INTRODUCTION BY CLAIRE BLAKEMORE, MANAGING DIRECTOR, MUL-T-LOCK UK&I.

It is with great pride that I have been entrusted with the privilege of introducing the 2024 Master Locksmith Association Handbook and Sold Secure Catalogue.

Together, we recognise the ever-evolving landscape of security and the need to stay proactive in the fight against crime. We must support each other to push the boundaries and develop locking solutions that meet and exceed our industry's rigorous demands.

This Handbook serves as a comprehensive guide, bringing together the collective wisdom of locksmiths from across the nation, and Mul-T-Lock is proud to be a part of this collaborative effort.

Complementing this, the products featured in the Sold Secure Catalogue have been meticulously designed and rigorously tested to ensure they provide the highest level of security and reliability.

In the 2024 edition, there is a wealth of information on the latest advancements in locksmith technology, industry

trends, and expert insights from seasoned professionals. We believe that a well-informed locksmith community is crucial to maintaining the highest standards of security and professionalism.

As we embark on another year of challenges and opportunities, let us come together as a community to learn, grow, and shape the future of locksmithing to deliver peace of mind when it is needed most. I am confident that, with the support of the Master Locksmith Association and the dedication of locksmiths nationwide, we will continue to elevate our industry to new heights.

A handwritten signature in black ink, appearing to read "Claire".

Claire Blakemore
Managing Director, Mul-T-Lock UK&I

MLA OVERVIEW.

The Master Locksmiths Association (MLA) is the UK's largest trade association for locksmiths, established over 65 years ago as a non-profit body to promote and set standards of conduct, practice, and materials within locksmithing. With a team of experienced professionals and a network of partners and affiliates, the MLA is one of the leading authorities in security matters, providing advice to UK property owners and renters on how to secure their homes and businesses.

APPROVED COMPANIES

MLA Approved Companies must meet the rigorous criteria set by the MLA to be granted approval. These criteria include thorough background checks, consistent quality inspections, and the requirement of employing at least one staff member who has successfully completed the MLA Exam.

MLA Approved Companies offer expertise, product recommendations, and professional installation and maintenance services. To find your nearest MLA Approved Company refer to the directory section of this Handbook or visit locksmiths.co.uk.

TRAINING LOCKSMITHS

In addition to promoting standards of conduct and practice, the MLA offers a range of training programs to locksmiths across the UK from its purpose-built training centre in Rugby, Warwickshire.

MLA EXPO

One of the MLA's most significant Industry events is the MLA EXPO, which is held every other year and is one of the world's largest locksmith exhibitions. The event brings together locksmiths, security professionals, and industry experts from around the world to showcase the latest products, technologies, and services in the locksmithing and security industry.

SUPPORTED BY

The MLA is recognised as the authoritative body for locksmithing by the police, home office, British Standards Institute (BSI), the Risk Insight, Strategy and Control Authority – RISCAuthority (formally IPCRes, the UK property insurers' technical group) and Building Research Establishment (BRE). The MLA also has a subsidiary company, Sold Secure, which performs certification of security products via manual attack testing.

Overall, the MLA is committed to promoting and maintaining the highest standards of professionalism, ethics, and expertise within the locksmithing industry, ensuring that the public can trust and rely on the services of its members.

MLA Technical Manager Justin Freeman and Managing Director Steffan George with Amadeo CEO Ali Aydan seal the deal for MLA EXPO25 Diamond Sponsorship.

OVERVIEW FROM THE MANAGING DIRECTOR, DR STEFFAN GEORGE.

What a year 2023 has been: promotion, awareness. TV presence, advertising, training, a little thing called MLA EXPO... it was 'all systems go' all year!

From a training point of view then the new UPVC and Composite Master Class got off to a cracking start, helping members get updated in the ever growing area, helped by the installation of yet more UPVC and composite doors in our training

facility. It's been great to see the facility used so much, not only for MLA training but also for affiliates, a number of whom have run their own product related training courses here, and something we plan to do more of in the future. From an exams point of view then things continued to go from strength to strength with our nationally recognised and Ofqual regulated qualification through the Awarding Body for the Built Environment (ABBE). Add to this the particularly pleasing fact that for the last exam (at the time of writing) every single person who passed has applied to progress to become approved company members. We must be doing something right! Following some changes to the way the committee works (specifically the terms of office), vacancies were advertised, and new members were appointed to the training committee and Mitch, I and the team look forward to working with them to help progress and continue to develop the training offering.

MLA Promotion ramped up a gear in 2023 as we saw our first live appearance on TV, and an interview with Ian King Live on Sky News none the less! It was a somewhat of a scary lead up to it, to be honest the floor manager and Ian made it a very enjoyable afternoon and I am very grateful to them for the opportunity to get the message out to their nearly two million viewers about not trusting search engine adverts, but making sure that the locksmith you chose is a locally based, vetted, inspected and qualified professional. This was on top of radio presence which went out to a further 2.8 million listeners and a feature on the BBC with another nearly one million viewers. The 'reach' certainly went up in 2023! This was of course just part of the promotional campaign the MLA was involved in during the year. The work with the Neighbourhood Watch Partnership continued with us advertising and providing content for their newsletters. We also trialled display ads on Rightmove, focused around locations where our approved companies are based (so as to not waste any budget) we were impressed to find our click through rate was eight times their average!

MLA EXPO23 was a resounding success. Footfall was up significantly and the Friday in particular, despite the weather conspiring against us, was extremely busy – probably the busiest first day of any Expo. There was a real buzz in the halls as people were keen to find out more about the latest products. The training put on seems to have gone down really well with a number having sold out well before the event even opened! I think it's fair to say the quality of the stands was

the best ever, with a real mix of large and small companies (and stands) benefiting from the fantastic visitor numbers. An excellent Gala Dinner on the Saturday night enabled an amazing amount to be raised for the Expo charity which this year was The Poppy Factory. A massive thanks to all those who were involved in helping make it such a brilliant event.

The event was such a success that we've been astounded by the speed at which companies are signing up to exhibit at MLA EXPO25! We had 25 companies sign up to exhibit during the show itself (as we had the dates booked well in advance – see elsewhere herein and make sure they're in your diaries!) with many more having signed up in the days thereafter. This included two sponsors: Amadeo as Diamond Sponsor and Locks 4 Vans as Garage Sponsor.

So, looking towards 2024, what does the new year have in store for the Association? There will of course be plenty more work to benefit members and the industry. More marketing and promotion, starting with further investigation into the benefits of social media advertising. We will be focusing on Facebook, Instagram, YouTube and LinkedIn, the latter focusing specifically on the commercial type of work that members get involved with. Training will no doubt continue to grow with some new courses being planned. One of the more important, in my opinion, activities of the year however will be the research we'll be doing. To help guide us in terms of our strategy for the next 2-5 years. We embarked on this process at Expo, having engaged a specialist company to assist, and carrying out so called 'intercept interviews' with attendees at the show. The results were interesting, and the next step is a more detailed online survey which, at the time of writing, is about to be launched. This is vital to help shape the future of the MLA.

I must give huge praise to the team here at Head Office for all their hard work and flexibility over the past 12 months. I said I thought we had a particularly strong team now in my article last year, and I'm glad to say I've been proven right with the team having done an amazing job. Thanks also to our board directors (current and those who stepped down during the year), all regional officers (it's been great to attend events over the year, at least when I don't break down on the way! Long Story – let's just say eight hours waiting for a tow truck meant I got to know a layby 19.9 miles outside Peterborough particularly well!), tutors, testers, inspectors and of course all our members. I look forward to working with you all in 2024.

Dr Steffan George
Managing Director

MLA MEMBER BENEFITS.

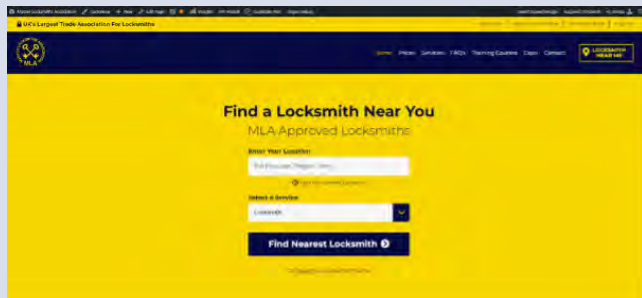

So why join the MLA? What's in it for the locksmith? As well as the training and MLA EXPO mentioned elsewhere in this handbook, there are a significant (and ever growing!) number of other benefits to MLA membership. These include:

YOUR OWN APPROVED COMPANY PAGE

Approved company members have a dedicated SEO-friendly MLA approved company page on the MLA's website to greatly increase sales leads.

LISTING ON 'FIND A LOCKSMITH' PAGE

Your MLA approved company profile will be searchable when anyone searches for a locksmith on our website.

USING THE MLA LOGO

Approved companies may display the MLA logo on their website, marketing materials, van, clothing and wherever else you promote your business.

QML members may make use of the MLA logo on their business stationery and corporate clothing.

KEYWAYS MEMBER'S JOURNAL

Keeping you up to date with industry developments, new products, and news from the association, all members receive the association's official magazine, Keyways.

REGIONAL MEETINGS

Attending regional meetings is a great way to meet new colleagues in the association, talk to experts, listen to seminars, visit small exhibitions and ensuring you maintain your continuous professional development.

MEMBERS FORUM AND MEMBERS FACEBOOK GROUP

Share your knowledge, seek advice, and stay up to date with MLA activities our forum and members Facebook group are a great way to network with fellow locksmiths. We often share job vacancies, member offers and other opportunities.

You'll find our online forum when you login at locksmiths.co.uk. Our members Facebook group is open to all members all you'll need to join is your MLA membership number.

MEMBERS ONLY BENEFITS AND DISCOUNTS

Members have access to discounts from leading suppliers and trade, exclusive rates for business and health insurance and preferential rates and terms for banking, payments, and finance. We can even help you stay on the road with discounted rates for business breakdown cover.

Our range of benefits and discounts are regularly updated and added to. Members can log into their members area for full details of the discounts.

ALREADY A MEMBER? VISIT YOUR MEMBERS AREA TODAY!

Log into your members area, using the password provided, for information on regional meetings, member benefits and discounts, access to webinars, order encyclopaedias and more.

Use the code on the right to login today!

MLA LOCK ENCYCLOPAEDIA OF BS LOCKS AND MORE

Only available to MLA members, our MLA encyclopaedia of BS Mortice locks and more is an invaluable tool to all locksmiths. Created by our members the encyclopaedia provides an ongoing resource and is available for just £225 + £11.75 P&P.

Please complete the booking form at the link above to order your copy today!

MLA UPVC LOCK CASE IDENTIFICATION MANUAL

Our MLA UPVC lock case identification manual is just £125 + £11.75 P&P and is only available to our members.

A great resource for anyone working on UPVC and composite doors a perfect companion for anyone working with multi-point locks.

Please complete the booking form at the link above to order your copy today!

TECHNICAL ASSISTANCE

The MLA's Technical Manager is on hand to help answer any questions you may have related to, for example, lock standards etc. By sitting on the various lock related working groups and British Standards Committees the technical manager has first-hand information as soon as items are discussed and provides regular feedback to members via articles in the association's journal or by presentations at regional meetings.

A significant amount of useful information (links to useful documents etc) is available via the members section of the website.

The MLA has also purchased access to the AIS Safe List and are able to provide cash rating info to members who ask about specific safes.

ADVERTISING & PROMOTION

As well as being advertised on the MLA's find a locksmith page and in this Handbook, MLA approved company members can also advertise in corporate boxes in various directories.

TRAINING AND TRAINING DISCOUNTS

Due to the content of the courses there are several courses that are available only to members including Timber Fire Doors – Maintenance & Repair Course and 7 Lever Safe Lock Picking.

All members will receive a discounted rate all MLA training courses.

