INTRODUCTION BY SIMON ARTHUR, MANAGING DIRECTOR, INSAFE INTERNATIONAL LTD.

It is with great pride that I present the 2024 Master Locksmith Association Handbook and Sold Secure Catalogue on behalf of Insafe.

At Insafe, we are deeply committed to advancing the security industry, and it is an honour to support this invaluable resource. Collaborating with the MLA has been integral to our shared mission, and we were proud to be a long-term exhibitor at the prestigious MLA EXPO.

Together, we acknowledge the rapidly changing security landscape and the importance of staying proactive in combatting crime. By working hand in hand, we can continue to innovate and deliver safes and locking solutions that meet and surpass the demanding standards of our industry.

This Handbook serves as a vital guide, showcasing the collective expertise and experience of locksmiths across the nation. It is a testament to the strength and unity of our community, and I am thrilled that Insafe is part of this collaborative endeavour.

Additionally, the products featured in the Sold Secure Catalogue reflect the highest levels of security and reliability, each undergoing rigorous design and testing to provide unparalleled protection.

The 2025 edition is rich with insights into cutting-edge advancements, emerging industry trends, and expert knowledge from experienced professionals. A well-informed locksmith community is key to upholding the standards of excellence that our industry represents.

As we step into a new year filled with challenges and opportunities, let us continue to work together as a united community. By learning from one another, embracing innovation, and maintaining our shared dedication to professionalism, we can shape the future of locksmithing and provide the peace of mind that people depend on most.

With the ongoing support of the Master Locksmith Association and the dedication of locksmiths nationwide, I am confident we will elevate our industry to even greater heights.

Simon Arthur
Managing Director, Insafe International Ltd

“

We believe that a well-informed locksmith community is crucial to maintaining the highest standards of security and professionalism

MLA OVERVIEW.

The Master Locksmiths Association (MLA) is the UK's largest trade association for locksmiths, established over 65 years ago as a non-profit body to promote and set standards of conduct, practice, and materials within locksmithing. With a membership of experienced professionals and a network of partners and affiliates, the MLA is one of the leading authorities in security matters, providing advice to UK property owners and renters on how to secure their homes and businesses.

APPROVED COMPANIES

MLA Approved Companies are locksmith businesses that meet the rigorous standards set by the Master Locksmiths Association (MLA). To be approved, these companies must be:

- **Vetted.** All our locksmiths must have a Standard Criminal Record Check which can only be attained by being a member.
- **Qualified.** Companies must employ at least one Qualified Master Locksmith (QML), who has passed our nationally recognised Certificate in General Locksmithing.
- **Inspected.** We regularly inspect our companies to ensure they deliver high-quality service by focusing on skilled and experienced staff, the right tools for every job, and excellent customer service and communication.

By choosing an MLA-approved company, you're assured of hiring trusted, professional locksmiths who adhere to strict standards, providing peace of mind and top-quality service.

Find your local MLA Approved Company in the directory or by visiting www.locksmiths.co.uk.

TRAINING LOCKSMITHS

In addition to promoting standards of conduct and practice, the MLA offers a range of training programs to locksmiths across the UK from its purpose-built training centre in Rugby, Warwickshire. Our **beginners' locksmith courses** are perfect anyone new to locksmithing to **advanced courses** for existing locksmiths who want to learn new skills.

Our brand-new Locksmith Qualification programme is aimed at those looking to begin a career as a locksmith and puts them on the journey to become a successful Qualified Master Locksmith.

The MLA are now proud to be an official Enhanced Learning Credits Administration Services (ELCAS) service provider, offering a locksmith qualification and membership to service personnel leaving the military.

For more information visit www.enhancedlearningcredits.com and search for learning providers our ELCAS provider number is 13463.

MLA EXPO

One of the MLA's most significant Industry events is the MLA EXPO, which is held every other year and is one of the world's largest locksmith exhibitions. The event brings together locksmiths, security professionals, and industry experts from around the world to showcase the latest products, technologies, and services in the locksmithing and security industry.

SUPPORTED BY

The MLA is recognised as the authoritative body for locksmithing by the police, home office, British Standards Institute (BSI), the Risk Insight, Strategy and Control Authority – RISCAuthority (formerly IPCRes, the UK property insurers' technical group) and Building Research Establishment (BRE). The MLA also has a subsidiary company, Sold Secure, which performs certification of security products via manual attack testing.

Overall, the MLA is committed to promoting and maintaining the highest standards of professionalism, ethics, and expertise within the locksmithing industry, ensuring that the public can trust and rely on the services of its members.

OVERVIEW FROM THE MANAGING DIRECTOR, DR STEFFAN GEORGE.

2024 turned out to be another busy year for the association.

Work continued at pace on the strategy development work, getting excellent feedback from members and non-members alike via a detailed online questionnaire and then having this backed up via a web-based set of workshops where the company used were able to ask questions of participants.

All this feedback is now being trawled through with a view to developing the strategic direction as well as whatever changes are required to deliver this, for the future of the association.

The focus of promotion, on top of the relationship with partners like the Neighbourhood Watch Network, and attending various industry related events, was more on digital marketing, looking in particular at social media advertising. It's certainly helped raise awareness with a very decent number of consumers having seen the ads. We have also created an awareness video that will be featured in our future promotions. This video can be personalised with the information of Approved Companies to help support our members' marketing efforts. Add to this the constant development work done on the MLA site, with the usual focus on SEO and ensuring pages continue to rank well despite the constant changes Google implement. Part of this SEO work is the further development of location pages – where all members within a given distance of a certain location are included (in a random order that changes each time it shows to ensure no favouritism) as well as showing further down those members who cover that area. These have proven very popular and are already ranking particularly well (e.g. top 1-3 places) in some very competitive locations!

Work on MLA EXPO25 continues at pace with loads more stands having already been snapped up, as well as more sponsorship opportunities. In addition to Dorix (Diamond Sponsors) and Locks4Vans (Garage Sponsors) we were delighted to see dormakaba not only tripling the size of their stand but also taking up the Gold Sponsorship package, as well as Codelocks who have taken up the Gala Dinner sponsorship option. We're extremely thankful to them all for their support, as well as all those who've already booked their space. We're in the best position this far out from a show we've ever been in, so we're looking forward to a great event.

Thanks to some great work by our training team we were delighted to gain ELCAS approval meaning we're now able

to offer training to those from the armed forces who are seeking resettlement training covered by ELCAS funds. This has already proven worth its while, and on the back of this the training team also came up with the Qualification Programme, which is a mixture of training courses and membership that is aimed at getting people through the Level 4 Ofqual regulated and nationally recognised MLA QML qualification.

Talking of training, the head office team started a 'Women in Locksmithing' campaign, aimed at recognising those women who are in the industry, whilst encouraging more to join. It's been great to see members get on board and celebrate the women they have working in their companies.

It's been great to visit regional meetings and catch up with members over the year. The importance of these events cannot be overstated, with locksmithing being such a solitary profession, with lots of locksmiths working alone for very long hours each day, the opportunity to meet up with other likeminded professionals, partake in training as well as the socialising, is a great opportunity. Talking of which, it's fantastic to see the chosen charity for the Expo Gala Dinner raffle is Andy's Man Club; a very worthwhile men's mental health charity.

It's been particularly pleasing to see the membership continue to grow, with more and more locksmiths seeing the benefit of being a member of the UK's largest and best known locksmith trade association. We will be working to continue providing more benefits over this coming year.

So to finish off, once again I owe a huge thank you and well done to the team here at Head Office for all their hard work and flexibility over the past 12 months, along with our board directors, all regional officers, tutors, testers, inspectors and of course all our members. I look forward to working with you all during the forthcoming year.

Dr Steffan George

MLA MEMBER BENEFITS.

So why join the MLA? What's in it for the locksmith? As well as the training and MLA Expo mentioned elsewhere in this handbook, there are a significant (and ever growing!) number of other benefits to MLA membership. These include:

YOUR OWN APPROVED COMPANY PAGE

Approved Company members have a dedicated, SEO-optimised page MLA approved company page on the MLA's website to greatly increase sales leads.

"I got Approved Company status in 2023 so my perspective is from a newly approved company. I noticed an immediate increase in enquiries and annual subscription paid for itself in less than two weeks."

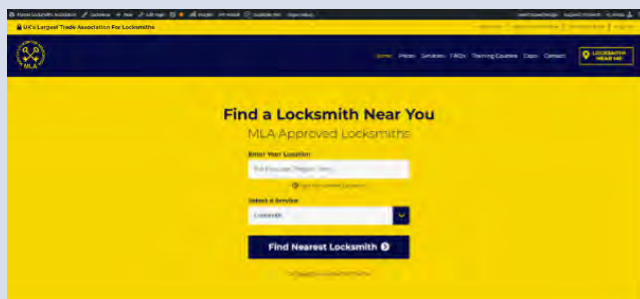

Gerard Brandreth, Regent Locksmiths

Read full interview above.

LISTING ON 'FIND A LOCKSMITH' PAGE

Your MLA approved company profile will be searchable when anyone searches for a locksmith on our website www.locksmiths.co.uk

MARKETING RESOURCES

We currently offer a range of FREE digital assets to support the digital marketing efforts of our Approved Company members. These include customisable social media templates and a personalised MLA Approved Company video.

We're eager to provide more tailored support, such as additional assets, training, strategy guidance, agency support, and other resources.

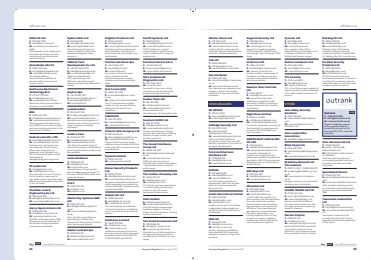

USING THE MLA LOGO

Approved companies may display the MLA logo on their website, marketing materials, van, clothing and wherever else you promote your business.

QML members may make use of the MLA logo on their business stationery and corporate clothing.

KEYWAYS MEMBER'S JOURNAL

Keeping you up to date with industry developments, new products, and news from the association all members receive the association's official magazine, *Keyways*.

REGIONAL MEETINGS

Attending regional meetings is a great way to meet new colleagues in the association, talk to experts, listen to seminars, visit small exhibitions and ensuring you maintain your continuous professional development.

MEMBERS FORUM + MEMBERS FACEBOOK GROUP

Share your expertise, seek advice, and stay informed about MLA activities through our forum and members-only Facebook group – both excellent networking opportunities with fellow locksmiths. We regularly post job vacancies, special offers, and other valuable opportunities.

You can access our online forum by logging in at www.locksmiths.co.uk. To join our members-only Facebook group, simply use your MLA membership number.

MEMBERS ONLY BENEFITS AND DISCOUNTS

Members enjoy discounts from leading suppliers and trade partners, exclusive insurance rates, and marketing support and advice. We also offer discounted business breakdown cover, help finding your next vehicle, and special deals on tools.

