sheet, cast (patterns) and wired glass. It breaks easily and when broken forms large sharp fragments. While wired glass can be fractured, it will act as a barrier but only until the wire mesh in the glass is sheared.

The application of an appropriate plastics film can increase the resistance of annealed glass to penetration

9.2 Toughened glass

Toughened glass, (tempered glass), is an annealed glass, except wired glass, that has been subjected to a heating and rapid cooling process that imparts a greater strength to the material. It is resistant to impact by blunt objects but can be fractured by penetration of the surface compressive layer. When fractured, the glass will not act as a barrier. In buildings it is usually found in ‘risk areas’ which include doors and adjacent windows, low windows, bathrooms, landings etc. Typically toughened glass is around eight times stronger than annealed glass but when it breaks it forms a multitude of small fragments. It is also vulnerable to breakage with a sharp point such as a centre punch.

Due to the method in which it breaks, toughened glass offers very little security. Its value is as a safety glass.

9.3 Laminated glass

Laminated glass consists of two or more layers of annealed glass bonded together by means of transparent plastic (poly vinyl butate - PVB) interlayers. When the glass is attacked the glass layers fracture but remain in place, held by the PVB interlayer. Thus laminated glass offers both increased security and safety over annealed glass. Typical laminated glass found in domestic buildings consists of two layers of glass and one interlayer to a total thickness of 6.4 mm (soon to increase to 6.8 mm). However, the number of glass layers and interlayers can be increased to provide enhanced security such that, eventually, bullet-proof glass can be produced.

The most common failure mechanism of laminated glass is for it to 'balloon' and fall out of the frame under repeated impacts. However, the time taken for this gives an enhanced level of security over other types of glass

9.4 Double glazing

Double glazing can be in the form of:-

1. Insulating glass units i.e. two or more panes of glass hermetically sealed at their perimeter. These provide the intruder with two or more panes to break

2. Double windows i.e. two separate single glazed windows in the same opening. These assemblies provide a similar deterrent but only if the inner window is secured.

9.5 Plastics glazing material

Plastics glazing sheet material consists of either a single sheet or combination of sheets laminated together. The performance of these materials is dependent on the polymer type, thickness, and support condition. The advice of the manufacturer should be sought in respect of their security and fire resistance performance, as appropriate.

9.6 Glazing

All glass or plastics glazing sheet material should be secured to the window or door structure in such a manner that it cannot be easily removed from the outside.

10. GLOSSARY

Anti-lift device. Device which prevents a door or window from being lifted in its aperture, where this lifting would decrease the effectiveness of a lock or enable the door/window to be removed.

Barrel bolt. Surface mounted fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening. The shoot is provided with a knob, loose key or similar for operation by hand.

Bolt (1). Movable part of a lock or latch that usually engages a component fixed to a frame and is withdrawn into the case,

Bolt (2). Fastener with a sliding part that is usually manually controlled and that secures a movable component to its

frame or opening, the sliding part being provided with a knob, loose key or similar for operation. It may be surface mounted, or morticed.

Certified. A product subjected to a testing and ongoing audit programme by a MLA approved organisation.

Deadlock. Lock that contains only a deadbolt

Escape lock. Deadlock that can be opened (even when locked) from the inside by a single action without use of a key.

Escutcheon. Surround with a shaped hole, with or without a pivoted cover plate, primarily to protect the door leaf from abrasion damage caused by key insertion. This could be for decorative purposes or to increase the security of the locking device.

Flush bolt. Recessed (flush) fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the moving part being provided with a lever, slide bar or knob.

Hasp and staple Two-piece fastening for doors which can be secured by a padlock. The hasp could be attached to a fixed or swivel bar.

Hinge bolt. Fixed projection on the hinge side of the door or window. The projection engages into a keep when the door or window is closed. Also known as dog bolt

Latch. Self-engaging device, usually operable from both sides, which holds a door or window in the closed position and is released by hand without the use of a key.