Eligible members can receive discounts on training when they choose to book on multiple courses.

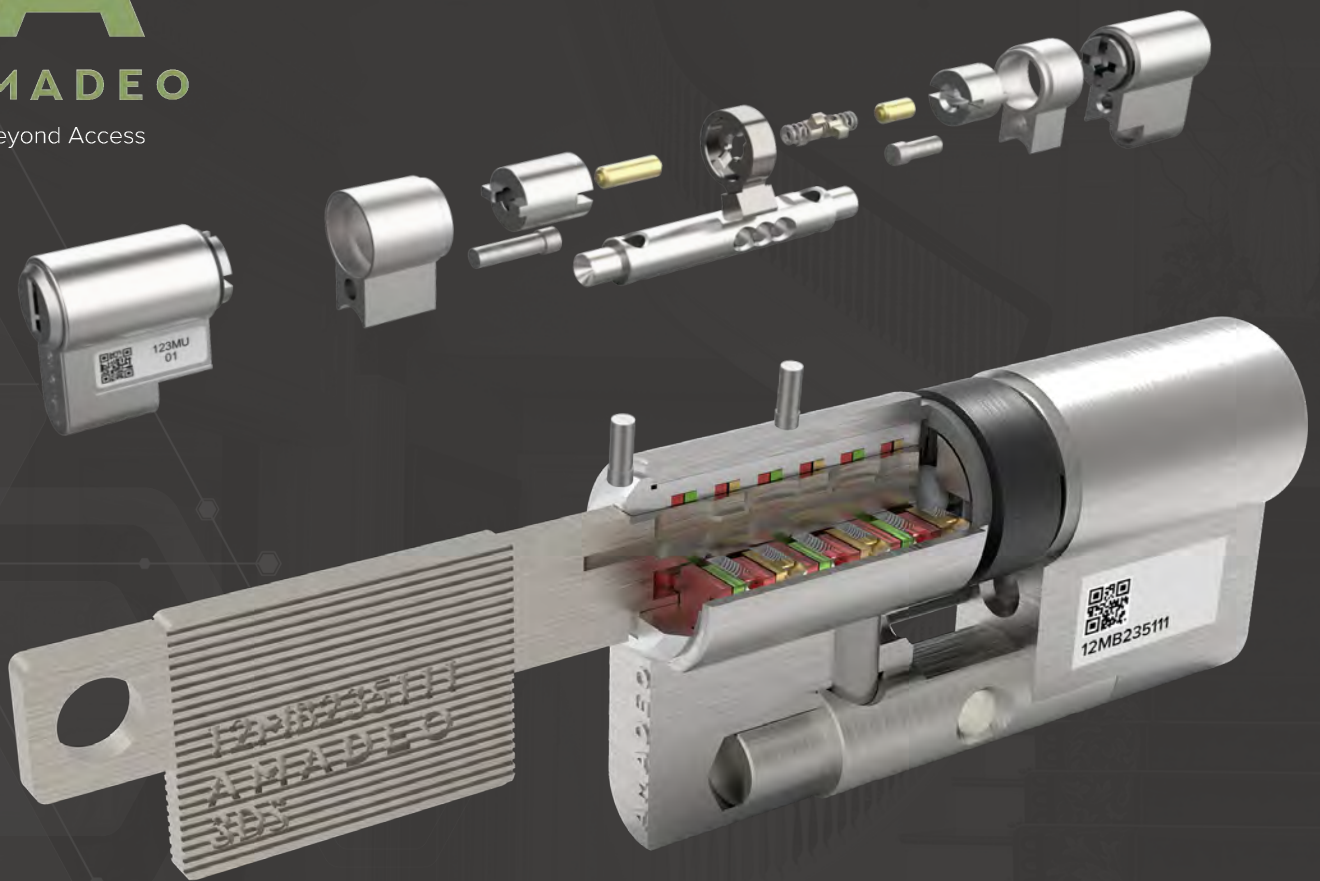

Members of six months or more can save 5% off the discounted member price when they book and pay in full for three or more courses together.

Members of six months or more can save 15% off the discounted member price when they book and pay in full for five or more courses together.

To be eligible for these discounts we require members to have been with us for six months, have booked the courses all at the same time and have paid for the courses in full.

To view our extensive range of training courses, use the code above.

MLA TRAINING.

The MLA offer over 40 courses a year with weekend options available. Due to the nature of the content some of the courses may only be open to MLA members.

What we offer:

PURPOSE BUILT TRAINING CENTRE

The MLA are the UK's premier provider of locksmith training from their purpose-built headquarters, incorporating a state-of-the-art training centre consisting of a classroom environment for theory work and fully equipped workshop for hands on practical elements.

EXPERT TRAINERS

Our passionate specialist tutors keep up to date with the latest advances in the field and create and tailor courses to meet the requirements to the ever-changing locksmithing industry.

QUALITY DELIVERY

We ask students to provide feedback after every course to help ensure we are delivering the best training possible.

THEORETICAL AND PRACTICAL-BASED TRAINING

Classes include a mixture of theory and practical training, so you walk away not just knowing what you are doing but why you are doing it.

SMALL CLASS SIZES

Most classes are restricted to no more than 10 people, insuring you can get direct help from our tutors when you need it.

PROGRESSIVE LEVELS

Our courses have been developed to offer locksmiths the opportunity to build their skills from the very beginning all the way through to advance and specialist skill sets. Setting a path for consistent progression over ones locksmith career.

THE MLA EXAM

The MLA Exam, which is renowned throughout the locksmithing industry as the only formal locksmithing exam-based accreditation for locksmiths, is now an Ofqual recognised qualification, accredited by ABBE (Awarding Body of the Built Environment). For more information, please see the separate section on the MLA Exam in this Handbook.

OUR COURSES

Beginners Course

Perfect for total beginners and those with basic training. This course is tailored for anyone wishing to begin a career in locksmithing or require a basic knowledge of locksmithing for their job. You will learn everything needed to begin your journey into locksmithing from how to cut keys to opening and fitting locks.

Our beginners' course is made up of four separate modules. Which you can choose to study at your own pace by either attending all five days at once (Five-Day Beginners Course) or selecting individual modules to take over time.

Two-Day Foundation Course (Mon/Tue)

The foundation course gives you the perfect introduction to mechanical locksmithing and is ideal for those with no experience and entirely new for locksmithing.

You'll leave the course understanding:

- Knowledge of the types of locks currently in use and terminology
- Cylinder Key Identification
- Understand Pin Tumbler Mechanisms
- Learn how to set up a Cylinder Key Machine including maintenance and safety
- Know how to cut a cylinder key and a mortice key by machine
- Stripping rim cylinder
- Mortice key blank identification
- Lever mechanisms
- Mortice locks
- Lever lock key cutting by hand
- Safes (brief overview)
- Understand lock Opening Basics (intro to picking, wafer lock and picking open disc tumbler lock)
- Code key cutting

Lock Fitting (Wed)

Get hands-on experience installing a selection of the most common locks and security devices.

You'll leave the course with:

- Knowledge of the tools required for fitting
- Practise fitting a rim night latch
- Practise fitting a lever mortice lock
- Practise upgrading a lever mortice to euro cylinder operated mortice
- Practise fitting secondary security devices

UPVC Module (Thu)

This module will help broaden your skills and give you experience of working with UPVC door locks.

You'll leave the course understanding:

- Multi-point lock ID (various locking types/mechanisms, back sets, strike plates, profiles and packing etc.)
- Toe and heeling
- Opening jammed mechanisms
- Gearbox replacement
- Hinges and handles
- Security upgrades
- Additional security

Level 1 Opening (Fri)

Get hands-on experience practicing the basic lock entry techniques on a selection of the most common locks.

You'll leave the course with:

- Familiarity with the tools for opening
- Methods of entry
- Opening authority procedure
- Theory of mortice lock picking
- Picking 2 and 3 lever mortice locks
- Other opening methods for 2/3 lever locks (jigglers, overlift)
- Lock identification (how to)
- Theory of mortice lock drilling

- ERA 5 lever padlock opening
- Theory and then practical of picking pin tumbler locks
- Theory and then practical of drilling cylinder locks
- Pick guns
- Other opening techniques (bumping, snapping, slipping, letterbox tool)

For more information and to book, please visit our website locksmiths.co.uk. Alternatively, this code will take you right there!

ADVANCED AND SPECIALIST COURSES

Our Advanced Specialist courses are designed for those with experience who are looking to increase their skill set and expand their service offering as well as progressing into more specialised fields of the trade.

Timber Fire Doors – Maintenance & Repair Course

This member only course launched in 2022 and has already proven to be very popular. Ideal for locksmiths who have experience and practical skills for maintaining timber-based doors and now wish to improve their knowledge of maintenance requirements for fire resisting doors.

This course is designed for refurbishment contractors, fabric engineers, maintenance teams, carpenters, and joiners. People that already have the practical skills but require more useful knowledge about compliance with the regulations and standards that apply to maintenance and repairs of timber-based fire doors.

You'll leave the course with a good knowledge of fire door testing standards and how maintenance and repair work should be carried out to adhere to those standards. You'll be required to sit an exam at the end of the course with successful candidates receiving a certificate by awarding body FireQual, which is valid for five years.

Composite and uPVC Masterclass

This brand-new course which kicked off in 2023 is open to both members and non-members and is designed for locksmiths with strong uPVC knowledge looking to improve on their existing skills to take on more work.

With more Auto-fire Composite doors being installed around the country, this course will give you something extra in your armoury to deal with these types of multipoint locking mechanisms.

New uPVC and composite training doors have been fitted in our training room to provide you with up-to-date real life scenarios and how to deal with them in the field.

continued overleaf

Van Lock Fitting

This course is ideal for Locksmiths wishing to provide an additional service tackling the common occurrence of van break-ins and theft. Using Locks 4 Vans products, known to help tackle the ever-growing issue with their wide array of products, this course will set you up to be able to successfully install vehicle locks.

This course will cover:

Deadlock recommended tool list | Slamlock recommended tool list | Additional equipment recommendations | The correct marking up and preparation before installation | In-depth guide on the correct and safe installation of products | Hands-on fitting to flat plates and simulation rigs then to a LIVE VEHICLE | All aspects of fitting the deadlock and hook bolt case as well as slam lock (time permitting) and much more.

Aluminium and Glass Door

Open to both members and non-members this course is ideal for locksmiths who work on or are interested in working on retail/commercial units.

The course covers all you'll need to know about working with aluminium and glass doors. Covering everything from the different hardware requirements as well as the health and safety topics (e.g. removal). This course is a mixture of theory and practical.

Learning outcomes:

- Understand how to safely remove, re-fit or replace the doors
- Learn how to gain access for repairing and re-keying the locks
- How to replace and troubleshoot issues with transom and floor springs
- Understand the implications of unchecked/un-serviced doors
- Understand the implications of misuse of these doors and how to prevent injury
- Know the difference between hold-open and non-hold open doors on Access Control installations
- Be aware of the different types of specialist hardware (e.g. fire escape applications)
- Know how to adjust and calibrate aluminium doors
- Learn how to covert from double action to single action
- Learn how to fit electric releases, mag locks and correctly align doors when using shear mags

Level 2 Opening

The perfect follow-on course from our Level 1 Opening, after some practical experience. You'll gain a deeper understanding of lock opening giving you the confidence to handle more complex jobs.

We recommend that this course is taken after some experience following any Level 1 training. Entrants should have a good understanding of lever lock terminology, how locks work and understanding of basic opening techniques.

Learning outcomes:

- Understand the basic methods of entry
- Opening authority procedure
- Various methods of entry explained
- Detailed lock identification through the keyhole
- How to successfully drill BS curtained mortice locks
- Including hints, tips and how to avoid the dangers of failure
- Hands-on drilling of BS mortice locks
- Instruction and hands-on NDE of Securefast, Eurospec and Chubb/Union 114

Advanced Curtain Lock Opening

This course is ideal for those who are looking to up their game in the art of non-destructive 5-lever curtain Lock Opening, something many fear and shy away from. This course is aimed to supply those with the confidence and knowledge in how to effectively pick these locks proficiently.