Our benefits and discounts are regularly updated, with new offers added frequently. Members can log into their member area for full details of all available discounts.

MLA LOCK ENCYCLOPAEDIA OF BS LOCKS AND MORE

Only available to MLA members our MLA encyclopaedia of BS Mortice locks and more is an invaluable tool to all locksmiths. Created by our members the encyclopaedia provides an ongoing resource and is available for just £225 + £11.75 P&P.

Please complete the booking form at the link above to order your copy today!

MLA UPVC LOCK CASE IDENTIFICATION MANUAL

Our MLA UPVC lock case identification manual is just £125 + £11.75 P&P and is only available to our members.

A great resource for anyone working on UPVC and composite doors a perfect companion for anyone working with multi-point locks.

Please complete the booking form at the link above to order your copy today!

TECHNICAL ASSISTANCE

The MLA's Technical Manager is on hand to help answer any questions you may have related to for example lock standards etc. By sitting on the various lock related working groups and British Standards Committees the technical manager has first-hand information as soon as items are discussed and provides regular feedback to members via articles in the association's journal or by presentations at regional meetings.

A significant amount of useful information (links to useful documents etc.) is available via the members section of the website.

The MLA has also purchased access to the AIS Safe List and are able to provide cash rating info to members who ask about specific safes.

ADVERTISING AND PROMOTION

As well as being advertised on the MLA's find a locksmith page and in this handbook, MLA approved company members can also advertise in corporate boxes in various directories.

TRAINING AND TRAINING DISCOUNTS

All members receive a discounted rate on MLA training courses.

Eligible members can access additional savings when booking multiple courses.

- Members who have been with us for 6 months or more can save five per cent off the discounted member price when they book and pay in full for three or more courses at once.
- Members who have been with us for six months or more can save 15% off the discounted member price when they book and pay in full for five or more courses at once.

To qualify for these discounts, members must have been with us for at least six months, book all courses at the same time, and pay for them in full.

Members will also receive a discount on several of the training sessions held at our MLA EXPO.

To explore our full range of training courses, use the code above.

ALREADY A MEMBER? VISIT YOUR MEMBERS AREA TODAY!

All members will be given access to the members area on locksmiths.co.uk. Log into your members area, using the password provided, for information on regional meetings, member benefits and discounts, access to webinars, order encyclopaedias and more.

Use the code on the right to login today!

MLA TRAINING.

The MLA offer a range of training courses starting from complete beginners all the way to advanced training for highly-skilled Master Locksmiths. Due to the nature of the content some of the courses may only be open to MLA members and require extra checks such as DBS's.

What We Offer

PURPOSE BUILT TRAINING CENTRE

The MLA are the UK's premier provider of locksmith training from their purpose-built headquarters, incorporating a state-of-the-art training centre consisting of a classroom environment for theory work and fully equipped workshop for hands on practical elements.

EXPERT TRAINERS

Our passionate specialist tutors keep up to date with the latest advances in the field and create and tailor courses to meet the requirements to the ever-changing Locksmithing Industry.

QUALITY DELIVERY

We ask students to provide feedback after every course to help ensure we are delivering the best training possible.

THEORETICAL AND PRACTICAL-BASED TRAINING

Classes include a mixture of theory and practical training, so you walk away not just knowing what you are doing but why you are doing it.

SMALL CLASS SIZES

Most classes are restricted to no more than 10 people, insuring you can get direct help from our tutors when you need it.

PROGRESSIVE LEVELS

Our courses have been developed to offer locksmiths the opportunity to build their skills from the very beginning all the way through to advance and specialist skill sets. Setting a path for consistent progression over ones locksmith career.

OUR COURSES

Beginners Course

Perfect for total beginners and those with basic training. This course is tailored for anyone wishing to begin a career in locksmithing or require a basic knowledge of locksmithing for their job. You will learn everything needed to begin your journey into locksmithing from how to cut keys to opening and fitting locks.

Our beginners' course is made up of four separate modules. Which you can choose to study at your own pace by either attending all five days at once (Five-Day Beginners Course) or selecting individual modules to take over time.

Two-Day Foundation Course (Mon/Tue)

The foundation course gives you the perfect introduction to mechanical locksmithing and is ideal for those with no experience and entirely new for locksmithing.

You'll leave the course understanding:

- Knowledge of the types of locks currently in use and terminology
- Cylinder key identification
- Understand pin tumbler mechanisms
- Learn how to set up a cylinder key machine including maintenance and safety
- Know who to cut a cylinder key and a mortice key by machine
- Stripping rim cylinder
- Mortice key blank identification
- Lever mechanisms
- Mortice locks
- Lever lock key cutting by hand
- Safes (brief overview)
- Understand lock Opening Basics (intro to picking, wafer lock and picking open disc tumbler lock)
- Code key cutting

Part of ASSA ABLOY

ABLOY

Lock Fitting (Wed)

Get hands on experience installing a selection of the most common locks and security devices. You'll leave the course with:

- Knowledge of the tools required for fitting
- Practise fitting a rim night latch
- Practise fitting lever mortice lock
- Practise upgrading a lever mortice to euro cylinder operated mortice
- Practise fitting secondary security devices

UPVC Module (Thu)

This module will help broaden your skills and give you experience of working with UPVC door locks.

You'll leave the course understanding:

- Multi-Point Lock ID (various locking types/mechanisms, back sets, strike plates, profiles and packing etc.)
- Toe and heeling
- Opening Jammed Mechanisms
- Gearbox Replacement
- Hinges and handles
- Security upgrades
- Additional security

Level 1 Opening (Fri)

Get hands on experience practicing the basic lock entry techniques on a selection of the most common locks.

You'll leave the course with:

- Familiarity with the tools for opening
- Methods of entry
- Opening authority procedure
- Theory of mortice lock picking
- Picking two and three lever mortice locks
- Other opening methods for two/three lever locks (jigglers, overlift)
- Lock Identification (how to)
- Theory of mortice lock drilling
- ERA 5 lever padlock opening
- Theory and then practical of picking pin tumbler locks

- Theory and then practical of drilling cylinder locks
- Pick Guns
- Other opening Techniques (bumping, snapping, slipping, letterbox tool)

For more information and to book please visit our website [locksmiths.co.uk](https://www.locksmiths.co.uk). Alternatively, this code will take you right there!

ADVANCED COURSES

Our Advanced courses are designed for those who have completed our beginner training or experienced members of the association who are looking to increase their skill set and expand their service offering.

Level 2 Opening

The perfect follow-on course from our Level 1 Opening, after some practical experience. You'll gain a deeper understanding of lock opening giving you the confidence to handle more complex jobs.

We recommend that this course is taken after some experience following any level 1 training. Entrants should have a good understanding of lever lock terminology, how locks work and understanding of basic opening techniques.

Learning outcomes:

- Understand the basic methods of entry
- Opening authority procedure
- Various methods of entry explained
- Detailed lock identification through the keyhole
- How to successfully drill BS curtailed mortice locks
- Including hints, tips and how to avoid the dangers of failure
- Hands-on drilling of BS mortice locks
- Instruction and hands-on NDE of Securefast, Eurospec and Chubb/Union 114

High Security Cylinder Lock Opening

This course is ideal for Locksmiths wishing to take their service to the next level tackling the ever-growing market of high-security cylinders, a standard fitting to new builds and new door installations by manufacturers.

Members can attend directly if they've been a member for 6 months or more. Non-members must have taken the foundation module first or be sponsored by two QML members or directors of MLA Approved Companies.

The following are all included and covered within the course:

Lock identification | Terminology of lock parts | Components and the make-up of cylinders | Drill protection | Snap protection | Side bars | Locking cams | Security handles | and more!

Advanced Curtain Lock Opening

This course is ideal for those who are looking to up their game in the art of non-destructive 5 lever curtain Lock Opening, something many fear and shy away from. This course is aimed to supply those with the confidence and knowledge in how to effectively pick these locks proficiently.

Learning outcomes:

- Learn mortice lock terminology
- Understand how mortice locks operate
- Lock Identification
- Select the right tool and wire
- Know how to use the correct tension
- Identify various lever types
- Identify anti-pick variations
- Know how to deal with anti-picks

Safes and Safe Servicing

Open to both members and non-members, safes and safe servicing is the perfect course for locksmiths wishing to add safe installation and servicing to their range of skills.

Created and delivered by renowned Safe Expert Jon Drake, this course offers a great introduction to safes and safes servicing, the different types of safe and their uses, the different types of locking devices and how to recover locked safes and miss set combinations.

Composite and uPVC Masterclass

This brand-new course which kicked off in 2023 is open to both members and non-members and is designed for locksmiths with strong uPVC knowledge looking to improve on their existing skills to take on more work.

With more Auto-fire composite doors being installed around the country, this course will give you something extra in your armoury to deal with these types of multipoint locking mechanisms.

New uPVC and composite training doors have been fitted in our training room to provide you with up-to-date real life scenarios and how to deal with them in the field.

Five-Day Advanced Course Week

You can now attend all of the above advanced courses (subject to experience) as one five-day week allowing you to maximize time, efficiency and most importantly, cost as a 15% discount is applied for members. Allowing you to quickly gain a number of advanced skills setting you up for success.

SPECIALIST COURSES

Our specialist courses focus on more niche areas of the Locksmithing trade and are fantastic ways to stand out from the crowd and get alternative work to your everyday lock outs and repairs.

Timber Fire Doors – Maintenance and Repair Course

Fire Door safety is an incredibly hot topic right now. Many Locksmiths are shying away from this area, but this is a field we recommend getting a high level of expertise in this 2025.

The course ran by the FDC is ideal for locksmiths who have experience and practical skills for maintaining timber-based doors and now wish to improve their knowledge of maintenance requirements for fire resisting doors.

This course is designed for refurbishment contractors, fabric engineers, maintenance teams, carpenters, and joiners. People that already have the practical skills but require more useful knowledge about compliance with the regulations and standards that apply to maintenance and repairs of timber-based fire doors.

continued overleaf

You'll leave the course with a good knowledge of fire door testing standards and how maintenance and repair work should be carried out to adhere to those standards. You'll be required to sit an exam at the end of the course with successful candidates receiving a certificate by awarding body FireQual, which is valid for five years.

Further training can then be undertaken with the FDC to become a qualified fire door inspector adding further to your specialist outputs.

Van Lock Fitting

This course is ideal for Locksmiths wishing to provide an additional service tackling the common occurrence of Van break-ins and theft. Using Locks 4 Vans products, known to help tackle the ever-growing issue with their wide array of products, this course will set you up to be able to successfully install vehicle locks.

This course will cover:

Deadlock recommended tool list | Slamlock recommended tool list | Additional equipment recommendations | The correct marking up and preparation before installation | In depth guide on the correct and safe installation of products | Hands on fitting to flat plates and simulation rigs then to a LIVE VEHICLE All aspects of fitting the deadlock and hook bolt case as well as slam lock (time permitting) and much more.