Lock. Fastener that combines within one case a latch operated by a handle and a deadbolt which secures the door or window in the closed position

Mortice lock/bolt. Lock/bolt where its body is fitted in a mortice cut into the closing edge of the door or window.

Multi-point lock. Lock that has a latch bolt and a number of other bolts positioned remote from the lock case but connected by rods, which are thrown by means of a single action.

Night latch. Latch with a single bevel latch bolt that is operated internally by a knob and externally by a key which automatically engages when the door is shut.

Night vent or ventilation position. Position in which the door or window can be secured whilst slightly ajar. This usually offers only limited security.

Padbar A device spanning the full width of the door opening with supporting brackets or staples fixed to the frame and secured by a padlock

Padbolt/padlock bolt. Door bolt which can be secured in the

locked position by means of a padlock.

Rim lock/bolt. Lock/bolt for fixing on the face of a door or window.

Security bolt. Mortice or barrel bolt which can only be withdrawn by the use of a key.

Security screw. Screw designed so that it either cannot be removed when fixed or which requires a restricted access tool to remove it.

Strike plate. Flat metal plate, appropriate to the latch or lock, fixed to a frame to engage a bolt(s).

Throw - bolts with linear movement - Distance that the dead bolt travels from the fore end of the lock in an outward direction under the action of a key, measured perpendicular to the fore end.

Throw - hook bolts with arcuate movement. - Distance from the tip of the bolt travels from the unlocked to the locked position measured parallel to the fore end of the lock.

11. STANDARDS

The following standards are referred to in the text. The latest version of the standard shall be used.

BS 3621. Thief resistant lock assemblies – Key egress.

BS 5357. Code of practice for installation of security glazing.

BS 5544. Specification for anti-bandit glazing (glazing resistant to manual attack).

BS 6206. Specification for impact performance requirements for flat safety glass and safety plastics for use in buildings.

BS 6262. Part 4 Glazing in buildings – Safety related to human impact.

BS 7950. Specification for enhanced security performance of casement and tilt/turn windows for domestic applications.

BS 8213-4. Windows, doors and roof lights Part 4. Code of practice for the installation of replacement windows and doorsets in dwellings.

BS 8220-1. Guide for security of buildings against crime – Part 1. Dwellings.

BS 8621. Thief resistant lock assemblies – Keyless egress.

BS 10621. Thief resistant lock assemblies – Dual mode.

PAS 24. Enhanced security performance requirements for doorsets and windows in the UK.

PAS 3621. Multi point locking assemblies – keyed egress.

PAS 8621. Multi point locking assemblies – keyless egress.

PAS 10621. Multi point locking assemblies – dual mode.

BS EN 12209. Building hardware – locks and latches.

BS EN 1303. Building hardware - Cylinders for locks.

BS EN 1906. Building hardware – Lever handles and knob furniture.

BS EN 1935. Building hardware- Single-axis hinges.

BS EN 12320. Building hardware - Padlocks and padlock fittings.

BS EN 13724. Postal services – Apertures of private letter plates.

BS EN 1627-1630. Windows, doors, shutters - Burglar resistance.

SS 306 Sold Secure Specification for Mechanical, Domestic Door Security Systems.

SS 312 Sold Secure Specification for Cylinders for Locks

DHF TS 621. Thief resistant electromechanically operated lock assemblies.

DHF TS 007 Enhanced Security Performance Requirements for Replacement Cylinders and/or Associated Security Furniture

DHF TS 008 Letter plates Enhanced security and general requirements for letter plate assemblies and slide through boxes.

DHF TS 009 Letter boxes Enhanced security and general requirements for letter box assemblies that are free standing or surface mounted and where mail is retrieved from the same side as delivery.

APPENDIX A

Specification of acceptable hardware

A) All doors Hinge bolts or security hinges with protection from hinge pin removal on all outward opening doors.

B) All doors A lock certified to BS 3621, BS 8621 and BS 10621 together with its approved striking or box plate and accessories as tested.