Learning outcomes:

- Learn mortice lock terminology
- Understand how mortice locks operate
- Lock Identification
- Select the right tool and wire
- Know how to use the correct tension
- Identify various Lever Types
- Identify anti-pick variations
- Know how to deal with Anti-picks

High Security Cylinder Lock Opening

This course is ideal for locksmiths wishing to take their service to the next level tackling the ever-growing market of high security cylinders, a standard fitting to new builds and new door installations by manufacturers.

Members can attend directly if they've been a member for 6 months or more. Non-members must have taken the foundation module first or be sponsored by 2 QML members or directors of MLA Approved Companies.

The following are all included and covered within the course:

Lock identification | Terminology of lock parts | Components and the make-up of cylinders | Drill protection | Snap protection | Side bars | Locking cams | Security handles | and more!

Auto Locksmithing

Open to both members and non-members this is a foundation course aimed at locksmiths that would like to add successful car opening to their range of services. Auto locksmith experience is not needed to undertake this course. You'll learn to use the popular Mr Li/Lishi lock picking and decoding tool which, once mastered, is transferrable to many other lock makes and types.

Split in two, the first part of training focuses on the widely used Volkswagen, Audi group (VAG) locks using the most popular key series in use, the HU66 (Silca ref) key. You'll gain an understanding of how these locks work, using a combination of presentation, and hands on with the locks and some theory work.

The second part of the training focuses on the popular Ford locks using the HU101 (silca ref) key. It is anticipated that the ford HU101 lock will provide a true test of your ability, but you will have the support of experienced trainers to help.

Abrasive Wheel Course

This course is now open to both MLA members and non-members and is ideal for anyone who works with angle/bench grinders to help them work with abrasive wheels safely in compliance with UK regulations.

The government has long recognised the dangers associated with Abrasive wheels and introduced the PUWER regulations in 1992. (The Provision and Use of Work Equipment Regulations 1998 replaced the original PUWER regulations first introduced in 1992). It is therefore a legal requirement for anyone using abrasive wheels to be able to demonstrate that they have been trained and are competent.

The MLA's Abrasive Wheels course follows the PUWER 98 guidance and will issue a certificate allowing you to demonstrate competency for a five-year period from the date of the course (which will thereafter need to be renewed) and is an easy way of showing compliance should you be asked during a health and safety visit.

Learning outcomes:

The legal implications regarding Abrasive Wheels | The hazards associated with cutting and grinding equipment, how to identify them and avoid the dangers | How to correctly use the flange and flange nut | How to store discs and wheels correctly | How to select and mount the correct disc/wheel for the job in hand | What are the correct grades of PPE to use | Equipment checks before and after use and more.

Safes and Safe Servicing

Open to both members and non-members, Safes and Safe Servicing is the perfect course for locksmiths wishing to add safe installation and servicing to their range of skills.

Created and delivered by renowned Safe Expert Jon Drake this course offers a great introduction to safes and safes servicing, the different types of safe and their uses, the different types of locking devices and how to recover locked safes and miss set combinations.

Electronic Security Fault Finding & Compliance

Open to both members and non-members this course is ideal for locksmiths looking to take on access control work, fault finding on access control and how to ensure that work is to current standards.

Attendees can expect to be able to have a newfound confidence in tackling access control systems. This course will ensure attendees have the required knowledge and understanding in how to deal with the faults in a professional and safe manner, improving their skill set and opening new markets to them.

Learning outcomes:

- Basic electrical principals
- Simple faults and how to find them
- Learning a methodical way to find faults
- Use of a multimeter
- Safe ways to work on mains electricity
- Basic knowledge of electrical laws
- Correct types of tools required
- How to install access control and comply with current standards

FOR MORE INFORMATION...

If you would like more information on the MLA Exam or any Training available, you can request a Training brochure by visiting www.locksmiths.co.uk or contacting the training team via phone on 01327 262 255 or email training@locksmiths.co.uk

AFFILIATE TRAINING DAYS.

2023 has seen a number of our Affiliates host their very own training days here at MLA HQ, all of which have been a great success, giving the opportunity for our members to become proficient in the products our Affiliates provide as well as allowing Affiliates to gain feedback and a personal connection with our members.

YALE – SMART DOOR LOCKS

Yale hosted training on Smart Door Locks including how to install their Conexis Smart Door Locks and a deep dive into the workings of these locks. The session also aimed to help members understand the various troubleshooting techniques as well as help on how to sell Smart Access solutions to their customers.

"Hosting the Yale Smart Door Lock training day at the MLA was very easy and straightforward. Both the classroom and demo room facilities were perfect for giving members the full picture of how the Yale range of door locks works."

Wayne Kennedy,
Head of Consumer Channel

BURG-WÄCHTER UK – SAFE SERVICING AND PROGRAMMING

The team at Burg-Wachter gave members an insight into the benefits of both their extensive range of high-quality German engineered safes as well as a taster of their Technical Safe Training Course. The session was aimed at providing locksmiths with technical support training and disaster recovery, alongside hands-on lock programming and upselling of additional services.

"We recently hosted a technical safe training day at the MLA head office, which is conveniently centrally located in the UK. The whole process from arranging the day, setting up the event and providing the training itself was a smooth and easy process, supported fully by the MLA along the way. We got to meet experts within the field, build relationships and share knowledge on both sides of the table. We felt the day was a great success and would look to do more events of a similar nature with the MLA in the future."

Matt Parkes, Marketing Manager

CODELOCKS – MECHANICAL AND ELECTRONIC LOCKS 101

Codelocks delighted our members by hosting two sessions over 2023 as part of their on going 'On the Road Locks' training projects which saw them run the Mechanical Locks 101 and Electronic Locks 101 which taught members common faults and maintenance issues associated with their Locks and gave an insight into their product range and applications. 2024 will see the same with another Smart Locks 101 being added to the calendar.

"The MLA Head Office in Rugby provides a conducive learning environment, with well-equipped meeting rooms and modern amenities – all these contributed to a positive and enriching learning experience during our Codelocks on The Road Locks Training sessions this year."

Having access to modern audio-visual equipment, comfortable seating arrangements and guest Wi-Fi made the learning process seamless and enjoyable. I also want to commend the staff for their professionalism and their responsiveness to any queries and willingness to assist in creating a welcoming atmosphere."

In summary, I am thoroughly impressed with the quality of the facilities and the commitment to creating an optimal learning environment. It is evident that the training centre focuses on providing a top-notch experience for its participants."

We have already secured a number of training dates for 2024 and are looking forward to engaging further with the MLA and its membership."

Michelle Watkins, Sales Manager

An enormous thank you to everyone who attended, exhibited, organised, trained, and helped make MLA EXPO23 our best show yet!

The quality of stands was amazing, probably the best we've ever had! From large to small – they were all excellent. The buzz in the halls was amazing. It was great to hear from so many who had picked up great deals!

We were absolutely thrilled with the overwhelming response we had to our diverse range of training programs.

Our thanks and appreciation go out to our Sponsors

- Assa Abloy (in particular Mul-T-Lock, Yale, Union and HKC) as Diamond Sponsors
- Amadeo as Gold Sponsors and
- Locks 4 Vans as Garage Sponsors.

A big shout out and thanks to our friends and colleagues at the Auto Locksmiths Association for their massive contribution The Garage @ MLA EXPO.

All topped off with a truly enjoyable Saturday night Gala Dinner which was enjoyed by so many.

Finally, we would like to extend our gratitude to everyone who generously contributed to our efforts, in raising an incredible £6477.59 sum for a truly deserving charity The Poppy Factory. The donation will undoubtedly make a significant difference to them and help them to support veterans with health conditions in finding meaningful employment opportunities.

MLA EXPO23 AWARDS.

Congratulations to ASSA ABLOY for their 'Best Stand' award at MLA EXPO23.

"We're absolutely thrilled that ASSA ABLOY has won the Best Stand award at MLA EXPO23. Being recognised by the MLA panel for Mul-T-Lock, UNION, Yale and HKC Security reflects our commitment to excellence and innovation in the security industry.

We worked tirelessly to create a stand and presence that not only showcases our high-performance products but also taps into the immediate needs of our customers. The aim was to provide an interactive and informative experience for our network of professional locksmiths.

It's a testament to the dedication and expertise of our team and will continue to set the highest standards in security solutions."

Claire Blakemore, MD, Mul-T-Lock UK

Congratulations to LOCKS 4 VANS for their 'Most Creative Stand' award at MLA EXPO23.

"Locks 4 Vans is so thrilled to receive the 'Most Creative Stand' award at the Expo. We wanted to give visitors a great experience and really showcase what we do, and we definitely achieved that! Thanks to everyone who came by to chat with the team or took part in our free product training sessions – we look forward to seeing you again next time!"

Dean Cassar, Locks 4 Vans

Congratulations to BURTON SECURITY for their 'Best Product' award at MLA EXPO23.

Burton Security would like to thank the MLA for awarding our Companion Safe BEST PRODUCT at the MLA EXPO23!

"Receiving this award from a team of industry experts really does mean a lot to everyone in the Burton company.

Developing and bringing new products to market involves a whole team of people back at the factory working for months and sometimes years bringing new concepts to market.

We opened our Design & Innovation centre in January 2023, so being awarded BEST PRODUCT by the MLA in its first year is a great reward for all our efforts.

I would like to personally thank everyone in our R&D, engineering, marketing, purchasing and warehouse teams for bringing the Companion Safe to market and our sales admin and sales team for all their work presenting it to our customers.

And most of all a big thank you to everyone who visited our team at the MLA EXPO23 and all our great customers who support the Burton brand."

Adam Greenaway, Group Director, Burton Security

AVDI ASSIST PLANS
COMPLETE AFTERCARE SOLUTION

We have had a tremendous start to our 2025 show with over 40 stands already allocated, a significant number of which signed up during the 2023 show.

We have had a tremendous start to our 2025 show with over 40 stands already allocated, a significant number of which signed up during the 2023 show.

We were absolutely delighted to finalise the MLA EXPO25 Diamond Sponsorship agreement with Amadeo Systems Ltd during the 2023 event. It's truly exciting to witness a relatively new supplier to UK locksmiths, who were Gold Sponsors at MLA EXPO23, now taking a bold leap to become the esteemed Diamond Sponsor for the upcoming event.

We eagerly anticipate collaborating closely with them to create a remarkable MLA EXPO25.

Speaking about the sponsorship Amadeo have said:

"After a hugely successful show this year as Gold Sponsor, it was the obvious next step for a growing business looking to make its mark in the access control market."

We are delighted to announce the return of Locks 4 Vans as our official Garage Sponsor. Locks 4 Vans, the experts in vehicle security solutions, especially top-notch locks for vans, have once again joined with us. We would like to thank Locks 4 Vans for their support and partnership. Their invaluable contribution to our association extends far beyond EXPO sponsorship, as they provide resources for our highly sought-after Van Lock Fitting course held at MLA HQ.

MLA EXPO will return to Telford International Centre from the 17th-19th of October 2025.

To be one of the first to know when tickets are released, please use the QR code below and complete the form to register your interest.

**If you would like to exhibit at or sponsor
MLA EXPO25 please email
justin.freeman@locksmiths.co.uk**

SAFETY AND SECURITY HELPING YOU HELP YOURSELF.

The MLA offer over 40 courses a year with weekend options available. Due to the nature of the content some of the courses may only be open to MLA members.