Aluminium and Glass Door

Open to both members and non-members this course is ideal for locksmiths who work on or are interested in working on retail/commercial units.

The course covers all you'll need to know about working with aluminium and glass doors. Covering everything from the different hardware requirements as well as the health and safety topics (e.g removal). This course is a mixture of theory and practical.

Learning outcomes:

- Understand how to safely remove, re-fit or replace the doors
- Learn how to gain access for repairing and rekeying the locks
- How to replace and troubleshoot issues with transom and floor springs
- Understand the implications of unchecked/ un-serviced doors
- Understand the implications of misuse of these doors and how to prevent injury

- Know the difference between hold-open and non-hold open doors on Access Control installations
- Be aware of the different types of specialist hardware (e.g. fire escape applications)
- Know how to adjust and calibrate aluminium doors
- Learn how to covert from double action to single action
- Learn how to fit electric releases, mag locks and correctly align doors when using shear mags

Auto Locksmithing

Open to both members and non-members this is a foundation course aimed at locksmiths that would like to add successful car opening to their range of services. Auto locksmith experience is not needed to undertake this course. You'll learn to use the popular Mr Li/Lishi lock picking and decoding tool which, once mastered, is transferrable to many other lock makes and types.

Split in two, the first part of training focuses on the widely used Volkswagen, Audi group (VAG) locks using the most popular key series in use, the HU66 (Silca ref) key. You'll gain an understanding of how these locks work, using a combination of presentation, and hands on with the locks and some theory work.

The second part of the training focuses on the popular Ford locks using the HU101 (silca ref) key. It is anticipated that the ford HU101 lock will provide a true test of your ability, but you will have the support of experienced trainers to help.

Electronic Security Fault Finding & Compliance

Open to both members and non-members this course is ideal for locksmiths looking to take on access control work, fault finding on access control and how to ensure that work is to current standards.

Attendees can expect to be able to have a newfound confidence in tackling access control systems. This course will ensure attendees have the required knowledge and understanding in how to deal with the faults in a professional and safe manner, improving their skill set and opening new markets to them.

Learning outcomes:

- Basic electrical principals
- Simple faults and how to find them
- Learning a methodical way to find faults
- Use of a multimeter
- Safe ways to work on mains electricity
- Basic knowledge of electrical laws
- Correct types of tools required
- How to install access control and comply with current standards

MLA EXPO25: SAVE THE DATE – OCTOBER 17-19, 2025.

Join us at the Telford International Centre for MLA EXPO25, the largest locksmith event, offering a chance to meet industry peers, discover cutting-edge products, and learn about emerging technologies.

With 50 brands already confirmed –setting a new record – this year's event will feature the latest in security solutions, mechanical locksmithing, key cutting machines, safes, and more. Don't miss out!

Scan the above code to explore the full 2025 exhibitor list.

Seminars & Training

Expand your skills with over 80 seminars and training sessions, from mechanical locksmithing to automotive topics. Some sessions will be free – details to follow.

Our Sponsors

Diamond Sponsor

We're thrilled to welcome back Dorix as our Diamond Sponsor for MLA EXPO25! After a highly successful debut as Gold Sponsors in 2023, Dorix continues to lead the way in access management with cutting-edge, bespoke solutions that offer unmatched security, convenience, and control across various industries, including hospitality, healthcare, education, and government.

Garage Sponsor

We're pleased to welcome Locks 4 Vans back as our official Garage Sponsor for MLA EXPO25. Their continued support is invaluable to the success of the event.

Gala Dinner & Saturday Night Party

Enjoy a fantastic Gala Dinner on October 18th, with delicious food, networking, and a charity raffle supporting Andys Man Club, a men's mental health charity. Afterward, join us for a Saturday Night Party with live music and drinks.

Gold Sponsor

We're excited to announce dormakaba as our official Gold Sponsor for MLA EXPO25! With a larger presence than ever before, dormakaba will be showcasing their innovative solutions in a new mobile showroom. Visit them at **Stand H1.30** –it's an experience you won't want to miss!

Gala Dinner Sponsor

A warm welcome to Codelocks as our official Gala Dinner Sponsor for MLA EXPO25! Get ready for a memorable evening—it's going to be an event to remember.

SPONSORSHIP OPPORTUNITY

There's still time to become a sponsor and gain exposure at Europe's largest locksmith exhibition. Contact us at admin@locksmiths.co.uk for more details.

Stay updated with MLA Expo on Facebook, Instagram, Twitter, and LinkedIn. We can't wait to see you in 2025!

3D GROUP

THE ULTIMATE DESTINATION FOR ALL YOUR AUTO LOCKSMITH NEEDS!

Discover 3D Group, your trusted partner for high-quality automotive locksmith products and services! We offer essential tools and parts from leading global brands with fast delivery. Plus, explore our training courses at the 3D Training Academy to enhance your skills!

3D TRAINING ACADEMY UNLOCK YOUR POTENTIAL

Boost your skills at the 3D Group Training Academy! Master automotive locksmithing and optimise your tools with practical courses from expert instructors.

Automotive locksmithing:
Practical training courses for all skill levels.

Expert instructors:
Learn from experienced instructors.

MLA supported:
Quality training in collaboration with the MLA.

Course options:
From lock picking to key programming.

Advanced training:
Enhance your skills with advanced courses.

MLA member discounts:
Special offers for MLA members.

Essential skills:
Practical knowledge to boost your career or business.

JOIN US TODAY

EXPLORE OUR EXCEPTIONAL AUTOMOTIVE LOCKSMITH PRODUCTS!

At 3D Group, we offer high-quality products and services designed to help you succeed, whether you are expanding your toolkit, replacing worn parts, or enhancing your capabilities. Our product range includes everything from key blanks and transponder chips to advanced machinery.

OUR OFFERINGS INCLUDE:

- Key blanks
- Transponder chips
- Remotes
- Key blades
- Remote parts & cases
- Key cloning & programming equipment
- Cutting-edge tools & machinery

And much more!

Stay competitive in this evolving industry with 3D Group, where excellent products and solutions support your success.

MEET OUR TUTORS AND STUDENTS.

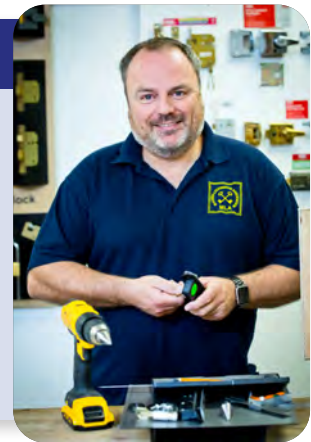

GRAHAM TWIST

My name is Graham Twist, and I am one of the many dedicated skilled trained master locksmiths that help to deliver the Master Locksmiths Association's training modules. I have been a member of the MLA since the early eighties and have run my own business in Kent for over 45 years. Whilst we all help to deliver the many different training courses run by the MLA my main focus, is the Foundation Locksmithing Modules run over two days. Past students have commented that without this foundation knowledge they gained over the first two days they wouldn't have been able to progress to the next level on their locksmith learning journey. The MLA is really the one truly unbiased locksmith training organisation run by locksmiths for locksmiths in the UK today.

SHANE HALES

I've had a passion for locks my entire life. I have no idea why, I just have. When I left school I either wanted to be a locksmith or a carpenter and joiner. I could not get an apprenticeship in locksmithing so went the joinery route. I added locksmithing to my successful building company in around 2010. I did some awful training in 2011 where I seemed to know more than the lecturer! I hate the fact there is no official route for locksmiths. That's why I chose to work with the MLA to lecture. There is NO better route in this industry, MLA training and working alongside the best in the industry is the best way forward. I've been very lucky to work with and learn from the best there is. I have a mechanical/engineering mind and well known for taking everything to bits to understand it inside and out. You only get out, what you put in. Its hard work but very rewarding.

JORDAN MORRISON

My name is Jordan Morrison I am 28 years old, and I am a Qualified Master Locksmith. Starting out I was employed full time; making the transition from this to owning and operating my own business was the biggest challenge I have encountered. Training through the MLA was vital in my journey as a locksmith and director of my own business and without the MLA I can safely say I would not be where I am today. I sought to gain the knowledge and skills I needed to become an experienced locksmith. The MLA were able to provide this through the wealth of knowledge and experience of their instructors and courses they have to offer.

5-PIN & 10-PIN CYLINDERS

OUR V5 & V10 RANGE OF CYLINDERS ARE AVAILABLE IN A WIDE RANGE OF SIZES, STYLES AND FUNCTIONS, AND ARE SUITABLE FOR BOTH DOMESTIC AND COMMERCIAL USE.

V5 5-PIN ARCHITECTURAL CYLINDERS

- Ability to key to customers specific requirements with keying options KTD, KA and UMK.
- Euro profile, oval profile & rim cylinders also classroom cylinders available.
- Entry level security.

AVAILABLE IN: EURO SINGLE, EURO DOUBLE, EURO DOUBLE OFF-SET, EURO CYLINDER & TURN, EURO CYLINDER & TURN OFFSET, RIM CYLINDERS, UK OVAL AND SCANDINAVIAN OVAL.

V10 10-PIN RESTRICTED CYLINDERS

- Restricted keyway for applications that require higher key security.
- Ability to key to customers specific requirements with keying options KTD, KA and UMK.
- Euro profile, oval profile & rim cylinders also classroom cylinders available with added construction key facility available within this range.

AVAILABLE FINISHES: SATIN BRONZE, POWDER COATED BLACK, SATIN CHROME, SATIN BRASS, ANTIQUE BRASS, POLISHED CHROME & POLISHED BRASS.

Looking to attract new locksmith staff?

Our Locksmith Qualification Programme could be the solution.

Our programme offers essential training, support, and a nationally recognised qualification, providing an excellent opportunity to develop locksmith professionals.

Here's how it can benefit your business:

- ✓ **Enhance Skills**
Offering a training programme attracts individuals interested in a locksmithing career, ensuring a highly skilled and committed team member delivering quality work
- ✓ **Career Progression**
With a structured qualification pathway, the programme offers employees a clear route for career development, helping you attract motivated individuals seeking long-term opportunities
- ✓ **Strengthen your business credibility**
Once qualified, your new team member will become a Qualified Master Locksmith (QML), enhancing your workforce and reinforcing your Approved Company status
- ✓ **Improve Retention**
Investing in ongoing education and qualifications ensures your staff feel valued, fostering loyalty and reducing turnover

Nurture a future QML for your business

Want to know more?

Email Natalie on training@locksmiths.co.uk or call 01327 262255

Scan for information

With our Locksmith Qualification Programme, you not only attract new talent but also invest in the future of your business. Sign up today and build a stronger, more skilled workforce.

Locksmith Qualification Programme

This programme will provide you with the essential skills and support to develop a successful career as a locksmith.