C) All doors An acceptable alternative lock with the lock manufacturers approved striking or box plate and accessories as approved by the Insurers.

D) Single door A multi-point lock system with a minimum of three horizontal locking points with Pedestrian a central bolt (minimum throw 13 mm) and two dead or hook bolts garage (minimum throw 20 mm). All locked simultaneously by one operation of the doors key.

Alternatively a multi-point lock certified to Sold Secure specification SS306 or PAS 3621.

E) Sliding Anti-lift devices

F) Sliding Main locking system plus key operated patio door lock or security bolts (minimum throw 9 mm) at the interlock at bottom of the door and if practical at the top of the door. Alternatively a patio bar.

G) Sliding A hook lock certified to BS 3621 or BS 8621 together with its approved striking plate and accessories as tested

H) Sliding A multi-point lock system with a minimum of three horizontal locking points Incorporating hook bolts (minimum throw 20 mm) and/or vertical shoot bolts (minimum throw 14 mm) locking into the head and sill of the door frame. All locked simultaneously by one operation of the key. Alternatively a multi-point lock certified to Sold Secure specification SS 306

J) Double doors The main locking system plus 2 key-operated rim or mortice security bolts 2nd closing leaf (minimum throw 14 mm) (casement doors)

L) Double doors Two key operated rim or mortice security bolts (minimum throw 14 mm) 1st closing leaf (casement doors) Windows

M) Double doors Two flush bolts (minimum throw 14 mm) mounted on door edge and 1st closing leaf concealed when doors are closed

N) Double doors- A multi-point lock system with a minimum of three locking points with a central 2nd closing leaf bolt (minimum throw 13 mm) and two dead or hook bolts locking into the head and sill of the door frame (minimum throw 14 mm). All locked simultaneously by one operation of the key. Or a multi-point lock certified to Sold Secure specification SS 306

P) Windows A window lock with removable key

Q) Windows A substantial locking handle with removable key

S) Windows A multi-point locking system with removable key

T) Doors A door-set certified to PAS 24

U) Windows A window certified to PAS 24

V) Doors to A heavy duty padbar bolted to the door and frame and fitted with a padlock outbuildings and fittings certified to EN 12320 Grade 3

APPENDIX B

Hardware required to be fitted (as listed in Appendix A)

Hinged final exit door A plus B, C or D, or T

Other single hinged external doors A plus B, C or D, plus L (2 off), or T

Pedestrian doors on garages and domestic A plus B, C, D or V, or T outbuildings

Double doors (1st closing door) A plus L (2 off) or M (2 off)

Double doors (2nd closing door) A plus B, J or N

Sliding doors E plus F C, G, or H

Louvre Windows See text

Accessible windows and ground floor L, P, Q, S or U openings (But not emergency egress windows)

A sash less than 600 mm in width or height requires a minimum of one locking point. For all other sashes a minimum of two locking points is required

APPENDIX C

MLA Code of Practice

OBJECTS

The Objects of the Association shall be as stated in the Memorandum and Articles of the Association.

The following is a summary of some of these objects:

- a) To protect, preserve, promote and represent persons, firms or bodies engaged in the locksmithing industry.
- b) To advance education and training.
- c) To agree standards of conduct, practice and materials.
- d) To maintain a high standard by members for the protection of the public at large.
- e) To enable the Association to attain a recognised status.
- f) To prescribe, regulate and conduct examinations and to charge fees, award qualifications.
- g) To carry on business as technical locksmiths, security consultants, specialist wholesalers, retailers and dealers in locksmithing tools, equipment and members' services.
- h) To apply for, purchase or otherwise acquire patents and licences.
- i) To produce, publish and distribute a journal.
- j) Co-operate with any body for the purpose of promoting the association.
- k) To purchase or lease property and/or rights for the purpose of the association.
- l) To do all such other things as are incidental to the attainment and furtherance of the said objects or any of them.