ELECTRONIC SECURITY FAULT FINDING AND COMPLIANCE

Electricity can cause serious injury as well as be fatal. Injuries can range from electric shocks which can cause muscular contractions and cardiac arrest to electrical burns which can be extremely painful as well as life threatening. We have some photos we show our students of these types of injuries which are far too brutal to be added to the Handbook, so you can imagine the damage that can be done if not handled correctly. That's why it is so important to understand the various risks and ways to prevent them when working with Electronic Security Devices.

Our Electronic Security Fault Finding and Compliance course is built for you to understand everything you need to know to begin safely working with electronic devices from the different safety measures you must take, to the tools you would need to use like Multimeters. All whilst explaining in such a way that you can begin installing Access Control products safely and make sure you comply with current Laws and Standards.

ABRASIVE WHEELS

Grinding and cutting machines in untrained hands can be highly dangerous. The dangers of these machines have long been recognised and training for operators has been made available for decades. The Provision and Use of Work Equipment Regulations (PUWER) deems it a legal requirement for anyone using abrasive wheels during their work to be trained, certificated and the details of their training to be kept.

The Master Locksmiths Association run comprehensive Abrasive Wheels Courses tailored to the locksmith industry. These courses are run from the MLA's training facility in Rugby and, on occasions, at various locations throughout the UK, including often at MLA EXPO.

Arrangements can be made, subject to numbers, for the MLA Abrasive Wheels tutor to visit venues across the UK and run these courses at MLA Regional meetings, and for specific companies where necessary, and supply certificates for every trained individual.

To book onto or arrange an MLA training course please contact the MLA Head Office in Rugby on 01327 262 255, email training@locksmiths.co.uk or access the MLA website on www.locksmiths.co.uk

Keep an eye out for whether it is being run at any regional meetings on the forum and Facebook group as well as communications from the regions.

THE MLA EXAM NOW A NATIONALLY RECOGNISED OFQUAL QUALIFICATION.

The MLA Exam (formally known as the BLI exam) is arguably the best recognised exam-based proof of competence in the industry. It is for this reason that it is one of the criteria for achieving the MLA Approved Company Status.

As of 24th of September 2022, if you choose to take the MLA Exam you will not only be recognised as a Qualified Master Locksmith, but you will also be gaining a nationally recognised (i.e. Ofqual approved) qualification, accredited by ABBE (the Awarding Body for the Built Environment).

The MLA qualification is a Level 4 certificate: Level 4 currently being the highest level you can achieve in a locksmith qualification; due to the high level of skill and knowledge you need to demonstrate to pass.

The qualification is a demonstration of actual competence rather than the number of hours training you undertake, meaning you are judged entirely on your level of knowledge and skill. This means if you're already a working locksmith with several years' experience you can sit the exam without

having to take any additional training. However, if you or a staff member are a complete beginner we'd recommend you start by taking our five-day Beginners' Course and then add subsequent modules along with time put in practising.

The content of the exam itself remains the same: four modules which can be split over one or two days. This consists of practical assessments covering fitting, opening and key cutting; and a written exam paper consisting of 50 questions on general locksmithing. If you need support, you can choose our 'with coaching' option.

As we haven't changed the assessment, anyone who sat and passed the exam from September 2017 to July 2022 will be able to upgrade their qualification certificate to the ABBE and Ofqual recognised version subject to certain criteria. You will be required to pay a small fee (please call 01327 262 255 or email training@locksmiths.co.uk for details).

Passing the exam is a fantastic way to demonstrate your skills and knowledge as a locksmith, and now you'll have a nationally recognised qualification as well!

You must take and pass the Exam to become a Qualified Master Locksmith (QML) and have at least one QML member per five locksmith staff to become an approved company.

WAYS TO TAKE THE EXAM

One day – no coaching, all four modules

The first is to blitz it all in one day; come to the MLA's examination facility and do all four modules in a single day. This option provides a way for those who want to minimise the amount of time spent away from work but is quite an intensive day to say the least.

Individual modules

Sit the exam at your own pace by taking the individual modules separately, in the order you wish and at the speed you feel comfortable with giving you the option to focus on each aspect independently.

Two day – with coaching

The final option is to take the exam with coaching which, continues to prove its worth with excellent feedback from those who've taken the exam via this route.

Introduced to give candidates some refresher coaching prior to each module exam, this is a good option if you're unsure of exactly what the invigilator is looking for in a successful pass.

Prior to each module you'll receive some refresher instructions/demonstrations and a lecture appertaining

continued overleaf

to the module in question with some hands-on practice if applicable. A full demonstration of the key making is given, and good and bad examples of the lock opening and lock fitting are shown. After you've been coached on an individual module, you'll sit the exam under strict exam conditions.

Two modules are completed each day, and lunch is provided. Candidates can choose to only take certain elements rather than all four if they so wish. It is also possible to re-sit modules that may have been failed with this two-day option, whereas with the one-day exam, due to time constraints, this is not possible.

Having continued to run many of these events, we are delighted to confirm that they continue to work very well, with a large take up, feedback from those doing it being particularly positive and pass rates continuing to be high (without lowering the criteria!).

Those who have taken this route have felt that settling them down at the start and alleviating their nerves and knowing what we were looking for as a finished result were major factors in their success.

New – Exam Preparation Day

For those unsure if they are ready for examination, you now have the option to attend our exam preparation day. A hands on 'Mock' experience of doing your exams.

You'll learn exactly what is required from you to pass your exams allowing you to confidently understand and practise the areas you are weakest at ready for your actual examinations.

This is ideal for anyone who believes they're ready but lack confidence, to those who want to have a larger understanding of the Exams, so they have the best shot of passing first try.

For details on how to take the MLA Exam simply contact head office on 01327 262 255 or email training@locksmiths.co.uk

Alternatively, use this code for more information and to book!

“

I've got to say that the weekend was run very professionally with excellent guidance throughout and nerve steadying advice too

SECURITY RELATED STANDARDS OVERVIEW.

At any given time there are approximately 30,000 standards within the UK and many more European standards being used covering a wide range of products and services.

Standards are under constant review to make sure they are relevant and do not contradict each other. Standards provide the test criteria for independent test houses (such as Sold Secure) to accredit products and confirm they have been manufactured to a minimum requirement. The following overview is a breakdown of locksmith related standards (not exclusively) that people working within the industry should at least be aware of and ideally know what standards apply and when.

STANDARD IDENTIFICATION NUMBER

BS 3621:2017

Title: Lock Assemblies Operated by Key from Both Inside and Outside of the Door

The original lock standard first drafted in the 1960's and still the base for all of the lock standards that are cross referenced in it. 3621 was intended for 5 lever mortice locks fitted to wooden doors and is intended to be used on domestic properties. The key-key application of this locking device makes it unsuitable for properties with single exits. The latest version was amended in 2012 to satisfy legal issues within the wording of the document. The UK was able to retain the following BS standards because of the GVA that was not included in BS EN 12209 and BS EN 1303 however BS 3621 was bought into line with 12209 and 1303 in 2004.

BS 8621:2017

Title: Lock Assemblies Operated by Key from the Outside of the Door and by Handle or Thumb Turn from the Inside of the Door

Introduced in 2004, 8621 has the same test criteria as 3621 but is intended for use on locking devices that require no key to achieve egress. Single exit and multiple occupancy dwellings require keyless egress as per fire regulations. The 2012 amendments were as per 3621.

BS 10621:2017

Title: Lock Assemblies in which the Operating Mode can be Switched Between the Normal BS 3621 Operating Mode and a Secure Mode in Which No Egress is Possible

Introduced in 2007, 10621 also has the same test criteria as 3621 and is a hybrid of the two previous standards. 10621 locks should not be used in single exit dwellings because of the entrapment possibilities. Amendments made in 3621 and 8621 in 2012 are mirrored here.

BS EN 12209:2016 (latest version out for public comment)

Title: Building Hardware – Locks and Latches – Mechanically Operated Locks, Latches and Locking Plates-Requirements and Test Methods

This European standard covers requirements and test methods for all types of mechanical lock or latch (including associated or separately supplied locking plates), intended for use on pedestrian doors in buildings but excludes electro-mechanically operated locks and striking plates, multi-point locks and their locking plates, locks for windows,

padlocks, locks for safes, furniture locks and prison locks. This standard is in harmony with the *621 series of standards apart from the GVA that is unique to the UK.

BS EN 1303:2015

Title: Cylinders for Locks – Requirements and Test Methods

This European standard introduced in 2005 is for cylinders only. The test methods are in line with the *621 series of standards except for the GVA.

PAS 24:2022

Title: Enhanced Security Performance Requirements for Doorsets and Windows in the UK

Adapted with input from Secure by Design, PAS 24 is intended to provide the minimum requirements for whole door sets in new build dwellings. PAS 24 takes into consideration all aspects of a door including fixings and hinges etc. The lock requirements cross reference to 3621, 8621 etc. PAS 24 was rewritten to include BS 7950 in 2012.

PAS 3621:2011

Title: Multipoint Locking Assemblies – Keyed Egress

A family of standards that mirrors BS 3621 but for multipoint locks.

PAS 8621:2011

Title: Multipoint Locking Assemblies – Keyless Egress

PAS 10621:2011

Title: Multipoint Locking Assemblies – Dual mode Egress

BS EN 1125:2008 (under review)

Title: Building Hardware. Panic Exit Devices Operated by a Horizontal Bar, for use on Escape Routes. Requirements and Test Methods

Experience relating to escape from buildings and general safety have made it desirable that doors at exits in public buildings, places of entertainment, shops etc., should be fitted with panic devices operated by a horizontal bar. The emphasis for products covered by this standard is on safe exit rather than security.

continued overleaf

BS EN 179:2008 (under review)

Title: Building Hardware. Emergency Exit Devices Operated by a Lever Handle or Push Pad, for use on Escape Routes. Requirements and Test Methods

This standard covers devices to be used in emergency situations where people are familiar with the emergency exit and its hardware and therefore a panic situation is most unlikely to develop. Lever handle operated escape mortice locks or push pads may therefore be used.

BS 8607:2014+A1:2016

Title: Mechanically Operated Push Button Locksets

Published in 2014 following information from Secured by Design that push button locksets were being used on some new build apartments. There are 5 levels of security that can be tested to and the highest levels (4 or 5) is intended to confirm that a push button lockset is at least as secure as a BS 3621 lock.

BS EN 12320:2021

Title: Building Hardware, Padlocks and Padlock Fittings

This European standard specifies performance requirements and describes test methods for strength, security, functions and corrosion of padlocks and padlock fittings used in building applications, but excluding cables and chains.

Requirements which relate to security are classified in six grades, based on performance tests that simulate attack. This standard now contains an attack test with a limited tool list based on three, five and 10 minutes.

BS EN 14450: 2017+A1:2023

Title: Secure storage units. Requirements, classification and methods of test for resistance to burglary. Secure safe cabinets

This European standard specifies performance requirements and describes test methods for strength and security functions of secure safe cabinets to S1 and S2.

BS EN 14846:2008 (under review)

Title: Building Hardware – Locks and Latches – Electromechanically Operated Locks and Striking Plates

BS EN 1627 – 1630:2021

Title: Pedestrian Doorsets, Windows, Curtain Walling, Grilles and Shutters. Burglar Resistance

SOLD SECURE

Sold Secure is an independent test house that has its own test specifications based on the standards listed (sometimes using several standards in one specification). Sold Secure has 40-plus specifications that are constantly reviewed by industry stakeholders and is recognised by Police groups (ACPO), Insurers and other test houses. Some of the locksmith related specifications include:

- **SS 301:2015 – Specification for Mechanical Security Systems for Domestic Buildings**
- **SS 303:2020 – Specification for High Security Padlocks**
- **SS 304:2008 – Specification for Domestic Safes**
- **SS 306:2008 – Specification for Mechanical, Domestic Door and Window Security Systems**
- **SS 308:2008 – Specification for Mechanical, Commercial Doors and Window Security Systems**
- **SS 312:2019 – Specification for Cylinders for Locks**

A revised Diamond level that tests cylinders against snapping. Secure by Design recommend SS 312 Diamond cylinders. SS 312 is a stand alone cylinder test that improves security just by changing the cylinder.