Plus
FREE
revision
exam notes

Included in the programme:

- ✓ **5 Day Beginners Course**
Consists of four modules which can be taken separately
- ✓ **Level 2 Opening**
Master British Standard 5 Lever mortice locks ahead of the opening module of the MLA qualification
- ✓ **Qualification Preparation Day**
This is a practical, hands-on learning experience that will equip you with all the essential skills needed to undertake the practical modules of the MLA qualification
- ✓ **MLA Qualification**
Take your qualification modules to obtain a Level 4 Certificate in General Locksmithing
- ✓ **2 Years MLA Personal Membership***
Giving you access to a wide range of help and resources

THE MLA QUALIFICATION

AN OFFICIAL OFQUAL LEVEL 4 CERTIFICATE IN GENERAL LOCKSMITHING.

The MLA Qualification (formally known as the BLI exam) is arguably the best recognised exam-based proof of competence in the industry. It is for this reason that it is one of the criteria for achieving the MLA Approved Company Status.

The MLA qualification is a Level 4 certificate: Level 4 currently being the highest level you can achieve in a locksmith qualification; due to the high level of skill and knowledge you need to demonstrate to pass.

The qualification is a demonstration of actual competence rather than the number of hours training you undertake, meaning you are judged entirely on your level of knowledge and skill. This means if you're already a working locksmith with several years' experience you can sit the modules without having to take any additional training. However, if you or a staff member are a complete beginner we'd recommend you start by taking our five-day Beginners course and then add subsequent modules along with time put in practising.

The content of the Qualification itself remains the same: Four modules which can be split over one or two days. This consists of practical assessments covering fitting, opening and key cutting; and a written paper consisting of 50 questions on general locksmithing. If you need support, you can choose our 'with coaching' option.

As we haven't changed the assessment, anyone who sat and passed from September 2019 to July 2022 will be able to upgrade their qualification certificate to the ABBE and Ofqual recognised version subject to certain criteria. You will be required to pay a small fee (please call **01327 262 255** or email training@locksmiths.co.uk for details).

Passing the exam is a fantastic way to demonstrate your skills and knowledge as a locksmith, and now you'll have a nationally recognised qualification as well!

You must take the assessments and pass to become a Qualified Master Locksmith (QML) and have at least one QML member per five locksmith staff to become an Approved Company.

WAYS TO TAKE THE QUALIFICATION

One day – no coaching, all four modules

The first is to blitz it all in one day; come to the MLA's workshop facility and do all four modules in a single day. This option provides a way for those who want to minimise the amount of time spent away from work but is quite an intensive day to say the least.

Individual modules

Sit the qualification at your own pace by taking the individual modules separately, in the order you wish and at the speed you feel comfortable with giving you the option to focus on each aspect independently.

Two day – with coaching

The final option is to take the Qualification with coaching which, continues to prove its worth with excellent feedback from those who've taken the exam via this route.

Introduced to give candidates some refresher coaching prior to each module, this is a good option if you're unsure of exactly what the invigilator is looking for in a successful pass.

Prior to each module you'll receive some refresher instructions/demonstrations and a lecture appertaining to the module in question with some hands-on practice if applicable. A full demonstration of the key making is given, and good and bad examples of the lock opening and lock fitting are shown.

Two modules are completed each day, and lunch is provided. Candidates can choose to only take certain elements rather than all four if they so wish. It is also possible to re-sit modules that may have been failed with this two-day option, whereas with the one-day, due to time constraints, this is not possible.

Having continued to run quite many these events, we are delighted to confirm that they continue to work very well, with a large take up, feedback from those doing it being particularly positive and pass rates continuing to be high (without lowering the criteria!).

Those who have taken this route have felt that settling them down at the start and alleviating their nerves and knowing what we were looking for as a finished result were major factors in their success.

Qualification Preparation Day

For those unsure if they are ready to undertake the Qualification Modules, you now have the option to attend our Qualification Preparation Day. A hands on 'Mock' experience of doing your modules.

You'll learn exactly what is required from you to pass, allowing you to confidently understand and practise the areas you are weakest at ready for your actual assessments.

This is ideal for anyone who believes they're ready but lack confidence, to those who want to have a larger understanding of the Exams, so they have the best shot of passing first try.

For details on how to take the MLA Exam simply contact head office on 01327 262 255 or email training@locksmiths.co.uk

Alternatively, use the code on the right for more information and to book!

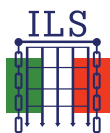

“

I've got to say that the weekend was run very professionally with excellent guidance throughout and nerve steadying advice too.

ULTIMATE PROTECTION

Within the Security Industry & Domestic Market

SECURITY RELATED STANDARDS OVERVIEW.

At any given time there are approximately 30,000 standards within the UK and many more European standards being used covering a wide range of products and services.

Standards are under constant review to make sure they are relevant and do not contradict each other. Standards provide the test criteria for independent test houses (such as Sold Secure) to accredit products and confirm they have been manufactured to a minimum requirement. The following overview is a breakdown of locksmith related standards (not exclusively) that people working within the industry should at least be aware of and ideally know what standards apply and when.

STANDARD IDENTIFICATION NUMBER

BS 3621:2017+A1:2024

Title: Lock Assemblies Operated by Key from Both Inside and Outside of the Door

The original lock standard first drafted in the 1960's and still the base for all of the lock standards that are cross referenced in it. 3621 was intended for five lever mortice locks fitted to wooden doors and is intended to be used on domestic properties. The key-key application of this locking device makes it unsuitable for properties with single exits. The latest version was amended to satisfy legal issues within the wording of the document. The UK was able to retain the following BS standards because of the GVA that was not included in BS EN 12209 and BS EN 1303 however BS 3621 was brought into line with 12209 and 1303 in 2004. New tools were introduced in 2024 to the general vulnerability assessment.

BS 8621:2017+A1:2024

Title: Lock assemblies operated by key from the outside of the door and by handle or thumb turn from the inside of the door

Introduced in 2004, 8621 has the same test criteria as 3621 but is intended for use on locking devices that require no key to achieve egress. Single exit and multiple occupancy dwellings require keyless egress as per fire regulations. The 2024 amendments were as per 3621.

BS 10621:2017+A1:2024

Title: Lock assemblies in which the operating mode can be switched between the normal BS 3621 operating mode and a secure mode in which no egress is possible

Introduced in 2007, 10621 also has the same test criteria as 3621 and is a hybrid of the two previous standards. 10621 locks should not be used in single exit dwellings because of the entrapment possibilities. Amendments made in 3621 and 8621 in 2012 are mirrored here.

BS EN 12209:2016 (latest version out for public comment)

Title: Building Hardware – Locks and Latches – Mechanically Operated Locks, Latches and Locking Plates-Requirements and Test Methods

This European standard covers requirements and test methods for all types of mechanical lock or latch (including associated or separately supplied locking plates), intended for use on pedestrian doors in buildings but excludes electro-mechanically operated locks and striking plates,

multi-point locks and their locking plates, locks for windows, padlocks, locks for safes, furniture locks and prison locks. This standard is in harmony with the *621 series of standards apart from the GVA that is unique to the UK.

BS EN 1303:2015

Title: Cylinders for Locks – Requirements and Test Methods

This European standard introduced in 2005 is for cylinders only. The test methods are in line with the *621 series of standards except for the GVA.

PAS 24:2022+A1:2024

Title: Enhanced Security Performance Requirements for Doorsets and Windows in the UK

Adapted with input from Secure by Design, PAS 24 is intended to provide the minimum requirements for whole door sets in new build dwellings. PAS 24 takes into consideration all aspects of a door including fixings and hinges etc. The lock requirements cross reference to 3621, 8621 etc. PAS 24 was rewritten to include BS 7950 in 2012.

PAS 3621:2011

Title: Multipoint locking assemblies – Keyed egress

A family of standards that mirrors BS 3621 but for multipoint locks.

PAS 8621:2011

Title: Multipoint locking assemblies – Keyless egress

PAS 10621:2011

Title: Multipoint locking assemblies – Dual mode egress

BS EN 1125:2008 (under review)

Title: Building Hardware. Panic Exit Devices Operated by a Horizontal Bar, for use on Escape Routes. Requirements and Test Methods

Experience relating to escape from buildings and general safety have made it desirable that doors at exits in public buildings, places of entertainment, shops etc., should be fitted with panic devices operated by a horizontal bar. The emphasis for products covered by this standard is on safe exit rather than security.

BS EN 179:2008 (under review)

Title: Building Hardware – Emergency Exit Devices Operated by a Lever Handle or Push Pad, for use on Escape Routes. Requirements and Test Methods

This standard covers devices to be used in emergency situations where people are familiar with the emergency exit and its hardware and therefore a panic situation is most unlikely to develop. Lever handle operated escape mortice locks or push pads may therefore be used.

BS 8607:2014+A1:2016

Title: Mechanically operated push button locksets

Published in 2014 following information from Secured by Design that push button locksets were being used on some new build apartments. There are five levels of security that can be tested to and the highest levels (four or five) is intended to confirm that a push button lockset is at least as secure as a BS 3621 lock.

BS EN 12320:2021

Title: Building Hardware, Padlocks and Padlock Fittings

This European standard specifies performance requirements and describes test methods for strength, security, functions and corrosion of padlocks and padlock fittings used in building applications, but excluding cables and chains.

Requirements which relate to security are classified in six grades, based on performance tests that simulate attack. This standard now contains an attack test with a limited tool list based on 3, 5 and 10 minutes.

BS EN 14450: 2017+A1 :2023

Title: Secure storage units. Requirements, classification and methods of test for resistance to burglary. Secure safe cabinets

This European standard specifies performance requirements and describes test methods for strength and security functions of secure safe cabinets to S1 and S2.

BS EN 14846:2008 (under review)

Title: Building Hardware – Locks and Latches – Electromechanically Operated Locks and Striking Plates

BS EN 1627 – 1630: 2021

Pedestrian Doorsets, Windows, Curtain Walling, Grilles and Shutters. Burglar Resistance

SOLD SECURE

Sold Secure is an independent test house that has its own test specifications based on the standards listed (sometimes using several standards in one specification). Sold Secure has 40-plus specifications that are constantly reviewed by industry stakeholders and is recognised by Police groups (ACPO), Insurers and other test houses. Some of the locksmith related specifications include:

- **SS 301:2024 – Specification for Mechanical Security Systems for Domestic Buildings**
- **SS 303:2020 – Specification for High Security Padlocks**
- **SS 304:2008 – Specification for Domestic Safes**
- **SS 306:2008 – Specification for Mechanical, Domestic Door and Window Security Systems**

- **SS 308:2008 – Specification for Mechanical, Commercial Doors and Window Security Systems**
- **SS 312:2024 – Specification for Cylinders for Locks**

A revised Diamond level that tests cylinders against snapping. Secure by Design recommend SS 312 Diamond cylinders. SS 312 is a stand alone cylinder test that improves security just by changing the cylinder.