CODE OF ETHICS

To assist the achievement of the above Objectives, Each member of the Association, by his acceptance and continued membership thereof, shall be deemed to have subscribed to the following:

- 1) To pursue his activities, conforming to professional standards and maintaining high ideals of personal honesty and integrity.
- 2) To abide by the policies and codes of practice of the Association, as established from time to time.
- 3) To analyse impartially and to the best of his ability, security problems receiving his attention and to advance the best possible solution for the protection of his clients.
- 4) To conduct himself in a dignified manner and to refrain from using improper or unprofessional methods in furthering his business.
- 5) To co-operate in advancing the best interests of the locksmithing and keycutting industry, always ready to apply his special knowledge, skill and training for the use and improvement and betterment of his profession.

- 6) To encourage and promote loyalty in his profession by acting in a fair, reasonable and business- like manner in any dealings, especially those with any fellow member

INTRODUCTION

MLA Approved Companies' management and staff should provide products and services with skill and integrity. They should give all end-users the benefit of their experience in all aspects of security products and their applications.

There are five main areas of locksmithing services and the following codes are intended to clearly state a company's obligation to identify and interpret the requirements of the customer and to provide a fair and honest service to meet those requirements.

The codes also highlight specific exceptions that can occur due to the technical nature of some aspects of locksmithing and it is considered by the MLA to be fair that customers are made aware of these exceptions.

It is essential that the customer understands that the service or product does meet with their requirements and that they are aware of the costs or charges, either in writing or verbally and that they are also aware (if applicable) of the likelihood of any additional costs.

Certain lock and key systems are protected by law and replacement or extra keys will not be duplicated without the correct authorisation procedure. The company is obliged to operate these procedures to comply with law and in the best public interests.

INSTALLATIONS

MLA Approved Companies will be inspected periodically to stringent standards. Companies are dedicated to provide skilled and accurate workmanship, and are positively encouraged to maintain standards in Training, Equipment and Best Practices.

All companies must be properly insured to carry out security installations on, or to, a customer's premises.

Exceptions will occur if any alteration, amendment, removal or reinstallation is attempted by any persons other than the original installing company. This also applies if any undue wear and tear, abuse or act of vandalism is apparent.

If product failure or faulty workmanship causes a Lock-Out the company may reserve the right to ascertain the cause and carry out any appropriate rectification, also to make

charges where applicable, having advised the customer. Liability is limited to replacement value only of the same or similar equivalent product and in all cases limited to the guarantee periods.

VOLUNTARY CODE OF PRACTICE FOR CUTTING VEHICLE KEYS

This code suggests that you ask the customer to fill in the appropriate form and prove their identity under the following circumstances:

1. If a customer produces a vehicle part, for example - a door lock, petrol cap or ignition barrel.
2. If a customer provides a key number.

Customers should be asked to fill in the form and prove identity before you cut the key or order the key from a supplier.

The form can also be used in the case of key duplication when the member is uncertain that the customer is the rightful owner of the car.

If a member has regular customers that produce parts to cut keys for, it is recommended that the member has a brief record showing the date each key was cut and the registration number of the car.

It is the company's responsibility to get a form completed by the customer even if a key is ordered from one of the service providers; they will assume you have completed the formalities.

CODE OF PRACTICE FOR THE DUPLICATION AND/OR SUPPLY OF KEYS

This Code of Practice is effective from 1 January 2000 and supersedes all previous instructions/directions.

SECTION ONE - SCOPE

The Code of Practice shall apply to the duplication and/or supply of keys, whether on manufacturers original blanks or substitute blanks available from any legal source.

NOTE: It is expected that members, when asked to duplicate and/or supply keys, will (1) uphold the integrity of the Association and (2) protect themselves against the possibility of claims for damages by an authorised keyholder, should the member duplicate and/or supply a key to an unauthorised person.

SECTION TWO - PROHIBITED KEYS

Members are advised that it is illegal to duplicate keys which are protected by a current Patent and should never knowingly duplicate keys in contravention of the above.