- **SS 314:2009 – Specification for Security Cabinets**
- **SS 315:2022 – Specification for Externally Mounted Key Safes**
- **SS 323:2020 – Specification for External Perimeter Fencing and Gates**
- **SS 504:2024 – Specification for Smart Locks in use within Domestic and Similar Buildings**

DHF TECHNICAL SPECIFICATIONS

TS 003:2012

Title: Door Chains and Limiters

Published in 2012 this specification gives a simple pass/fail test for loads on door chains and restrictors. It replaces a very complicated test specification that was very costly to achieve and therefore manufacturers chose not to use it. The rewrite happened in late 2012 and product should begin to be tested to it in the near future.

TS 007:2014 +A2:2018

Title: Enhanced Security Performance Requirements for Replacement Cylinders and/or Associated Security Furniture

A DHF technical specification that tests for security of cylinders or a combination of security handles and cylinders together. A star rated system that needs three stars for the minimum requirement can be achieved with either a three star rated cylinder or a one star rated cylinder and two star rated handle.

DHF TS 007-2:2019

Title: Enhanced Security Performance Requirements. Part 2 – for Mechatronic Cylinders and/or Associated Hardware

TS 008:2022

Title: Enhanced Security and General Requirements for Letter Plate Assemblies and Slide Through Boxes

A totally new test. This specification provides a means of evaluation against opportunistic attack and employs human intervention testing.

TS 009:2019

Title: Enhanced Security and General Requirements for Letter Box Assemblies that are Free Standing or Surface Mounted and Where Mail is Retrieved from the Same Side as Delivery

This is also a new test specification that provides a means of evaluation against opportunistic attack to try and prevent the contents/letter box being removed and assess the product against potential arson attack.

TS 010:2016 + A1:2019

Title: Electromagnetic Locking Devices Performance Requirements and Test Methods

For security, durability, fire and environment for electromagnetic locking devices.

TS 621:2018

Title: Thief Resistant Electromechanically Operated Lock Assemblies

A technical specification that describes performance requirements for single or multipoint thief resistant electromechanical lock assemblies including the lock interface, striking plate, fixing screws, fitting instructions and where appropriate, cylinders and protective furniture.

OTHER STANDARDS USED FOR REFERENCE:

- BS 5357 – Code of Practice for Installation of Security Glazing
- BS 5544 – Specification for Anti-Bandit Glazing (Glazing Resistant to Manual Attack)
- BS 6206 – Specification for Impact Performance Requirements for Flat Safety Glass and safety Plastics for use in Buildings
- BS 6262 – Part 4 Glazing in Buildings – Safety Related to Human Impact
- BS 7950 – Specification for Enhanced Security Performance of Casement and Tilt/Turn Windows for Domestic Applications (now Included in PAS 24 for the UK)
- BS 8213-4 – Windows, Doors and Roof lights Part 4. Code of Practice for the Installation of Replacement Windows and Doorsets in Dwellings
- BS 8220-1 – Guide for Security of Buildings against Crime – Part 1 Dwellings
- BS EN 1906 – Building Hardware – Lever Handles and Knob Furniture – Requirements and Test Methods
- BS EN 1935 – Building Hardware – Single-Axis Hinges – Requirements and Test Methods
- BS EN 13724 – Postal Services – Apertures of Private Letter Plates – Requirements and Test Methods

5-PIN & 10-PIN CYLINDERS

OUR V5 & V10 RANGE OF CYLINDERS ARE AVAILABLE IN A WIDE RANGE OF SIZES, STYLES AND FUNCTIONS, AND ARE SUITABLE FOR BOTH DOMESTIC AND COMMERCIAL USE.

V5 5-PIN ARCHITECTURAL CYLINDERS

- Ability to key to customers specific requirements with keying options KTD, KA and UMK.
- Euro profile, oval profile & rim cylinders also classroom cylinders available.
- Entry level security.

AVAILABLE IN: EURO SINGLE, EURO DOUBLE, EURO DOUBLE OFF-SET, EURO CYLINDER & TURN, EURO CYLINDER & TURN OFFSET, RIM CYLINDERS, UK OVAL AND SCANDINAVIAN OVAL.

V10 10-PIN RESTRICTED CYLINDERS

- Restricted keyway for applications that require higher key security.
- Ability to key to customers specific requirements with keying options KTD, KA and UMK.
- Euro profile, oval profile & rim cylinders also classroom cylinders available with added construction key facility available within this range.

Adjustable CAM

AVAILABLE FINISHES: POLISHED CHROME, SATIN CHROME, POLISHED BRASS, SATIN BRASS, POWDER COATED BLACK AND SATIN BRONZE.

MLA 2023 PR REVIEW.

SKY NEWS– JULY 2023

The Master Locksmiths Association featured on Business Live with Ian King, where Steffan emphasized the significance of opting for an MLA Approved Company instead of relying on search engines when in need of a locksmith.

BBC THIS MORNING – SEPTEMBER 2023

The Master Locksmiths Association took part in a BBC episode of This Morning in September 2023 regarding Rogue Locksmiths, we provided advice on how to prevent being overcharged.

RIGHTMOVE ADVERTISING CAMPAIGN

In 2023 we ran an advertising campaign at new home owners on the Rightmove website pointing users towards the MLA website.

OURWATCH NEWSLETTER

MLA PROMOTION.

The MLA has helped people in UK feel safer in their homes for over 60 years.

By promoting the vetted, inspected and qualified locksmiths from the industry who agree with the motto of "Skill and Integrity", the merits of the association have been recognised by authorities such as the Police, Secured By Design, Insurers, Neighbourhood Watch, governmental websites, training websites and many others.

Over the past few years, The MLA has enjoyed recommendations from all of the above, a fact that strengthens our credibility and capabilities.

The authorities' guidance regarding the use of locksmiths was summed up as follows: if you need a locksmith that is well trained, trustworthy and capable to do the job, then Master Locksmith Association will be the place to go to.

MLA POINTED TOWARDS BY POLICE

What do the Police and MLA have in common? Both work towards offering people across UK the feeling of safety and security, therefore our association is highly recommended on the authorities' websites in articles related to crime and theft reduction:

POLICE SCOTLAND

Some other tips include:

- Doors should be fitted with a 5 lever mortice deadlock to BS 3621 standard or a Euro Profile Cylinder lock to TS007 3 star standard
- Door frames should be strong enough to support the door, hinges and lock.
- If the door is not a 'multi - point locking' door, fit mortice bolts at the top and bottom of the door and hinge-bolts give additional resistance
- External timber doors should be solid core and a minimum of 45 mm thick.
- UPVC doors should be to PAS024:2016 standard as below
- New / replacement doors should be manufactured and installed to meet standards PAS 024:2016 or equivalent
- Glazed panels within or adjacent to the door should have laminated glass in at least the inner pane to standards P1A
- Letterboxes should have an internal cover plate and not be at floor level. This means that mail drops down and can't be taken from outside
- If you are replacing your letter-plate, look to replace it with a letter-plate to TS008 standard
- Fit a door viewer and a door chain
- Don't leave keys in the door. They could be turned or stolen through the letter-plate if a standard letter-plate is fitted
- Think about having your door reinforced with a security door bar
- Ask the manufacturer/supplier before fitting any extra locks to double glazed windows or doors
- Windows should have internal beading to avoid the glass being removed from the outside. Some systems which have external beading are secure because the glass is adhered to the frame or secured by special tamper-proof clips. This can be checked by consulting the manufacturer
- New / replacement windows should be manufactured and installed to PAS024:2016 or equivalent. This indicates set specific standards of design and security for windows.

Secured By Design or the Master Locksmiths Association more information about security standards.

CAMBRIDGESHIRE POLICE

1. Laminated glass or security film is recommended for ground floor and accessible windows.

2. Sash stops prevent anyone opening the sash window enough to climb through.

3. Key operated locks are recommended for window types that open out, rather than up, and are ground floor or accessible windows. Remember, window locks are only effective if used, so check that you have locked them before you leave home or go to bed.

4. Window opening restrictors allow you to ventilate your home but make sure they can't be picked and unlocked from outside.

If you're replacing your windows, always consider a security accredited product as these windows are tested to British standards and are insurance approved. A good standard is PAS 24 2016.

A locksmith belonging to the Master Locksmiths Association can suggest the correct standard of window lock and offer advice on upgrading window security.

MET POLICE

Door security

Your home is only as secure as its weakest point of entry. That's why it's so important to have doors and windows that are as secure as possible. Follow our advice and help keep potential burglars out.

Whether you live in a flat or a house, your front door will always tell a thief the level of security surrounding your home. If it looks really secure and burglar-resistant, then they'll think twice about trying to gain entry.

A locksmith belonging to the Master Locksmiths Association will check to see if your door is secure and made of solid timber or a robust composite. The locksmith can also reinforce the frame and check if the locks and hinges are British Standard approved.

Sitting patio doors are vulnerable to forced entry, so do check that yours have an anti lift device fitted so they can't be lifted out of the frame.

Some UPVC doors are fitted with locks that protrude from the frame on the outside (euro profile locks for those in the know). If yours do, then consider getting a locksmith to change the lock to a shorter one that can't be snipped off.

SECURED BY DESIGN

Guidance Services Member Companies IoT Group Initiatives About Contact

Products that have been through this security standard, the door locks to which it refers, have a great chance of being a genuine product, offering security, control and the ability to deter or prevent crime – and these products or services are known as being of a 'Police Preferred Specification'.

Police Preferred Specification ensures that products have been independently tested to a relevant security standard and fully certified by an independent third-party, United Kingdom Accreditation Service (UKAS) certification body, or tested and certified by an approved body such as Sold Secure or Thatcham. In addition, Police Preferred Specification requires regular re-testing and annual inspection of the manufacturing facility to ensure quality and performance are maintained (by a UKAS body). This provides assurance that products have been produced under a controlled manufacturing environment, in accordance with the specifier's aims and minimises misrepresentation of the products by unscrupulous manufacturers/suppliers.

Better quality means these products last longer too, making them more cost effective and leading to greater sustainability in crime prevention.

Much research has been undertaken to look at the effectiveness of doors and windows which have achieved SBD's Police Preferred Specification. A study of 1520 properties on two Nottingham City Homes estates that had SBD windows installed found that, compared to pre-installation, burglary was reduced by 42% compared to a city wide reduction of 21%.

If you are replacing a broken or defective lock, or looking to improve the security of existing doorsets, a Locksmith registered with the Master Locksmiths Association can specify the best & most secure door lock to use for your type of door.

PROTECT UK

Log In MENU

Garages, outbuildings and sheds ✓

Doors, windows and locks ✓

A large proportion of newly built properties have been awarded 'Secured by Design (SBD)' certification, which means that they have had attack tested doors and windows installed under the SBD Scheme.

Some existing properties have had their doors and/or windows replaced with attack tested products that meet BS PAS 24:2016 or the equivalent, which includes the door and/or window, frame, locks, fittings and glazing. If there is documentation to confirm that this is the case, the measures detailed in this section will not be required.

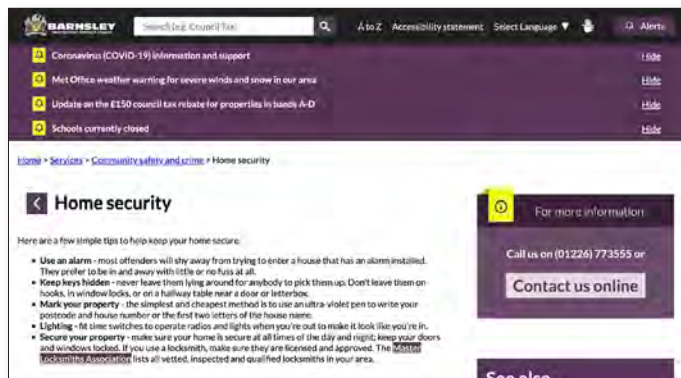

Alternatively there may be documentation to prove that an existing building has had the doors and/or windows replaced to the above standard.