- **SS 314:2009 – Specification for Security Cabinets**
- **SS 315:2022 – Specification for Externally Mounted Key Safes**
- **SS 323:2020 – Specification for External Perimeter Fencing and Gates**
- **SS 504:2024 – Specification for Smart Locks in use within Domestic and similar Buildings**

DHF TECHNICAL SPECIFICATIONS

TS 003:2012

Title: Door Chains and Limiters

Published in 2012 this specification gives a simple pass/fail test for loads on door chains and restrictors. It replaces a very complicated test specification that was very costly to achieve and therefore manufacturers chose not to use it. The rewrite happened in late 2012 and product should begin to be tested to it in the near future.

TS 007-1:2019

Title: Enhanced Security Performance Requirements for Replacement Cylinders and or Associated Security Furniture

A DHF technical specification that tests for security of cylinders or a combination of security handles and cylinders together. A star rated system that needs three stars for the minimum requirement can be achieved with either a three star rated cylinder or a one star rated cylinder and two star rated handle.

DHF TS 007-2:2019

Title: Enhanced Security Performance Requirements Part 2 – for mechatronic cylinders and/or associated hardware

TS 008:2022

Title: Enhanced Security and General Requirements For Letter Plate Assemblies and Slide Through Boxes

A totally new test. This specification provides a means of evaluation against opportunistic attack and employs human intervention testing.

TS 009:2019

Title: Enhanced Security and General Requirements For Letter Box Assemblies That Are Free Standing or Surface Mounted and Where Mail Is Retrieved From the Same Side As Delivery

This is also a new test specification that provides a means of evaluation against opportunistic attack to try and prevent the contents/letter box being removed and assess the product against potential arson attack.

continued overleaf

TS 010:2016 + A1:2019

Title: Electromagnetic Locking Devices Performance Requirements and Test Methods

For security, durability, fire and environment for electromagnetic locking devices.

TS 621:2018 (under review)

Title: Thief Resistant Electromechanically Operated Lock Assemblies

A technical specification that describes performance requirements for single or multipoint thief resistant electromechanical lock assemblies including the lock interface, striking plate, fixing screws, fitting instructions and where appropriate, cylinders and protective furniture.

MLA 2024 PR REVIEW.

This is just a brief snapshot of some PR highlights generated throughout the year

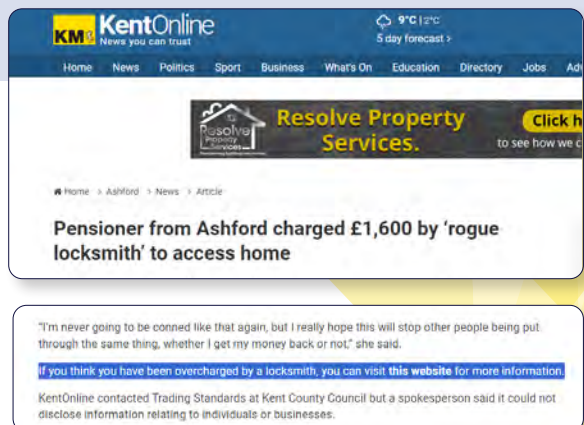

BBC THIS MORNING – APRIL 2024

The Master Locksmiths Association took part in a BBC episode of This Morning in April 2024 regarding Rogue Locksmiths, we provided advice on how to prevent being overcharged.

KENT ONLINE – APRIL 2024

The Master Locksmiths Association featured on Kent Online's website advising to visit the MLA website if a user has been overcharged by a locksmith.

WHICH? TRADER ARTICLE – APRIL 2024

The Master Locksmiths Association was referenced as the UK's largest locksmith association in a Which? Trusted Trader online article regarding locksmith scams.

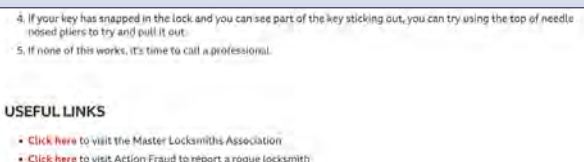

WHICH? - PRINT 2024

In a Which print article in May 2024 about being scammed by a locksmith, the Master Locksmiths Association was referenced as an association for locksmiths and to use the MLA website for an approved locksmith.

BBC WEBSITE – APRIL 2024

Coinciding with the MLA's appearance on the BBC This Morning, the BBC ran an article about about locksmith scams and preventing being scammed by a locksmith, the Master Association Website was included as a useful link as part of the article.

MLA PROMOTION.

For over 60 years, the Master Locksmiths Association (MLA) has helped people in the UK feel safer in their homes.

By promoting locksmiths who are thoroughly vetted, inspected, and qualified, and who uphold the motto of 'Skill and Integrity', the MLA has earned recognition from key authorities, including the Police, Secured By Design, insurers, Neighbourhood Watch, government websites, training organisations and more.

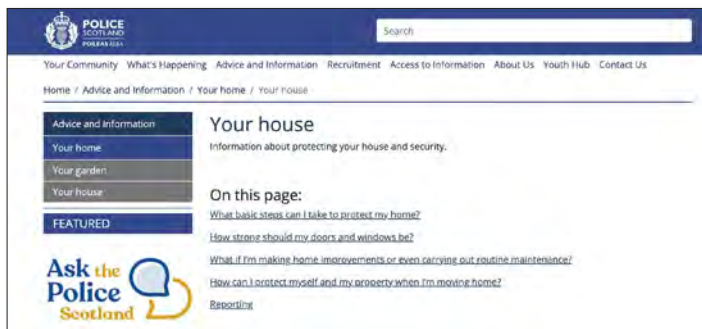

In recent years, the MLA has received strong recommendations from these authorities, further enhancing our credibility and expertise.

Guidance from these authorities on choosing a locksmith can be summarised as follows: if you need a locksmith that is well trained, trustworthy and capable to do the job, then Master Locksmith Association will be the place to go to.

MLA POINTED TOWARDS BY POLICE

What do the Police and the MLA have in common? Both are committed to providing people across the UK with a sense of safety and security. As a result, our association is highly recommended on authorities' websites in articles focused on crime and theft reduction:

POLICE SCOTLAND

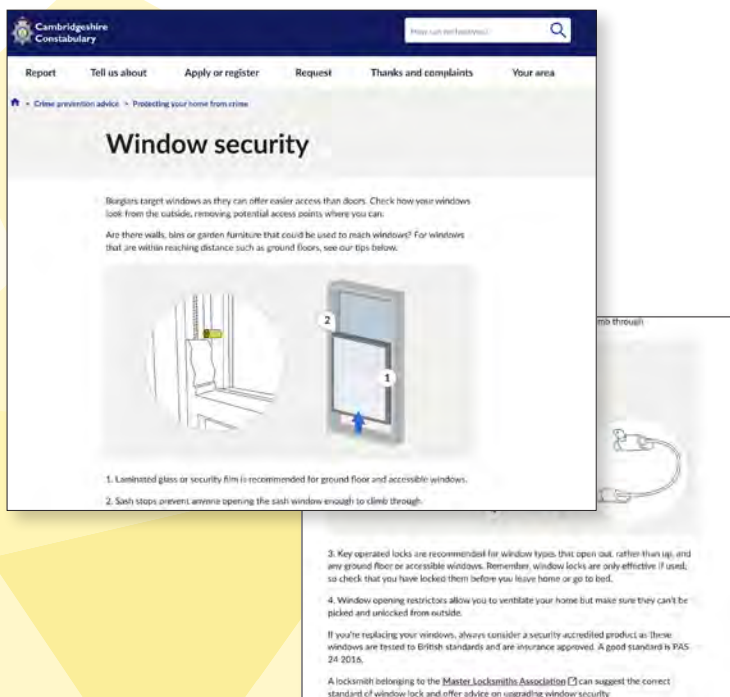

Some other tips include:

- Doors should be fitted with a 5 lever mortice deadlock to BS 3021 standard or a Euro Profile Cylinder lock to TS007 3 star standard
- Door frames should be strong enough to support the door, hinges and lock.
- If the door is not a 'multi - point locking' door, fit mortice bolts at the top and bottom of the door and hinge-bolts give additional resistance
- External timber doors should be solid core and a minimum of 45 mm thick.
- UPVC doors should be to PAS024:2016 standard as below
- New / replacement doors should be manufactured and installed to meet standards PAS 024:2016 or equivalent
- Glazed panels within or adjacent to the door should have laminated glass in at least the inner pane to standards P1A
- Letterboxes should have an internal cover plate and not be at floor level. This means that mail drops down and can't be taken from outside
- If you are replacing your letter plate, look to replace it with a letter-plate to TS908 standard
- Fit a door viewer and a door chain
- Don't leave keys in the door. They could be turned or stolen through the letter-plate if a standard letter plate is fitted
- Think about having your door reinforced with a security door bar
- Ask the manufacturer/supplier before fitting any extra locks to double glazed windows or doors
- Windows should have internal leading to avoid the glass being removed from the outside. Some systems, which have external leading are secure because the glass is adhered to the frame or secured by special tamper-proof clips. This can be checked by consulting the manufacturer
- New / replacement windows should be manufactured and installed to PAS024:2016 or equivalent. This indicates set specific standards of design and security for windows.

Secured By Design or the Master Locksmiths Association more information about security standards.

CAMBRIDGESHIRE POLICE

MET POLICE

Menu

Garages, outbuildings and sheds

Doors, windows and locks

A large proportion of newly built properties have been awarded 'Secured by Design (SBD)' certification, which means that they have had attack tested doors and windows installed under the SBD Scheme.

Some existing properties have had their doors and/or windows replaced with attack tested products that meet BS PAS 24:2016 or the equivalent, which includes the door and/or window, frame, locks, fittings and glazing. If there is documentation to confirm that this is the case, the measures detailed in this section will not be required.

Alternatively there may be documentation to prove that an existing building has had the doors and/or windows replaced to the above standard.

For further information: www.securedbydesign.com

Further advice around secure locks for doors and windows can be found on the [Master Locksmiths Association \(MLA\) website](#).

Use a licenced and approved locksmith to keep your home secure. **The Master Locksmiths Association** lists all vetted, inspected and qualified locksmiths in your area.

Master Locksmiths Association Handbook 2025

MLA GUIDELINES FOR MINIMUM SECURITY FOR DOMESTIC PROPERTY.

ACKNOWLEDGEMENTS

The Master Locksmiths Association is grateful to the following organisations for their support and assistance in drawing up these guidelines:

- National Police Chiefs Council (NCPD)
- British Hardware Federation
- Builders' Merchants Federation (BMF)
- Chief Fire Officers Association (CFOA)
- Door and Hardware Federation (incorporating Door and Shutter Manufacturer's Association and Association of Building Hardware Manufacturers)
- Glass and Glazing Federation (GGF)
- Guild of Architectural Ironmongers (GAI)
- Home Office Scientific Development Branch (HOSDB)
- RISC Authority (UK insurers technical advice body)
- Lloyds
- Sold Secure (part of MLA Group)
- Secure by Design

Note: These guidelines give a general description of security for domestic buildings. Neither the guidelines nor the list guarantees that these methods are suitable for specific applications. It is the responsibility of the equipment supplier and/or equipment purchaser to ensure that any system is suitable for its particular application and that it complies with all legislation, standards, codes of practice or any other requirement.