SECTION THREE - DUPLICATION OF KEYS

These instructions apply to the duplication of keys, whether by hand or by machine, or cut to code, and/or supply of keys of the following types:

- (1) All keys identifiable as safe keys.
- (2) Master keys, Sub-Master keys, Sub-Grand Master keys and Grand Master keys.
- (3) Any key cut on a Restricted or Special Section profile blank and known to be used for master suites, restricted or registered keys.

SECTION FOUR - AUTHORITY TO DUPLICATE

The duplication and/or supply of such keys must only be carried out against a properly completed authorisation, such as the MLA "Authorisation for the Supply of Keys" form.

Alternatively, a properly constituted written customer's authorisation is acceptable. This must be on headed notepaper or a customer's order form, detailing the following:

- (a) Name, address and telephone number of the owner.
- (b) Name and address of the member requested to duplicate and/or supply the keys.
- (c) Quantity and type of key(s) to be supplied.
- (d) Markings (if any) to be put on such keys.
- (e) The signature of the owner or his representative, with the name also printed in capital letters and the signatory's position within the organisation.
- (f) Date of order.

A member requested to duplicate and/or supply such keys must be satisfied beyond all reasonable doubt as to the authenticity of both the authorisation presented and the identity of the person presenting the authorisation.

In the event of any doubt whatsoever, it is the responsibility of the member being requested to duplicate and/or supply security keys to check with the owner as defined, the authenticity of such an authorisation and to check the credentials of the individual presenting same. Full details of such investigations must be retained for a period of not less than two years.

SECTION FIVE - RECORDS

All members duplicating and/or supplying such keys must keep, for a period of not less than two years, all authorisation forms and letters. These are to be made available:

- (a) To the MLA Council upon request, to ensure that these instructions are being upheld or to assist in investigating complaints.
- (b) To a manufacturer of such keys, to prove that these instructions are being upheld and to assist in investigating complaints.
- (c) To an officer of the Police Force, Military Police, Customs and Excise, Inland Revenue or any similar authority acting in the investigation of crime.

SECTION SIX - CONTROL OF KEY BLANKS

Blanks for keys of a restricted section profile must be kept separately from standard blanks.

Under no circumstances may any restricted section profile blanks be altered to a different section, nor may any blank be knowingly altered to a cylinder which the member believes to be of a restricted type. There are no exceptions to this rule.

Under no circumstances are blanks for security keys to be disposed of or sold to any third party without an official authorisation requesting such blanks and a copy of the owner's authorisation for the duplication of such keys.

CODE OF PRACTICE FOR OPENING & GAINING ENTRY TO BUILDINGS, VEHICLES & CONTAINERS

THIS CODE OF PRACTICE IS EFFECTIVE FROM 1 OCTOBER 1996 AND SUPERSEDES ALL PREVIOUS INSTRUCTION/DIRECTIONS.

SECTION ONE - SCOPE

The Code of Practice shall apply to any requests within a trading arrangement to open or effect entry into or onto all types of buildings sites, or property including vehicles, all types of containers, safes, cash boxes, cabinets and desks, any type of lockable or security devices.

SECTION TWO - PROOF OF AUTHORITY Commercial or Industrial Premises

Proof of authority must consist of the following

- Official Order or Letter of Authority stating clearly the date, the address at which the service is required with precise instructions of the service required and who the authorised site contact will be.
- Faxed Authority as in (a) above.

Private Dwellings

One or more of the following:

- Driving Licence showing address of premises.
- Passport or other acceptable means of identity or
- Neighbour identification.
- Police presence.

Vehicles

One or more of the following:

- Driving Licence showing home address quoted
- Passport or other acceptable means of identity or
- Vehicle registration documents.
- Police or road Association presence.

There are 4 other sections which deal with advice to members on how to verify the customers authority to request this service. It is therefore inappropriate to disclose these security measures. Any person having need of this information may apply to the MLA's Head Office stating the reason for the request.