For further information: www.securedbydesign.com

Further advice around secure locks for doors and windows can be found on the [The Master Locksmiths Association \(MLA\) website](http://The Master Locksmiths Association (MLA) website).

Home security

Here are a few simple tips to help keep your home secure:

- Use an alarm - most offenders will shy away from trying to enter a house that has an alarm installed. They prefer to be in and away with little or no fuss at all.
- Keep keys hidden - never leave them lying around for anybody to pick them up. Don't leave them on hooks, in window locks, or on a hallway table near a door or letterbox.
- Mark your property - the simplest and cheapest method is to use an ultra-violet pen to write your postcode and house number or the first two letters of the house name.
- Lighting - fit time switches to operate radios and lights when you're out to make it look like you're in.
- Secure your property - make sure your home is secure at all times of the day and night, keep your doors and windows locked. If you use a locksmith, make sure they are licensed and approved. The [Master Locksmiths Association](http://The Master Locksmiths Association) lists all vetted, inspected and qualified locksmiths in your area.

Doors

Home > [Crime prevention](#) > [Crime types](#) > [Burglary](#) > [Doors](#)

DEADLOCK or double lock all doors whether you are at home or out. Deadlocking the door with a key, bolt, or turn means the door can only be opened from your side of the outside using the correct key.

Beyond the key you can use a handle to prevent a burglar from reaching through the letterbox or catflap or slipping a window and glazing your key - but make it impossible to use if an emergency fire PFD or composite door fitted with a multi-point lock, the act of putting up the door handle or sliding the door will not secure the property - you must also deadlock using a key or turn.

DOORS AND FRAMEWORK

Door security is paramount. Depending on the type of door you have fitted and the materials it is made from, it will likely require a different type of lock. A British Standard (BS) fire-rated door will need a BS-rated lock. For fire-rated doors to be suitable for use in fire-rated areas, a multi-point lock that uses rods is necessary for PFDs and composite doors. [Borealis](#) (approved by the Master Locksmiths Association) can specify the most secure door lock standard for any type of door and area of concern.

MLA GUIDELINES FOR MINIMUM SECURITY FOR DOMESTIC PROPERTY.

ACKNOWLEDGEMENTS

The Master Locksmiths Association is grateful to the following organisations for their support and assistance in drawing up these guidelines:

- National Police Chiefs Council (NCPP)
- British Hardware Federation
- Builders' Merchants Federation (BMF)
- Chief Fire Officers Association (CFOA)
- Door and Hardware Federation (incorporating Door and Shutter Manufacturer's Association and Association of Building Hardware Manufacturers)
- Glass and Glazing Federation (GGF)
- Guild of Architectural Ironmongers (GAI)
- Home Office Scientific Development Branch (HOSDB)
- RISC Authority (UK insurers technical advice body)
- Lloyds
- Sold Secure (part of MLA Group)
- Secure by Design

Note: These guidelines give a general description of security for domestic buildings. Neither the guidelines nor the list guarantees that these methods are suitable for specific applications. It is the responsibility of the equipment supplier and/or equipment purchaser to ensure that any system is suitable for its particular application and that it complies with all legislation, standards, codes of practice or any other requirement.

Every effort has been made to ensure the contents of these Guidelines are accurate, however, the Master Locksmiths Association does not accept any responsibility for loss arising from decisions based upon them.

1. INTRODUCTION

Theft from domestic property causes major problems for the Insurance industry and for specifiers of security products who might not be familiar with the industries involved. The reasons for these guidelines are:

- The Insurers possible requirement on a policyholder to maintain a minimum level of security to protect their premises, to use it when the premises are unattended or in part when they are occupied.
- The general obligation of householders to take reasonable security precautions for their own good.
- To provide easily understood information for the use of those not familiar with the Security or Insurance industries.

These guidelines are not intended to be applied to new construction or major refurbishment. For these applications PAS 24:2022 Enhanced security performance requirements for doorsets and windows in the UK (the latest version of PAS 24 includes the requirements of BS 7950) apply. These specifications are based on complete doorsets and window assemblies i.e. the door or window, including frame, hinges, locks, and fixings as a whole unit. The specifier is recommended to obtain doors and windows certified to these specifications.

Further guidance is given in **BS 8220-1: Guide for security of buildings against crime – Part 1:2000 – Dwellings**

Currently European specifications **EN 1627-1630** also exist for the security of doors, windows and shutters. Products certified to the appropriate grades of these specifications are equally suitable.

These guidelines assume that occupants are all able bodied. For users with disabilities, seek professional guidance before any installation.

Every attempt is made in these guidelines to be as practical as possible with recommendation or the specification of products, but there will always be occasions where alternatives will need to be sought because of the nature of a particular design, size or other feature of a door or window to be secured. In these circumstances the advice of a specialist in this field should be taken. A member of the Trade Division of The Master Locksmiths Association (denoted as "MLA approved company" and accompanied by the MLA registration number) should be contacted for such advice which should then be checked with the Insurers where applicable.

To comply with the requirements of most Insurers for thief resistant lock assemblies that necessitate the use of a key for egress, it is generally accepted that locks used on traditional external timber doors are certified to **BS 3621:2017 Thief resistant lock assemblies – Keyed egress**. This indicates that the lock is part of an on-going test and audit programme to show it meets the requirements.

The MLA recommends that locks conforming to the latest version of any standard are to be used, however the MLA also recognises that insurers will on occasion accept locks, already installed that conform to earlier versions.

Where there is a requirement for means of escape (from fire) from the inside without the use of a key while maintaining security from the outside, lock assemblies to **BS 8621:2017 Thief resistant lock assemblies – Keyless egress** should be installed.

Certifying to BS 8621 commenced in April 2005 and lock assemblies certified as complying with this Standard are listed within the links in Appendix C.

The introduction of new materials (e.g. aluminium, PVC-U and composite materials) and designs used in the construction of doors and windows can make single point locking inadequate. The locks designed for these types of doors are usually multi-point and therefore cannot be tested to **BS 3621, BS 8621 or BS 10621**. **PAS 3621, PAS 8621 and PAS 10621** were published in 2011 and will provide minimum requirements for multi-point locks to be tested to. Locks produced prior to this date should have a minimum of three locking points and use a cylinder that meets the minimum requirement stated in 3(b).

Nothing in this document or related documents shall imply that the installation of any security device will prevent unauthorised entry to a premise or that by following these guidelines insurers are obliged to issue insurance cover.

2. GENERAL CONSIDERATIONS

When considering the matter of minimum security requirements and the interpretation of these guidelines, users of these guidelines should be mindful of a number of factors:

- The adequacy of the door or window, frame thickness and the material quality together with the fixings of the frames to the surrounding structure might impact on the level of security provided.
- A degree of flexibility when imposing security requirements might, on occasions be necessary. Often, due to the nature of the door or window construction, or the material from which it is constructed, it might require the use of locks or locking devices in situations other than that for which they were intended. In such circumstances the advice of a trade member of the Master Locksmiths Association should be sought, and written confirmation of their proposals obtained from any interested insurer.
- If improvements are required to the security of aluminium, PVC-U or composite material doors or windows it is stressed that this work should be undertaken by professionals. Again, advice must be sought from an Approved Company Member of the Master Locksmiths Association who has experience in this type of work. Care should be taken not to breach manufacturers' warranties that might still apply.
- It must also be appreciated that some locks not certified to BS 3621 have in the past and could in the future be accepted by Insurers. Where this is the case, written confirmation by the Insurers of their acceptance of the product for its intended use should be obtained by the end-user. This recommendation also applies with the introduction of lock assemblies under BS 8621 and BS 10621.
- Insurers and specifiers should be mindful of possible conflict between occupier safety and security when the property is occupied. Careful consideration must be given to the means of escape in the event of fire before specifying that locks should be engaged and the keys removed (using BS 3621:2017 specification) before retiring for the night. Keys should be kept within easy reach of the occupant, but out of reach of an intruder.

If in doubt, consult any interested insurer and the local fire prevention officer for guidance.

- External doors that are deemed to be used as an exit in case of an emergency should be locked in the manner specified for the final exit door, with the addition of a lock that can be opened from the inside without the use of a key for use when the property is occupied. Where locks to BS 8621:2017 are fitted, egress will be facilitated from the inside by the presence of the thumb turn.

continued overleaf

- (g) In blocks of flats and other buildings of multiple occupancy, the means of escape in the event of fire is an important consideration, particularly where the entrance door to the individual flat is the only means of escape. The use of escape locks that can be opened from the inside by a single action without the use of a key (but still retain their security from outside as described in BS 8621) is acceptable to Insurers subject to written confirmation. This type of lock will normally meet the requirements of the Building Regulations.
- (h) New products may become available that conform to test procedures for security products, and carry the appropriate certification mark. When these are accepted by the organisations supporting these guidelines, and where suitable for the protection of a particular risk, their use should be encouraged.
- (i) When making recommendations for the fitting of security items, consideration must be given to the type of risk involved relevant to the location of the premises. It will be necessary to increase the number of locks and fittings to doors and windows in high-risk areas. Advice should be sought from the local crime prevention design adviser, architectural liaison officer, any interested insurer involved or an Approved Company Member of the Master Locksmiths Association.
- (j) A list of Approved Company Members of the Master Locksmiths Association, recognisable by the logo 'MLA Approved Company', is available from the Master Locksmiths Association. This list is also reproduced and updated on our website: www.locksmiths.co.uk.

3. MINIMUM SECURITY REQUIREMENTS

- (a) Locks currently available certified to British Standard BS 3621, BS 8621 or BS 10621 should bear the standard number and the mark of the certification agency. These are listed in the web links in Appendix C. Such locks may be available in rim or mortice fixing. Locks for PVC-U and composite doors (when multi-point) should meet the minimum requirement set out in PAS 3621, PAS 8621 and PAS 10621 published in 2011. Locks produced prior to this date should have at least three locking points and be combined with a cylinder that meets the requirements of 3(b). Locks that have been part of a PAS 24 door test are also acceptable. Written agreement for the acceptance of such locks should be obtained from the insurer by the policyholder.
- (b) Lock cylinders installed before the implementation of these guidelines (November 1999) should have a minimum of five pins and an anti-drill insert. Thereafter, as a minimum requirement the cylinder shall meet the requirements of BS EN 1303:2015. Clause 6.8 Key related security Grade 5 (Table 9) and Clause 6.9 Attack resistance Grade 2 (Table 10). BS EN 1303:2015 was published in July 2015 and tested cylinders will begin to be marked with this date. Technical specifications SS 312 and TS 007 were published in 2010 and 2011 and are to be used when doors are at risk of cylinder attack and may be a requirement by some authorities. Cylinders that are Sold Secure Diamond rated have been subject to an extensive attack test and offer a significant security upgrade to any door that requires a Euro cylinder. The Master Locksmiths Association recommends that for retro fit security upgrades, SS312 Diamond cylinders should be used as a cylinder change only solution or a TS 007 one star rated cylinder combined with a two star rated handle or a TS 007 three star rated cylinder (either TS 007 solution must achieve a total of three stars to be effective against attack).