Every effort has been made to ensure the contents of these Guidelines are accurate, however, the Master Locksmiths Association does not accept any responsibility for loss arising from decisions based upon them.

1. INTRODUCTION

Theft from domestic property causes major problems for the Insurance industry and for specifiers of security products who might not be familiar with the industries involved. The reasons for these guidelines are:

- The Insurers possible requirement on a policy holder to maintain a minimum level of security to protect their premises, to use it when the premises are unattended or in part when they are occupied.
- The general obligation of householders to take reasonable security precautions for their own good.
- To provide easily understood information for the use of those not familiar with the Security or Insurance industries.

These guidelines are not intended to be applied to new construction or major refurbishment. For these applications PAS 24:2022+A1:2024 Enhanced security performance requirements for doorsets and windows in the UK (this version of PAS 24 includes the requirements of BS 7950) apply. These specifications are based on complete doorsets and window assemblies i.e. the door or window, including frame, hinges, locks, and fixings as a whole unit. The specifier is recommended to obtain doors and windows certified to these specifications.

Further guidance is given in BS 8220-1: Guide for security of buildings against crime – Part 1:2000 – Dwellings.

Currently European specifications EN 1627-1630 also exist for the security of doors, windows and shutters. Products certified to the appropriate grades of these specifications are equally suitable.

These guidelines assume that occupants are all able bodied. For users with disabilities, seek professional guidance before any installation.

Every attempt is made in these guidelines to be as practical as possible with recommendation or the specification of products, but there will always be occasions where alternatives will need to be sought because of the nature of a particular design, size or other feature of a door or window to be secured. In these circumstances the advice of a specialist in this field should be taken. A member of the Trade Division of The Master Locksmiths Association (denoted as “MLA approved company” and accompanied by the MLA registration number) should be contacted for such advice which should then be checked with the Insurers where applicable.

To comply with the requirements of most Insurers for thief resistant lock assemblies that necessitate the use of a key for egress, it is generally accepted that locks used on traditional external timber doors are certified to **BS 3621:2017+A1:2024 lock assemblies operated by key from both inside and outside of the door**. This indicates that the lock is part of an on-going test and audit programme to show it meets the requirements.

The MLA recommends that locks conforming to the latest version of any standard are to be used, however the MLA also recognises that insurers will on occasion accept locks, already installed that conform to earlier versions.

Where there is a requirement for means of escape (from fire) from the inside without the use of a key while maintaining security from the outside, lock assemblies to **BS 8621:2017+A1:2024 Lock assemblies operated by key from the outside of the door and by handle or thumb turn from the inside of the door** should be installed.

Certifying to BS 8621 commenced in April 2005 and lock assemblies certified as complying with this Standard are listed within the links in Appendix C.

The introduction of new materials (e.g. aluminium, PVC-U and composite materials) and designs used in the construction of doors and windows can make single point locking inadequate. The locks designed for these types of doors are usually multi-point and therefore cannot be tested to **BS 3621, BS 8621 or BS 10621**. **PAS 3621, PAS 8621 and PAS 10621** were published in 2011 and will provide minimum requirements for multi-point locks to be tested to. Locks produced prior to this date should have a minimum of three locking points and use a cylinder that meets the minimum requirement stated in 3(b).

Nothing in this document or related documents shall imply that the installation of any security device will prevent unauthorised entry to a premise or that by following these guidelines insurers are obliged to issue insurance cover.

2. GENERAL CONSIDERATIONS

When considering the matter of minimum security requirements and the interpretation of these guidelines, users of these guidelines should be mindful of a number of factors:

- (a) The adequacy of the door or window, frame thickness and the material quality together with the fixings of the frames to the surrounding structure might impact on the level of security provided.
- (b) A degree of flexibility when imposing security requirements might, on occasions be necessary. Often, due to the nature of the door or window construction, or the material from which it is constructed, it might require the use of locks or locking devices in situations other than that for which they were intended. In such circumstances the advice of a trade member of the Master Locksmiths Association should be sought, and written confirmation of their proposals obtained from any interested insurer.
- (c) If improvements are required to the security of aluminium, PVC-U or composite material doors or windows it is stressed that this work should be undertaken by professionals. Again, advice must be sought from an Approved Company Member of the Master Locksmiths Association who has experience in this type of work. Care should be taken not to breach manufacturers' warranties that might still apply.
- (d) It must also be appreciated that some locks not certified to BS 3621 have in the past and could in the future be accepted by Insurers. Where this is the case, written confirmation by the Insurers of their acceptance of the product for its intended use should be obtained by the end-user. This recommendation also applies with the introduction of lock assemblies under BS 8621 and BS 10621.
- (e) Insurers and specifiers should be mindful of possible conflict between occupier safety and security when the property is occupied. Careful consideration must be given to the means of escape in the event of fire before specifying that locks should be engaged and the keys removed (using BS 3621:2017+A1:2024 specification) before retiring for the night. Keys should be kept within easy reach of the occupant, but out of reach of an intruder.

If in doubt, consult any interested insurer and the local fire prevention officer for guidance.

- (f) External doors that are deemed to be used as an exit in case of an emergency should be locked in the manner specified for the final exit door, with the addition of a lock that can be opened from the inside without the use of a key for use when the property is occupied. Where locks to BS 8621:2017+A1:2024 are fitted, egress will be facilitated from the inside by the presence of the thumb turn.

continued overleaf

- (g) In blocks of flats and other buildings of multiple occupancy, the means of escape in the event of fire is an important consideration, particularly where the entrance door to the individual flat is the only means of escape. The use of escape locks that can be opened from the inside by a single action without the use of a key (but still retain their security from outside as described in BS 8621) is acceptable to Insurers subject to written confirmation. This type of lock will normally meet the requirements of the Building Regulations.
- (h) New products may become available that conform to test procedures for security products, and carry the appropriate certification mark. When these are accepted by the organisations supporting these guidelines, and where suitable for the protection of a particular risk, their use should be encouraged.
- (i) When making recommendations for the fitting of security items, consideration must be given to the type of risk involved relevant to the location of the premises. It will be necessary to increase the number of locks and fittings to doors and windows in high-risk areas. Advice should be sought from the local Crime Prevention Design Adviser, Architectural Liaison Officer, any interested insurer involved or an Approved Company Member of the Master Locksmiths Association.
- (j) A list of Approved Company Members of the Master Locksmiths Association, recognisable by the logo 'MLA Approved Company' is available from the Master Locksmiths Association. This list is also reproduced and updated on our website www.locksmiths.co.uk.

3. MINIMUM SECURITY REQUIREMENTS

- (a) Locks currently available certified to British Standard BS 3621, BS 8621 or BS 10621 should bear the standard number and the mark of the certification agency. These are listed in the web links in Appendix C. Such locks may be available in rim or mortice fixing. Locks for PVC-U and composite doors (when multi-point) should meet the minimum requirement set out in PAS 3621, PAS 8621 and PAS 10621 published in 2011. Locks produced prior to this date should have at least three locking points and be combined with a cylinder that meets the requirements of 3(b). Locks that have been part of a PAS 24 door test are also acceptable. Written agreement for the acceptance of such locks should be obtained from the insurer by the policyholder.
- (b) Lock cylinders installed before the implementation of these guidelines (November 1999) should have a minimum of five pins and an anti-drill insert. Thereafter, as a minimum requirement the cylinder shall meet the requirements of **BS EN 1303:2015**. Clause 6.8 Key related security Grade 5 (Table 9) and Clause 6.9 Attack resistance Grade 2 (Table 10). BS EN 1303:2015 was published in July 2015 and tested cylinders will begin to be marked with this date. Technical specifications SS 312 and TS 007 were published in 2010 and 2011 and are to be used when doors are at risk of cylinder attack and may be a requirement by some authorities. Cylinders that are Sold Secure Diamond rated have been subject to an extensive attack test and offer a significant security upgrade to any door that requires a Euro cylinder. The Master Locksmiths Association recommends that for retro fit security upgrades, SS312 Diamond cylinders should be used as a cylinder change only solution or a TS 007 one star rated cylinder combined with a two star rated handle or a TS 007 three star rated cylinder (either TS 007 solution must achieve a total of three stars to be effective against attack).

- (c) Where any cylinder operated lock is used, the outside cylinder shall not protrude more than 3mm from the face of the door or the lock furniture (handle plate or cylinder rose) where fitted. Lock furniture should be of the 'bolt through' type with the fixings being secured from the internal side only. Lock furniture should comply with BS EN 1906 Lever handles and knob furniture – Requirements and test methods – Annex A: Requirements for security lock furniture for use on burglary resistant doors – Grade 1 unless certified as a component of a door assembly satisfactorily tested to PAS 24. Lock furniture may consist of separate components of lever/knob handles on roses and cylinder roses or composite backplates. Where cylinder roses are fitted, these must provide the cylinder protection as required under BS 3621, BS 8621 or BS 10621.
- (d) A limited range of other door locks, and most types of lockable bolt or window locks, are likely to be acceptable to insurers for the purpose of securing doors and windows. A proposed (issued in 2013) guidance document on Minimum Security Standards for Domestic Properties will provide full details. This will be available for download from www.riscauthority.co.uk.

4. HINGED DOOR SECURITY

The type of lock and the position to which it is fitted on the door is dictated by the design of the door. It is therefore not possible to make specific recommendations regarding the fixing positions of additional security devices, as this will be determined by the position of the original fittings on the door. The height at which the lock is fitted might also be determined by the level at which the user is standing when locking or unlocking the door, e.g. one or two steps below the door entry level.

For specific guidance reference should be made to BS 8220 Guide for security of buildings against crime – Part 1:200 Dwellings. However, the following is offered as a general guide:

4.1 Additional Mortice Deadlocks

Where the lock to be fitted is of the mortice type, the minimum thickness of the door to which it is being fitted must be 44mm. The lock should be fitted approximately midway between the existing lock and the top or bottom of the door depending on which has the greatest unsecured distance, avoiding any cross rail or glazing bar joints.

4.2 Additional Mortice or Rim Security Bolts (Single Doors)

To be fitted horizontally (where possible) approximately midway between the top lock and the top of the door and the bottom lock and the bottom of the door.

Where a single lock conforming to the requirements of the insurance company is fitted, the additional bolts should be fitted approximately midway between it and the top and the bottom of the door.

Where bolts are fitted vertically they should be between 50mm and 100mm from the edge of the door, avoiding any joints.

For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts. Where doors do not form part of an escape route, loose key mortice bolts are suitable.