Want to be in our Find a Locksmith Directory

The screenshot shows the 'Find a Locksmith' directory website. At the top, there's a navigation bar with links like 'Home', 'Find a Locksmith', 'Services', 'About us', 'Security Advice', 'MLA Expo 2015', 'FAQ's', 'Blog', 'News', and 'Contact us'. Below the navigation bar is a search interface with a map of London. The map shows several red location pins indicating locksmith locations. Below the map, there's a list of locksmiths with their details, including names, addresses, phone numbers, and email addresses. The list includes 'Count Security Ltd - Soho London Locksmiths', 'Bramah Lock & Alarms', and 'William Channon - Holborn Locksmiths in Central London'.

Top of Google

The screenshot shows Google search results for the query 'find a locksmith'. The search results include a map of Lincoln showing several locksmith locations. Below the map, there's a list of locksmiths with their details, including names, addresses, phone numbers, and email addresses. The list includes 'The Lock-man', 'Car Key Man Lincolnshire', and 'Lincoln Security Retail Store'. At the bottom of the search results, there's a box with the text 'Find A Locksmith Near Me & Local | Master Locksmiths ...' and a link to 'www.locksmiths.co.uk/find-a-locksmith/'.

MLA Approved Company Sector

The Master Locksmiths Association was first conceived in 1957 and was the idea of the Chubb Lock Company and one or two London Locksmiths. The prime mover was Mr. Steve Fallshaw, then a locksmith in The Barbican, who became its first Chairman when it was formally founded early in 1958. The original sixteen members decided the new 'association' should be known as The Greater London Master Locksmiths Association (GLMLA).

By the end of the first decade it had grown nationally with a wide distribution of members from all parts of the United Kingdom. At this time it elected its first national President namely Mr. Steve Stephens of Oxford. The association by now included members from overseas and a healthy growth has been maintained, we now number almost 1500 members in all sectors.

In the early 90's the association restructured to meet modern demands, retaining its title Master Locksmiths Association (MLA) it formed three sectors. They are the 'British Locksmiths Institute' (BLI) for its individual members' skill qualifications, 'Guild of Keycutters' for all producers of keys wishing to comply to standards and 'Approved Company' for trading companies. The fourth 'Affiliates' sector remained unchanged and represents the manufacturers' and suppliers to our industry.

Aims of the Approved Company Sector

Companies and locksmiths trading in their own right, with retail premises or operating as a mobile locksmithing business, join the MLA Approved Company sector. It is this sector of the Association that trades directly with the public and private sectors in the High Street and through Yellow Pages, and other advertising media.

The Approved Companies inspectorate means the MLA can demonstrate that all Company Members are meeting high standards. Each company is inspected on a regular basis, thus ensuring that its members and their operatives maintain standards in workmanship and administration. Also members are expected to conform to legal requirements and that customer charters exist to service customer satisfaction.

Inspections have the effect of making locksmithing companies more accountable for their daily operations. Approved Company members are made aware that the MLA considers that training is also a valuable means to maintaining standards. Training is offered at the purpose built, state of the art training facility at the MLA's Head Office in Daventry.

Continued growth of the Approved Companies ensures that the MLA can offer a national network of locksmiths and the Associations head office in Daventry refers enquirers to their nearest approved company. A National 0800 number enables potential customers to find the nearest member quickly or check those companies displaying the MLA logo are bona fide members.

The Logo depicted here is the one that is advertised by an approved company on their premises, vehicles and stationery, confirming to the public the standards expected of them.

Channels of arbitration exist to fully investigate any complaints or disputes, should they arise, and the MLA advises or takes any necessary action. The Board of Directors continually looks at consumer matters and advises members when appropriate.

The Approved Company sectors operates schemes whereby discounts may be available to policyholders of most well known insurance companies and they provide the service behind many major help-lines.

The Master Locksmiths Association "Approved Company" helpline is available to locate your nearest locksmith: — 0800 783 1498 or alternatively you can visit our website www.locksmiths.co.uk where you find you local MLA locksmith using the integrated search functionality.