- (c) Where any cylinder operated lock is used, the outside cylinder shall not protrude more than 3mm from the face of the door or the lock furniture (handle plate or cylinder rose) where fitted. Lock furniture should be of the 'bolt through' type with the fixings being secured from the internal side only. Lock furniture should comply with BS EN 1906 Lever handles and knob furniture – Requirements and test methods – Annex A: Requirements for security lock furniture for use on burglary resistant doors – Grade 1 unless certified as a component of a door assembly satisfactorily tested to PAS 24. Lock furniture may consist of separate components of lever/knob handles on roses and cylinder roses or composite backplates. Where cylinder roses are fitted, these must provide the cylinder protection as required under BS 3621, BS 8621 or BS 10621.
- (d) A limited range of other door locks, and most types of lockable bolt or window locks, are likely to be acceptable to insurers for the purpose of securing doors and windows. A proposed (issued in 2013) guidance document on Minimum Security Standards for Domestic Properties will provide full details. This will be available for download from www.riscauthority.co.uk

4. HINGED DOOR SECURITY

The type of lock and the position to which it is fitted on the door is dictated by the design of the door. It is therefore not possible to make specific recommendations regarding the fixing positions of additional security devices, as this will be determined by the position of the original fittings on the door. The height at which the lock is fitted might also be determined by the level at which the user is standing when locking or unlocking the door, e.g. one or two steps below the door entry level.

For specific guidance, reference should be made to BS 8220 Guide for security of buildings against crime – Part 1:200 Dwellings. However, the following is offered as a general guide:

4.1 Additional Mortice Deadlocks

Where the lock to be fitted is of the mortice type, the minimum thickness of the door to which it is being fitted must be 44mm. The lock should be fitted approximately midway between the existing lock and the top or bottom of the door depending on which has the greatest unsecured distance, avoiding any cross rail or glazing bar joints.

4.2 Additional Mortice or Rim Security Bolts (Single Doors)

To be fitted horizontally (where possible) approximately midway between the top lock and the top of the door and the bottom lock and the bottom of the door.

Where a single lock conforming to the requirements of the insurance company is fitted, the additional bolts should be fitted approximately midway between it and the top and the bottom of the door.

Where bolts are fitted vertically they should be between 50mm and 100mm from the edge of the door, avoiding any joints.

For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts. Where doors do not form part of an escape route, loose key mortice bolts are suitable.

Police Preferred Specification

4.3 Additional Mortice or Rim Security Bolts (Double Doors)

To be fitted vertically to the top and bottom of the doors between 50mm and 100mm from the front of the rebated edge of the door, avoiding any joints. It could be necessary to fit security bolts to the top and bottom of the first closing leaf only, if the doors are of substantial construction.

For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts on the first opening leaf, the first closing leaf being secured by loose key bolts. Where doors do not form part of an escape route loose key mortice bolts are suitable for both leaves.

4.4 Hinge Bolts and Security Hinges

Hinge bolts shall be fitted to all outward opening doors at a position of approximately a quarter of the door height from the top and bottom of the door, but not within 150mm of the top or bottom hinges.

Hinges for use on burglar-resistant doors should comply with BS EN 1935:2002 Annex C. These may comprise either such a design that the hinge pin can only be removed when the door is open, or alternatively, suitable composite security hinges incorporating hinge bolts within the hinge flap that enable the hinge to withstand shear loads should be considered.

4.5 Letter Plates and Boxes

Letter plates fitted to doors could comply with BS EN 13724: Postal services. Secure letter plates and boxes can be tested to TS 008: 2022 and TS 009: 2019 TS 008 is quoted in PAS 24 and prevents invasive attack such as fishing.

4.6 Stable Doors

Both halves of stable doors must be treated as separate doors.

5. WINDOW LOCKS

Where windows are not required to be opened, they may be screwed permanently shut. Security screws shall be used where this is to be done from the outside, and the heads countersunk and plugged.

The security of all ground floor and all accessible windows which are not considered as means of escape (e.g. from a flat roof) shall be considered. Opening windows that are over 600mm high or wide should be fitted with a multi-point locking system or two window locks with removable keys. Sashes less than 600mm need only be fitted with a single lock.

Where a lock is to be fitted to a window care must be taken to ensure that the material to which the lock is fitted does not become weakened by fitting it too close to existing fittings.

Where a window is required for emergency egress then it shall not be fitted with any type of key lockable system. In this instance the window should be fitted with laminated glass.

5.1 Louvre Windows

Urgent consideration should be given to replacing louver windows as it is difficult to achieve adequate security. If this is not possible, then all panes of glass (in louver windows) should be securely fixed, with suitable adhesive, into their brackets or suitable grilles, bars, or shutters fitted. Louvre windows should not be installed in vulnerable locations. The use of plastic frame materials is not acceptable for a security application.

5.2 Casement Windows

Where the casement window opening exceeds 600mm, two locks are required. For side-hung casements windows over 600mm high the additional locks should be fitted approximately quarter of the height from the top and bottom of the casement window. For top or bottom-hung fanlights in excess of 600mm wide, the locks should be fitted approximately one quarter of the width of the opening fanlight from either side of the sash.

5.3 Tilt/Turn Windows

Additional locks should be fitted to the bottom rail at the leading edge for security and also to prevent the accidental opening of the window in the side hung mode.

5.4 Vertical Sliding Sash Windows

Where the window opening exceeds 600mm, the locks should be fitted on the meeting rail of the bottom sash, at approximately one quarter of the width, or on the vertical frame either side of the upper sash, directly above the meeting rail of the bottom sash.

Where there is a requirement for ventilation when the premises are occupied, vertical sliding sash windows can be provided with restricting devices suitably placed to provide a ventilation position, to allow them to be opened a maximum of 100mm and remain secure. This is not recommended when the premises are unoccupied. The window should then be secured in the fully closed position.

6. SLIDING DOORS AND WINDOWS

All sliding doors and windows should be fitted with anti-lift devices to prevent them being removed from their tracks. Care should be taken to ensure such devices are fitted appropriately so that they do not go inside the section of the frame when the door/window is closed. Some sliding door locks have an in-built facility to prevent the door being lifted, e.g. swing hook bolts which rotate upwards to engage.

Additional locks fitted to sliding doors and windows should be fitted in such a manner as to ensure any force applied to open the door acts against the lock fixing screws.

Wherever possible, additional locks should be fitted to the top and bottom of the interlock of sliding doors and windows. However, there are some designs, which make this impractical. Sliding doors/windows should not be secured in the ventilation position when the premises are unoccupied.

7. UP-AND-OVER DOORS

Work on improving the security of up-and-over doors should be undertaken by professionals who have experience in this type of work.

There are security locking products available for this type of door and the advice of a professional (MLA Trade Member) should be obtained prior to commencing improvements.

8. FRAME FIXING

It could be necessary in some instances to improve the strength of the fixings holding door or window frames to the fabric of the building. Due to the presence of pre-cast concrete, steel lintels or other construction details, it might not be possible to achieve the desired additional fixings to the head or sill of the frame. The type of fixings used will be determined by the material to be fixed and the material to which it is to be fixed, however frame-fixing screws and bolts are available for this purpose.

continued overleaf

The following dimensions for the positions of additional fixings are offered as a guide.

8.1 Corner Fixings

Additional fixings made between 150mm and 250mm vertically and horizontally from the internal corners of the frame to be fixed.

8.2 Vertical and Horizontal Fixings

Additional fixings made at approximately 600mm centres between the corner fixings of the frame to be fixed.

For greater detail of improved fixings, reference should be made to **BS 8213: Part 4:2016 Windows, doors and roof lights – Code of practice for the installation of replacement windows and doorsets in dwellings.**

9. GLASS AND GLAZING

As far as security is concerned, the main consideration is the ease with which glass can be broken to provide access to window or door hardware. The glazing specification chosen should meet the design and performance requirements of **BS 6262:2018 Part 4 Glazing in buildings – Safety related to human impact.** For those installations where a higher degree of 'security' is needed the glazing should be in accordance with **BS 5357 Code of practice for installation of security glazing.**

There are three main types of glass. These are:

9.1 Annealed Glass

Annealed glass consists of float, sheet, cast (patterns) and wired glass. It breaks easily and when broken forms large sharp fragments. While wired glass can be fractured, it will act as a barrier but only until the wire mesh in the glass is sheared.

The application of an appropriate plastics film can increase the resistance of annealed glass to penetration.

9.2 Toughened Glass

Toughened glass (tempered glass) is an annealed glass, except wired glass, that has been subjected to a heating and rapid cooling process that imparts a greater strength to the material. It is resistant to impact by blunt objects but can be fractured by penetration of the surface compressive layer. When fractured, the glass will not act as a barrier. In buildings it is usually found in 'risk areas' which include doors and adjacent windows, low windows, bathrooms, landings etc. Typically toughened glass is around eight times stronger than annealed glass, but when it breaks it forms a multitude of small fragments. It is also vulnerable to breakage with a sharp point such as a centre punch.

Due to the method in which it breaks, toughened glass offers very little security. Its value is as a safety glass.

9.3 Laminated Glass

Laminated glass consists of two or more layers of annealed glass bonded together by means of transparent plastic (poly vinyl butate – PVB) interlayers. When the glass is attacked the glass layers fracture but remain in place, held by the PVB interlayer. Thus, laminated glass offers both increased security and safety over annealed glass. Typical laminated glass found in domestic buildings consists of two layers of glass and one interlayer to a total thickness of 6.4mm (soon to increase to 6.8mm). However, the number of glass layers and interlayers can be increased to provide enhanced security such that, eventually, bullet-proof glass can be produced.

The most common failure mechanism of laminated glass is for it to 'balloon' and fall out of the frame under repeated impacts.

However, the time taken for this gives an enhanced level of security over other types of glass.

9.4 Double Glazing

Double glazing can be in the form of:

1. **Insulating glass units** i.e. two or more panes of glass hermetically sealed at their perimeter. These provide the intruder with two or more panes to break.
2. **Double windows** i.e. two separate single glazed windows in the same opening. These assemblies provide a similar deterrent but only if the inner window is secured.

9.5 Plastics Glazing Material

Plastics glazing sheet material consists of either a single sheet or combination of sheets laminated together. The performance of these materials is dependent on the polymer type, thickness, and support condition. The advice of the manufacturer should be sought in respect of their security and fire resistance performance, as appropriate.

9.6 Glazing

All glass or plastics glazing sheet material should be secured to the window or door structure in such a manner that it cannot be easily removed from the outside.

10. GLOSSARY

Anti-lift device – Device which prevents a door or window from being lifted in its aperture, where this lifting would decrease the effectiveness of a lock or enable the door/window to be removed.

Barrel bolt – Surface mounted fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening. The shoot is provided with a knob, loose key or similar for operation by hand.

Bolt (1) – Movable part of a lock or latch that usually engages a component fixed to a frame and is withdrawn into the case.

Bolt (2) – Fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the sliding part being provided with a knob, loose key or similar for operation. It may be surface mounted, or morticed.

Certified – A product subjected to a testing and ongoing audit programme by a MLA approved organisation.

Deadlock – Lock that contains only a deadbolt.

Escape lock – Deadlock that can be opened (even when locked) from the inside by a single action without use of a key.

Escutcheon – Surround with a shaped hole, with or without a pivoted cover plate, primarily to protect the door leaf from abrasion damage caused by key insertion. This could be for decorative purposes or to increase the security of the locking device.

Flush bolt – Recessed (flush) fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the moving part being provided with a lever, slide bar or knob.

Hasp and staple – Two-piece fastening for doors which can be secured by a padlock. The hasp could be attached to a fixed or swivel bar.

Hinge bolt – Fixed projection on the hinge side of the door or window. The projection engages into a keep when the door or window is closed. Also known as dog bolt. **Latch** – Self-engaging device, usually operable from both sides, which holds a door or window in the closed position and is released by hand without the use of a key.

Lock – Fastener that combines within one case a latch operated by a handle and a deadbolt which secures the door or window in the closed position.

Mortice lock/bolt – Lock/bolt where its body is fitted in a mortice cut into the closing edge of the door or window.

Multi-point lock – Lock that has a latch bolt and a number of other bolts positioned remote from the lock case but connected by rods, which are thrown by means of a single action.