4.3 Additional Mortice or Rim Security Bolts (Double Doors)

To be fitted vertically to the top and bottom of the doors between 50mm and 100mm from the front of the rebated edge of the door, avoiding any joints. It could be necessary to fit security bolts to the top and bottom of the first closing leaf only, if the doors are of substantial construction.

For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts on the first opening leaf, the first closing leaf being secured by loose key bolts. Where doors do not form part of an escape route loose key mortice bolts are suitable for both leaves.

4.4 Hinge Bolts and Security Hinges

Hinge bolts shall be fitted to all outward opening doors at a position of approximately a quarter of the door height from the top and bottom of the door, but not within 150mm of the top or bottom hinges.

Hinges for use on burglar-resistant doors should comply with BS EN 1935:2002 Annex C. These may comprise either such a design that the hinge pin can only be removed when the door is open, or alternatively, suitable composite security hinges incorporating hinge bolts within the hinge flap that enable the hinge to withstand shear loads should be considered.

4.5 Letter plates and boxes

Letter plates fitted to doors could comply with BS EN 13724: Postal services. Secure letter plates and boxes can be tested to TS 008: 2022 and TS 009: 2019 TS 008 is quoted in PAS 24 and prevents invasive attack such as fishing.

4.6 Stable Doors

Both halves of stable doors must be treated as separate doors.

5. WINDOW LOCKS

Where windows are not required to be opened, they may be screwed permanently shut. Security screws shall be used where this is to be done from the outside, and the heads countersunk and plugged.

The security of all ground floor and all accessible windows which are not considered as means of escape (e.g. from a flat roof) shall be considered. Opening windows that are over 600mm high or wide should be fitted with a multi-point locking system or two window locks with removable keys. Sashes less than 600mm need only be fitted with a single lock.

Where a lock is to be fitted to a window care must be taken to ensure that the material to which the lock is fitted does not become weakened by fitting it too close to existing fittings.

Where a window is required for emergency egress then it shall not be fitted with any type of key lockable system. In this instance the window should be fitted with laminated glass.

5.1 Louvre windows

Urgent consideration should be given to replacing louver windows as it is difficult to achieve adequate security. If this is not possible, then all panes of glass (in louver windows) should be securely fixed, with suitable adhesive, into their brackets or suitable grilles, bars, or shutters fitted. Louvre windows should not be installed in vulnerable locations. The use of plastic frame materials is not acceptable for a security application.

5.2 Casement Windows

Where the casement window opening exceeds 600mm, two locks are required. For side-hung casements windows over 600mm high the additional locks should be fitted approximately quarter of the height from the top and bottom of the casement window. For top- or bottom-hung fanlights in excess of 600mm wide, the locks should be fitted approximately one quarter of the width of the opening fanlight from either side of the sash.

5.3 Tilt/Turn Windows

Additional locks should be fitted to the bottom rail at the leading edge for security and also to prevent the accidental opening of the window in the side hung mode.

5.4 Vertical Sliding Sash Windows

Where the window opening exceeds 600mm, the locks should be fitted on the meeting rail of the bottom sash, at approximately one quarter of the width, or on the vertical frame either side of the upper sash, directly above the meeting rail of the bottom sash.

Where there is a requirement for ventilation when the premises are occupied, vertical sliding sash windows can be provided with restricting devices suitably placed to provide a ventilation position, to allow them to be opened a maximum of 100mm and remain secure. This is not recommended when the premises are unoccupied. The window should then be secured in the fully closed position.

6. SLIDING DOORS AND WINDOWS

All sliding doors and windows should be fitted with anti-lift devices to prevent them being removed from their tracks. Care should be taken to ensure such devices are fitted appropriately so that they do not go inside the section of the frame when the door/window is closed. Some sliding door locks have an in-built facility to prevent the door being lifted, e.g. swing hook bolts which rotate upwards to engage.

Additional locks fitted to sliding doors and windows should be fitted in such a manner as to ensure any force applied to open the door acts against the lock fixing screws.

Wherever possible, additional locks should be fitted to the top and bottom of the interlock of sliding doors and windows. However, there are some designs, which make this impractical.

Sliding doors/windows should not be secured in the ventilation position when the premises are unoccupied.

7. UP-AND-OVER DOORS

Work on improving the security of up-and-over doors should be undertaken by professionals who have experience in this type of work.

There are security locking products available for this type of door and the advice of a professional (MLA Member) should be obtained prior to commencing improvements.

8. FRAME FIXING

It could be necessary in some instances to improve the strength of the fixings holding door or window frames to the fabric of the building. Due to the presence of pre-cast concrete, steel lintels or other construction details, it might not be possible to achieve the desired additional fixings to the head or sill of the frame. The type of fixings used will be determined by the material to be fixed and the material to which it is to be fixed, however frame-fixing screws and bolts are available for this purpose.

The following dimensions for the positions of additional fixings are offered as a guide.

continued overleaf

8.1 Corner Fixings

Additional fixings made between 150mm and 250mm vertically and horizontally from the internal corners of the frame to be fixed.

8.2 Vertical and Horizontal Fixings

Additional fixings made at approximately 600mm centres between the corner fixings of the frame to be fixed.

For greater detail of improved fixings, reference should be made to **BS 8213: Part 4:2016 Windows, doors and roof lights – Code of practice for the installation of replacement windows and doorsets in dwellings**.

9. GLASS AND GLAZING

As far as security is concerned the main consideration is the ease with which glass can be broken to provide access to window or door hardware. The glazing specification chosen should meet the design and performance requirements of **BS 6262:2018 Part 4 Glazing in buildings – Safety related to human impact**. For those installations where a higher degree of “security” is needed the glazing should be in accordance with **BS 5357:2007 Code of practice for installation of security glazing**.

There are three main types of glass. These are:

9.1 Annealed glass

Annealed glass consists of, float, sheet, cast (patterns) and wired glass. It breaks easily and when broken forms large sharp fragments. While wired glass can be fractured, it will act as a barrier but only until the wire mesh in the glass is sheared.

The application of an appropriate plastics film can increase the resistance of annealed glass to penetration.

9.2 Toughened glass

Toughened glass, (tempered glass), is an annealed glass, except wired glass, that has been subjected to a heating and rapid cooling process that imparts a greater strength to the material. It is resistant to impact by blunt objects but can be fractured by penetration of the surface compressive layer. When fractured, the glass will not act as a barrier. In buildings it is usually found in ‘risk areas’ which include doors and adjacent windows, low windows, bathrooms, landings etc. Typically toughened glass is around eight times stronger than annealed glass but when it breaks it forms a multitude of small fragments. It is also vulnerable to breakage with a sharp point such as a centre punch.

Due to the method in which it breaks, toughened glass offers very little security. Its value is as a safety glass.

9.3 Laminated glass

Laminated glass consists of two or more layers of annealed glass bonded together by means of transparent plastic (poly vinyl butate - PVB) interlayers. When the glass is attacked the glass layers fracture but remain in place, held by the PVB interlayer. Thus laminated glass offers both increased security and safety over annealed glass. Typical laminated glass found in domestic buildings consists of two layers of glass and one interlayer to a total thickness of 6.4mm (soon to increase to 6.8mm). However, the number of glass layers and interlayers can be increased to provide enhanced security such that, eventually, bullet-proof glass can be produced.

The most common failure mechanism of laminated glass is for it to ‘balloon’ and fall out of the frame under repeated impacts. However, the time taken for this gives an enhanced level of security over other types of glass.

9.4 Double glazing

Double glazing can be in the form of:

1. **Insulating glass units** i.e. two or more panes of glass hermetically sealed at their perimeter. These provide the intruder with two or more panes to break.
2. **Double windows** i.e. two separate single glazed windows in the same opening. These assemblies provide a similar deterrent but only if the inner window is secured.

9.5 Plastics glazing material

Plastics glazing sheet material consists of either a single sheet or combination of sheets laminated together. The performance of these materials is dependent on the polymer type, thickness, and support condition. The advice of the manufacturer should be sought in respect of their security and fire resistance performance, as appropriate.

9.6 Glazing

All glass or plastics glazing sheet material should be secured to the window or door structure in such a manner that it cannot be easily removed from the outside.

10. GLOSSARY

Anti-lift device – Device which prevents a door or window from being lifted in its aperture, where this lifting would decrease the effectiveness of a lock or enable the door/window to be removed.

Barrel bolt – Surface mounted fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening. The shoot is provided with a knob, loose key or similar for operation by hand.

Bolt (1) – Movable part of a lock or latch that usually engages a component fixed to a frame and is withdrawn into the case.

Bolt (2) – Fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the sliding part being provided with a knob, loose key or similar for operation. It may be surface mounted, or morticed.

Certified – A product subjected to a testing and ongoing audit programme by a MLA approved organisation.

Deadlock – Lock that contains only a deadbolt.

Escape lock – Deadlock that can be opened (even when locked) from the inside by a single action without use of a key.

Escutcheon – Surround with a shaped hole, with or without a pivoted cover plate, primarily to protect the door leaf from abrasion damage caused by key insertion. This could be for decorative purposes or to increase the security of the locking device.

Flush bolt – Recessed (flush) fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the moving part being provided with a lever, slide bar or knob.

Hasp and staple – Two-piece fastening for doors which can be secured by a padlock. The hasp could be attached to a fixed or swivel bar.

Hinge bolt – Fixed projection on the hinge side of the door or window. The projection engages into a keep when the door or window is closed. Also known as dog bolt.

Latch – Self-engaging device, usually operable from both sides, which holds a door or window in the closed position and is released by hand without the use of a key.

Lock – Fastener that combines within one case a latch operated by a handle and a deadbolt which secures the door or window in the closed position.

Mortice lock/bolt – Lock/bolt where its body is fitted in a mortice cut into the closing edge of the door or window.

Multi-point lock – Lock that has a latch bolt and a number of other bolts positioned remote from the lock case but connected by rods, which are thrown by means of a single action.

Night latch – Latch with a single bevel latch bolt that is operated internally by a knob and externally by a key which automatically engages when the door is shut.

Night vent or ventilation position – Position in which the door or window can be secured whilst slightly ajar. This usually offers only limited security.

Padbar – A device spanning the full width of the door opening with supporting brackets or staples fixed to the frame and secured by a padlock.

Padbolt/padlock bolt – Door bolt which can be secured in the locked position by means of a padlock.

Rim lock/bolt – Lock/bolt for fixing on the face of a door or window.

Security bolt – Mortice or barrel bolt which can only be withdrawn by the use of a key.

Security screw – Screw designed so that it either cannot be removed when fixed or which requires a restricted access tool to remove it.

Strike plate – Flat metal plate, appropriate to the latch or lock, fixed to a frame to engage a bolt(s).

Throw – bolts with linear movement – Distance that the dead bolt travels from the fore end of the lock in an outward direction under the action of a key, measured perpendicular to the fore end.

Throw – hook bolts with arcuate movement – Distance from the tip of the bolt travels from the unlocked to the locked position measured parallel to the fore end of the lock.

11. STANDARDS

The following standards are referred to in the text. The latest version of the standard shall be used.

- **BS 3621** – Lock assemblies operated by key from both inside and outside the door.
- **BS 5357** – Code of practice for installation of security glazing.
- **BS 5544** – Specification for anti-bandit glazing (glazing resistant to manual attack).
- **BS 6206** – Specification for impact performance requirements for flat safety glass and safety plastics for use in buildings.
- **BS 6262** – Part 4 Glazing in buildings – Safety related to human impact.
- **BS 7950** – Specification for enhanced security performance of casement and tilt/turn windows for domestic applications (now found in PAS 24).
- **BS 8213-4** – Windows, doors and roof lights Part 4. COP for the installation of replacement windows and doorsets in dwellings.
- **BS 8220-1** – Guide for security of buildings against crime – Part 1. Dwellings.
- **BS 8607** – Mechanically operated push button locksets.
- **BS 8621** – Lock assemblies operated by key from the outside of the door and by handle or thumb turn from the inside of the door.
- **BS 10621** – Lock assemblies in which the operating mode can be switched between the normal BS 3621 operating mode and a secure mode in which no egress is possible.

- **PAS 24** – Enhanced security performance requirements for doorsets and windows in the UK.
- **PAS 3621** – Multi point locking assemblies – keyed egress.
- **PAS 8621** – Multi point locking assemblies – keyless egress.
- **PAS 10621** – Multi point locking assemblies – dual mode.
- **BS EN 12209** – Building hardware – locks and latches.
- **BS EN 1303** – Building hardware – cylinders for locks.
- **BS EN 1906** – Building hardware – lever handles and knob furniture.
- **BS EN 1935** – Building hardware – single-axis hinges.
- **BS EN 12320** – Building hardware – padlocks and padlock fittings.
- **BS EN 13724** – Postal services – apertures of private letter plates.
- **SS 301** – Sold Secure Specification for Mechanical Security Systems for Domestic Dwellings.
- **SS 306** – Sold Secure Specification for Mechanical, Domestic Door Security Systems.
- **SS 312** – Sold Secure Specification for Cylinders for Locks.
- **SS 323** – Sold Secure Specification for External Perimeter Fencing and Gates.
- **SS 504** – Sold Secure Specification for Smart Locks in use within Domestic and Similar Buildings.
- **DHF TS 621** – Thief resistant electromechanically operated lock assemblies.
- **DHF TS 007** – Enhanced Security Performance Requirements for Replacement Cylinders and/or Associated Security Furniture.
- **DHF TS 008** – Letter plates Enhanced security and general requirements for letter plate assemblies and slide through boxes.
- **DHF TS 009** – Letter boxes Enhanced security and general requirements for letter box assemblies that are free standing or surface mounted and where mail is retrieved from the same side as delivery.

APPENDIX A

Hardware required to be fitted (as listed in Appendix B)

Hinged final exit door	A plus B, C or D, or T
Other single hinged external doors	A plus B, C or D, plus L (2 off), or T
Pedestrian doors on garages and domestic outbuildings	A plus B, C, D or V, or T
Double doors (1st closing door)	A plus L (2 off) or M (2 off)
Double doors (2nd closing door)	A plus B, J or N
Sliding doors	E plus F C, G, or H
Louvre windows	See text
Accessible windows and ground floor openings (But not emergency egress windows)	L, P, Q, S or U A sash less than 600mm in width or height requires a minimum of one locking point. For all other sashes a minimum of two locking points is required

continued overleaf

APPENDIX B

Specification of acceptable hardware

A)	All doors	Hinge bolts or security hinges with protection from hinge pin removal on all outward opening doors.
B)	All doors	A lock certified to BS 3621, BS 8621 and BS 10621 together with its approved striking or box plate and accessories as tested.
C)	All doors	An acceptable alternative lock with the lock manufacturers approved striking or box plate and accessories as approved by the Insurers.
D)	Single door pedestrian garage doors	A multi-point lock system with a minimum of three horizontal locking points with a central bolt (minimum throw 13mm) and two dead or hook bolts (minimum throw 20mm). All locked simultaneously by one operation of the key. Alternatively a multi-point lock certified to Sold Secure specification SS 306 or PAS 3621.
E)	Sliding	Anti-lift devices.
F)	Sliding	Main locking system plus key operated patio door lock or security bolts (minimum throw 9mm) at the interlock at bottom of the door and if practical at the top of the door. Alternatively a patio bar.
G)	Sliding	A hook lock certified to BS 3621 or BS 8621 together with its approved striking plate and accessories as tested.
H)	Sliding	A multi-point lock system with a minimum of three horizontal locking points Incorporating hook bolts (minimum throw 20mm) and/or vertical shoot bolts (minimum throw 14mm) locking into the head and sill of the door frame. All locked simultaneously by one operation of the key. Alternatively a multi-point lock certified to Sold Secure specification SS 306.
J)	Double doors – 2nd closing leaf (casement doors)	The main locking system plus two key-operated rim or mortice security bolts (minimum throw 14mm).
L)	Double doors – 1st closing leaf (casement doors) windows	Two key operated rim or mortice security bolts (minimum throw 14mm).
M)	Double doors – 1st closing leaf	Two flush bolts (minimum throw 14mm) mounted on door edge and concealed when doors are closed.
N)	Double doors – 2nd closing leaf	A multi-point lock system with a minimum of three locking points with a central bolt (minimum throw 13mm) and two dead or hook bolts locking into the head and sill of the door frame (minimum throw 14mm). All locked simultaneously by one operation of the key. Or a multi-point lock certified to Sold Secure specification SS 306.
P)	Windows	A window lock with removable key.
Q)	Windows	A substantial locking handle with removable key.
S)	Windows	A multi-point locking system with removable key.
T)	Doors	A door-set certified to PAS 24.
U)	Windows	A window certified to PAS 24.
V)	Doors to outbuildings	A heavy duty padbar bolted to the door and frame and fitted with a padlock and fittings certified to EN 12320 Grade 3.

APPENDIX C

Accredited products and services can be found at: www.securedbydesign.com www.kitemark.com

Other security related products including padlocks and out-building security products at: www.soldsecure.com

Accredited products can be specified by your local MLA member. You can find a local member by visiting: www.locksmiths.co.uk

MLA CODE OF PRACTICE.

OBJECTS

The Objects of the Association shall be as stated in the Memorandum and Articles of the Association.

The following is a summary of some of these objects:

- a) To watch over, protect, preserve, promote and represent persons, firms or bodies concerned or interested in the locksmithing industry.
- b) To watch over, protect, preserve and promote the heritage and history of the locksmith industry through the creation of a lock museum and archive.
- c) To advance education and training of persons preparing for entering or engaged in the trade.
- d) To agree standards of conduct, practice and materials.
- e) To maintain a high standard by members for the protection of the public at large.
- f) To enable the Association to attain a recognised status.
- g) To prescribe, regulate and conduct examinations and to charge fees, award qualifications.
- h) To carry on business as technical locksmiths, security consultants, specialist wholesalers, retailers and dealers in locksmithing tools, equipment and members' services.
- i) To apply for, purchase or otherwise acquire patents and licences.
- j) To produce, publish and distribute a journal.
- k) Co-operate with any body for the purpose of promoting the association.
- l) To purchase or lease property and/or rights for the purpose of the association.
- m) To do all such other things as are incidental to the attainment and furtherance of the said objects or any of them.

CODE OF ETHICS

To assist the achievement of the above Objectives, each member of the Association, by their acceptance and continued membership thereof, shall be deemed to have subscribed to the following:

- 1) To pursue their activities, conforming to professional standards and maintaining high ideals of personal honesty and integrity.
- 2) To abide by the policies and codes of practice of the Association, as established from time to time.
- 3) To analyse impartially and to the best of their ability, security problems receiving their attention and to advance the best possible solution for the protection of his clients.
- 4) To conduct themselves in a dignified manner and to refrain from using improper or unprofessional methods in furthering his business.
- 5) To co-operate in advancing the best interests of the locksmithing and keycutting industry, always ready to apply his special knowledge, skill and training for the use and improvement and betterment of his profession.
- 6) To encourage and promote loyalty in their profession by acting in a fair, reasonable and business- like manner in any dealings, especially those with any fellow member.

MLA Approved Companies' management and staff should provide products and services with skill and integrity. They should give all end-users the benefit of their experience in all aspects of security products and their applications.

ABOUT MLA APPROVED COMPANIES.

MLA APPROVED COMPANY SECTOR

The Master Locksmiths Association was first conceived in 1957 and was the idea of the Chubb Lock Company, and one or two London locksmiths. The prime mover was Mr Steve Fallshaw, then a locksmith in the Barbican, who became its first Chairman when it was formally founded early in 1958. The original 16 members decided the new 'association' should be known as The Greater London Master Locksmiths Association (GLMLA).

By the end of the first decade it had grown nationally with a wide distribution of members from all parts of the UK. At this time, it elected its first national President, namely Mr Steve Stephens of Oxford. The association by now included members from overseas and a healthy growth has been maintained, we now number almost 1500 members in all sectors. In the early '90s the association restructured to meet modern demands, retaining its title Master Locksmiths Association (MLA) it formed three main sectors: Personal Membership (for individual members wanting personal accreditation), Approved Company Membership (for trading locksmith companies meeting the high criteria stipulated by the association), and Affiliate Members (suppliers to the locksmith industry).

AIMS OF THE APPROVED COMPANY SECTOR

Companies and locksmiths trading in their own right, with retail premises or operating as a mobile locksmithing business, join the MLA Approved Company sector. It is this sector of the Association that trades directly with the public and private sectors in the High Street and through directories, and other advertising media.

The Approved Companies inspectorate means the MLA can demonstrate that all company members are meeting high standards. Each company is inspected on a regular basis, thus ensuring that its members and their operatives maintain standards in workmanship and administration. Also, members are expected to conform to legal requirements and that customer charters exist to service customer satisfaction.

Inspections have the effect of making locksmithing companies more accountable for their daily operations. Approved Company members are made aware that the MLA considers that training is also a valuable means to maintaining standards. Training is offered at the purpose built, state of the art training facility at the MLA's Head Office in Rugby.

Continued growth of the Approved Companies ensures that the MLA can offer a national network of locksmiths and the Association's head office in Rugby refers enquirers to their nearest approved company.

The logo depicted above is the one that is advertised by an approved company on their premises, vehicles and stationery, confirming to the public the standards expected of them.

Channels of arbitration exist to fully investigate any complaints or disputes, should they arise, and the MLA advises or takes any necessary action. The Board of Directors continually looks at consumer matters and advises members when appropriate.

The Approved Company sectors operates schemes whereby discounts may be available to policyholders of most well known insurance companies and they provide the service behind many major helplines.