Night latch – Latch with a single bevel latch bolt that is operated internally by a knob and externally by a key which automatically engages when the door is shut.

Night vent or ventilation position – Position in which the door or window can be secured whilst slightly ajar. This usually offers only limited security.

Padbar – A device spanning the full width of the door opening with supporting brackets or staples fixed to the frame and secured by a padlock.

Padbolt/padlock bolt – Door bolt which can be secured in the locked position by means of a padlock.

Rim lock/bolt – Lock/bolt for fixing on the face of a door or window.

Security bolt – Mortice or barrel bolt which can only be withdrawn by the use of a key.

Security screw – Screw designed so that it either cannot be removed when fixed or which requires a restricted access tool to remove it.

Strike plate – Flat metal plate, appropriate to the latch or lock, fixed to a frame to engage a bolt(s).

Throw – bolts with linear movement – Distance that the dead bolt travels from the fore end of the lock in an outward direction under the action of a key, measured perpendicular to the fore-end.

Throw – hook bolts with arcuate movement – Distance from the tip of the bolt travels from the unlocked to the locked position measured parallel to the fore-end of the lock.

11. STANDARDS

The following standards are referred to in the text. The latest version of the standard shall be used.

- **BS3621** - Lock Assemblies Operated by Key from Both Inside and Outside of the Door
- **BS 5357** – Code of practice for installation of security glazing.
- **BS 5544** – Specification for anti-bandit glazing (glazing resistant to manual attack).
- **BS 6206** – Specification for impact performance requirements for flat safety glass and safety plastics for use in buildings.
- **BS 6262** – Part 4 Glazing in buildings – Safety related to human impact.
- **BS 7950** – Specification for enhanced security performance of casement and tilt/turn windows for domestic applications (now found in PAS 24).
- **BS 8213-4** – Windows, doors and roof lights Part 4. COP for the installation of replacement windows and doorsets in dwellings.
- **BS 8220-1** – Guide for security of buildings against crime – Part 1. Dwellings.
- **BS 8607** – Mechanically operated push button locksets.
- **BS 8621** – Lock Assemblies Operated by Key from the Outside of the Door and by Handle or Thumb Turn from the Inside of the Door

- **BS 10621** – Lock Assemblies in which the Operating Mode can be Switched Between the Normal BS 3621 Operating Mode and a Secure Mode in Which No Egress is Possible
- **PAS 24** – Enhanced security performance requirements for doorsets and windows in the UK.
- **PAS 3621** – Multipoint locking assemblies – keyed egress.
- **PAS 8621** – Multipoint locking assemblies – keyless egress.
- **PAS 10621** – Multipoint locking assemblies – Dual mode.
- **BS EN 12209** – Building hardware – locks and latches.
- **BS EN 1303** – Building hardware – Cylinders for locks.
- **BS EN 1906** – Building hardware – Lever handles and knob furniture.
- **BS EN 1935** – Building hardware – Single-axis hinges.
- **BS EN 12320** – Building hardware – Padlocks and padlock fittings.
- **BS EN 13724** – Postal services – Apertures of private letter plates.
- **SS 301** – Sold Secure Specification for Mechanical Security Systems for Domestic Dwellings.
- **SS 306** – Sold Secure Specification for Mechanical, Domestic Door Security Systems.
- **SS 312** – Sold Secure Specification for Cylinders for Locks.
- **SS 323** – Sold Secure Specification for External Perimeter Fencing and Gates.
- **SS 504** – Sold Secure Specification for Smart Locks in use within Domestic and Similar Buildings
- **DHF TS 621** – Thief resistant electromechanically operated lock assemblies.
- **DHF TS 007** – Enhanced Security Performance Requirements for Replacement Cylinders and/or Associated Security Furniture.
- **DHF TS 008** – Letter plates Enhanced security and general requirements for letter plate assemblies and slide through boxes.
- **DHF TS 009** – Letter boxes Enhanced security and general requirements for letter box assemblies that are free standing or surface mounted and where mail is retrieved from the same side as delivery.

APPENDIX A

Hardware required to be fitted (as listed in Appendix B)

Hinged final exit door	A plus B, C or D, or T
Other single hinged external doors	A plus B, C or D, plus L (2 off), or T
Pedestrian doors on garages and domestic outbuildings	A plus B, C, D or V, or T
Double doors (1st closing door)	A plus L (2 off) or M (2 off)
Double doors (2nd closing door)	A plus B, J or N
Sliding doors	E plus F C, G, or H
Louvre windows	See text
Accessible windows and ground floor openings (But not emergency egress windows)	L, P, Q, S or U A sash less than 600mm in width or height requires a minimum of one locking point. For all other sashes a minimum of two locking points is required

continued overleaf

APPENDIX B

Specification of acceptable hardware

A)	All doors	Hinge bolts or security hinges with protection from hinge pin removal on all outward opening doors.
B)	All doors	A lock certified to BS 3621, BS 8621 and BS 10621 together with its approved striking or box plate and accessories as tested.
C)	All doors	An acceptable alternative lock with the lock manufacturers approved striking or box plate and accessories as approved by the Insurers.
D)	Single door Pedestrian garage doors	A multi-point lock system with a minimum of three horizontal locking points with a central bolt (minimum throw 13mm) and two dead or hook bolts (minimum throw 20mm). All locked simultaneously by one operation of the key. Alternatively a multi-point lock certified to Sold Secure specification SS 306 or PAS 3621.
E)	Sliding	Anti-lift devices.
F)	Sliding	Main locking system plus key operated patio door lock or security bolts (minimum throw 9mm) at the interlock at bottom of the door and if practical at the top of the door. Alternatively a patio bar.
G)	Sliding	A hook lock certified to BS 3621 or BS 8621 together with its approved striking plate and accessories as tested.
H)	Sliding	A multi-point lock system with a minimum of three horizontal locking points Incorporating hook bolts (minimum throw 20mm) and/or vertical shoot bolts (minimum throw 14mm) locking into the head and sill of the door frame. All locked simultaneously by one operation of the key. Alternatively a multi-point lock certified to Sold Secure specification SS 306.
J)	Double doors – 2nd closing leaf (casement doors)	The main locking system plus two key-operated rim or mortice security bolts (minimum throw 14mm).
L)	Double doors – 1st closing leaf (casement doors) Windows	Two key operated rim or mortice security bolts (minimum throw 14mm).
M)	Double doors – 1st closing leaf	Two flush bolts (minimum throw 14mm) mounted on door edge and concealed when doors are closed.
N)	Double doors – 2nd closing leaf	A multi-point lock system with a minimum of three locking points with a central bolt (minimum throw 13mm) and two dead or hook bolts locking into the head and sill of the door frame (minimum throw 14mm). All locked simultaneously by one operation of the key. Or a multi-point lock certified to Sold Secure specification SS 306.
P)	Windows	A window lock with removable key.
Q)	Windows	A substantial locking handle with removable key.
S)	Windows	A multi-point locking system with removable key.
T)	Doors	A door-set certified to PAS 24.
U)	Windows	A window certified to PAS 24.
V)	Doors to outbuildings	A heavy duty padbar bolted to the door and frame and fitted with a padlock and fittings certified to EN 12320 Grade 3.

Accredited products can be specified by your local MLA member. You can find a local member by visiting: www.locksmiths.co.uk

MLA CODE OF PRACTICE.

OBJECTS

The Objects of the Association shall be as stated in the Memorandum and Articles of the Association.

The following is a summary of some of these objects:

- a) To watch over, protect, preserve, promote and represent persons, firms or bodies concerned or interested in the locksmithing industry.
- b) To watch over, protect, preserve and promote the heritage and history of the locksmith industry through the creation of a lock museum and archive.
- c) To advance education and training of persons preparing for entering or engaged in the trade.
- d) To agree standards of conduct, practice and materials.
- e) To maintain a high standard by members for the protection of the public at large.
- f) To enable the Association to attain a recognised status.
- g) To prescribe, regulate and conduct examinations and to charge fees, award qualifications.
- h) To carry on business as technical locksmiths, security consultants, specialist wholesalers, retailers and dealers in locksmithing tools, equipment and members' services.
- i) To apply for, purchase or otherwise acquire patents and licences.
- j) To produce, publish and distribute a journal.
- k) Co-operate with any body for the purpose of promoting the association.
- l) To purchase or lease property and/or rights for the purpose of the association.
- m) To do all such other things as are incidental to the attainment and furtherance of the said objects or any of them.

CODE OF ETHICS

To assist the achievement of the above Objectives, each member of the Association, by their acceptance and continued membership thereof, shall be deemed to have subscribed to the following:

- 1) To pursue their activities, conforming to professional standards and maintaining high ideals of personal honesty and integrity.
- 2) To abide by the policies and codes of practice of the Association, as established from time to time.
- 3) To analyse impartially and to the best of their ability, security problems receiving their attention and to advance the best possible solution for the protection of his clients.
- 4) To conduct themselves in a dignified manner and to refrain from using improper or unprofessional methods in furthering his business.
- 5) To co-operate in advancing the best interests of the locksmithing and keycutting industry, always ready to apply his special knowledge, skill and training for the use and improvement and betterment of his profession.
- 6) To encourage and promote loyalty in their profession by acting in a fair, reasonable and business-like manner in any dealings, especially those with any fellow member.

MLA Approved Companies' management and staff should provide products and services with skill and integrity. They should give all end-users the benefit of their experience in all aspects of security products and their applications.

ABOUT MLA APPROVED COMPANIES.

MLA APPROVED COMPANY SECTOR

The Master Locksmiths Association was first conceived in 1957 and was the idea of the Chubb Lock Company, and one or two London locksmiths. The prime mover was Mr Steve Fallshaw, then a locksmith in the Barbican, who became its first Chairman when it was formally founded early in 1958. The original 16 members decided the new 'association' should be known as The Greater London Master Locksmiths Association (GLMLA).

By the end of the first decade it had grown nationally with a wide distribution of members from all parts of the UK. At this time, it elected its first national President, namely Mr Steve Stephens of Oxford. The association by now included members from overseas and a healthy growth has been maintained, we now number almost 1500 members in all sectors. In the early '90s the association restructured to meet modern demands, retaining its title Master Locksmiths Association (MLA) it formed three main sectors: Personal Membership (for individual members wanting personal accreditation), Approved Company Membership (for trading locksmith companies meeting the high criteria stipulated by the association), and Affiliate Members (suppliers to the locksmith industry).

AIMS OF THE APPROVED COMPANY SECTOR

Companies and locksmiths trading in their own right, with retail premises or operating as a mobile locksmithing business, join the MLA Approved Company sector. It is this sector of the Association that trades directly with the public and private sectors in the High Street and through directories, and other advertising media.

The Approved Companies inspectorate means the MLA can demonstrate that all company members are meeting high standards. Each company is inspected on a regular basis, thus ensuring that its members and their operatives maintain standards in workmanship and administration. Also, members are expected to conform to legal requirements and that customer charters exist to service customer satisfaction.

Inspections have the effect of making locksmithing companies more accountable for their daily operations. Approved Company members are made aware that the MLA considers that training is also a valuable means to maintaining standards. Training is offered at the purpose built, state of the art training facility at the MLA's Head Office in Rugby.

Continued growth of the Approved Companies ensures that the MLA can offer a national network of locksmiths and the Association's head office in Rugby refers enquirers to their nearest approved company.

The logo depicted above is the one that is advertised by an approved company on their premises, vehicles and stationery, confirming to the public the standards expected of them.

Channels of arbitration exist to fully investigate any complaints or disputes, should they arise, and the MLA advises or takes any necessary action. The Board of Directors continually looks at consumer matters and advises members when appropriate.

The Approved Company sectors operates schemes whereby discounts may be available to policyholders of most well known insurance companies and they provide the service behind many major helplines.
